GF Piping Systems

Your global system provider

We are dedicated to designing, manufacturing and marketing piping systems for the safe and secure conveyance of liquids.

Customer Support

In choosing Georg Fischer, you can be assured of excellent customer service through our extensive network of distributors located throughout the world. Our staff are well qualified to assist you in every aspect of product selection thus assuring you of the right solution for your liquid control needs.

GF Quality, Sustainability and Security by Design

Quality Management: Our systems and products undergo rigorous testing in accredited test laboratories, and our management and production procedures are certified to ISO 9001, ISO 14001 and OHSAS 18001 through ensuring that the systems and products we provide are fit for the purpose, and may be used reliably throughout the world.

GF Values

We put customers first

- Customer needs guide our product development
- We offer customer support and training worldwide
- We measure your satisfaction

We act fast

- Local presence worldwide
- Superior logistics
- Speed in all details

We do what we say

- Tested quality
- Always trustworthy

We reward performance

- We benchmark ourselves against the best

We respect people

- We value all contributions

New Products and Product Upgrades

9950 Dual Channel Transmitter

Top Features

- One instrument for multiple sensor types
- Multiple language support for Simplified Chinese, English, French, German and Spanish
- Two different sensor types can be combined in one instrument
- Configurable display
- Relay Modules available with 2 or 4 relays and optional binary inputs
- Single channel Direct Conductivity/Resistivity module available
- Two, passive, 4 to 20 mA current loop outputs in base unit
- Dual Channel 4 to 20 mA current loop modules available to expand to 4 or 6 loop outputs
- USB Port for Field Upgrades using standard USB Flash Drive

Ideal for

- Wastewater Treatment
- Reverse Osmosis
- Deionization
- Chemical Manufacturing/Addition
- Metal and Plastic Finishing
- Cooling Tower
- Media Filtration

9900 Transmitter (Generation IV)

Modbus Module

Top Features

- Modbus Module supports RS485 Serial Modbus Communications
- Multiple sensor types supported with one instrument
- Large auto-sensing backlit display with large characters, "dial-type" digital bar graph, relay and warning LEDs for at-a-glance monitoring
- Field replaceable plug-in modules
- Customize process label, dial settings, units and decimals
- 4 to 20 mA Output Module adds second output to a 9900 SmartPro Transmitter
- Customizable features including digital label for custom identification

Ideal for

- Wastewater Treatment
- Reverse Osmosis
- Deionization
 - Ultra Pure Water
 - Two Bed System
 - Mixed Bed System
- Chemical Manufacturing / Addition
- Metal and Plastic Finishing
- Media Filtration
- Batch operation with optional batch module or 9900-1BC batch system

The following is a brief overview of the new products and product upgrades you will find in this catalog. For more details, please refer to the individual product pages.

2751 DryLoc® pH/ORP Smart Sensor Electronics

Top Features

- Probe health monitoring, glass impedance and broken glass detection
- Memory chip interface that allows for transferable calibration, runtime data, and manufacturing information
- In-line integral mount and submersible installation versions
- Automatic temperature compensation
- Auto configuration for pH or ORP operation

Ideal for

- Cooling Towers
- Fruit and Vegetable Washing
- Water Distribution
- Wastewater Odor Control
- Poultry and Meat Processing
- UPW Treatment
- Hospital and Healthcare Facilities

2536 PVC Paddlewheel Flow Sensor

Top Features

- PVC 2536 version DN15 to DN100 (½ to 4 in.) for concentrated Sodium Hypochlorite 12.5% applications
- Operating range 0.1 to 6 m/s (0.3 to 20 ft/s)
- Open-collector output
- Simple, economical design

Ideal for

- Sodium Hypochlorite Transfer/Injection/Batching
- Pure Water Production
- Filtration Systems
- Chemical Production
- Liquid Delivery Systems
- Pump Protection
- Scrubber/Gas Stacks
- Gravity Feed Lines

2290 Non-contact Level Transmitter

Top Features

- 19° beam angle
- Tank mapping function
- Large dot matrix LCD display
- Predefined tank shapes
- Works with fumes, condensation, and light foam layers

Ideal for

- Bulk Storage Tanks
- Day Tanks
- Process Vessels for Mixing and Batching
 - Buffer Tanks
 - Conditioning Vessels
 - Metal or Plastic

2291 Guided Wave Radar Level Transmitter

Top Features

- Measuring range up to 6 m (19.6 ft)
- Accuracy: ± 5 mm (0.2 in)
- Rod & cable versions available
- 2-wire version
- 4 to 20 mA + HART output
- Graphic LCD display

Ideal for

- Inventory Tanks
- Day Tanks
- Process Vessels for Mixing and Batching
- Bypass Applications (requires calibration)
- Stilling-wells

New Products and Product Upgrades

2260 Ultrasonic Level

Top Features

- 2-wire compact transmitters
- Non-contact level metering
- Narrow 5° beam angle
- Fully temperature compensated electronics
- PP or PVDF sensor body provides best chemical resistance

Ideal for

- River Water
- Seawater
- Potable Water
- Demineralized Water
- Treated Water

2270 Ultrasonic Level Sensor

Top Features

- 2-wire compact transmitters
- Non-contact level metering
- Narrow 5° beam angle
- PP or PVDF sensor body provides best chemical resistance
- Compact Housing
- 4 to 20 mA / HART Interface

Ideal for

- River Water
- Seawater
- Potable Water
- Demineralized Water
- Treated Water

2280 Tuning Forks

Top Features

- Maintenance free vibrating principle
- Selectable sensitivity
- Relay or electronic output
- Temperatures up to 130 degrees
- ATEX and WHG approvals

Ideal for

- Potable Water
- River Water
- Cooling Water
- Demineralized Water
- Water/Glycol Solutions

2281 Multipoint Switch

Top Features

- Easy on site probe length configuration
- Up to 4 relays for pump and valve control
- Adjustable sensitivity
- Adjustable delay time

Ideal for

- Potable Water
- Cooling Water
- Chemicals
- Pump Control

2282 Guided Float Switch

Top Features

- Optimized chemical compatibility
- Very compact design
- PP and PVDF version available
- For small tanks

Ideal for

- Cooling Water
- Demineralized Water
- Water/Glycol Solutions
- Chemicals

2284 Ultrasonic Gap Switch

Top Features

- Relay output
- Corrosion resistant PPS body
- 1" and 3/4" threaded mounting
- Small in-tank dimensions

Ideal for

- Cooling Water
- Demineralized Water
- Water/Glycol Solutions
- Chemicals

2285 Level Float Switch

Top Features

- Hermetically molded, double chamber
- Mercury free operated micro switch
- Use for drinking and wastewater

Ideal for

- Tap Water
- River Water
- Sump Shafts

System Selection Guide

This section provides tips and suggestions on how to choose just the right measurement system for your specific liquid application needs. For specific product information, refer to the individual catalog pages.

Note: Please contact your local Georg Fischer sales and support office if you need assistance in choosing any one of these products.

Step 1: Determine Application Requirements

Defining the following variables before building your system will ensure peak performance from your Signet sensors and instruments.

- Measurement range
- Installation requirements
- Pipe size and material
- Chemical compatibility of all wetted parts to process chemicals
- System specifications (such as temperature and pressure)
- Performance requirements of sensor
- Particle and fiber load in fluid
- Viscosity of liquids
- Hazardous location requirements

Step 2: Select Sensor Technology

Based on the application requirements determined in Step 1, choose a sensor.

Determine your signal output requirement to allow you to match just the right instrument (see Step 3). If you're not purchasing an instrument, select the sensor electronics package that best suits your needs.

Step 3: Choose Instrument

Choose an instrument. Instruments are available in ¼ DIN size and offered in panel mount configurations. Field mount versions are also offered for certain models. Instruments are available with either digital, analog, or analog/digital display. Various retrofit adapters and mounting accessories are also available (see Accessories section). In cases where the sensor feeds directly to a PLC or PC system, GF offers a wide range of instruments and sensors with 4 to 20 mA outputs.

Step 4: Determine Installation Requirements

GF offers a wide selection of installation fittings for flow sensors and in-line pH/ORP electrodes. These fittings are specifically designed to ensure the proper placement of the flow sensor in the piping system to achieve optimum performance. Other pH/ORP electrodes as well as all temperature, pressure and conductivity/resistivity electrodes use NPT or ISO standard fittings. All submersion electrodes require conduit piping and fixtures not supplied with unit.

Features and Benefits

Transmitters

Modbus Module

9950 Dual Channel Transmitter:

- One instrument for multiple sensor types
- Multiple language support for Simplified Chinese, English, French, German and Spanish
- Two different sensor types can be combined in one instrument
- Configurable display
- Relay Modules available with 2 or 4 relays and optional binary inputs
- Single channel Direct Conductivity/Resistivity module available
- Two, passive, 4 to 20 mA current loop outputs in base unit
- Dual Channel 4 to 20 mA current loop modules available to expand to 4 or 6 loop outputs
- USB Port for Field Upgrades using standard USB Flash Drive

9900 Transmitter (Generation IV):

- One unit can replace ProPoint® and single-channel ProcessPro® instruments, dramatically reducing part numbers and inventory levels
- Large auto-sensing backlit display for indoor/outdoor “at-a-glance” visibility with
 - “Dial-type” digital bar graph
 - Relay and Warning LEDs
- Multiple and time based relay modes
- Derived functions allow for sum, difference and ratio of similar measurements
- Reverse Osmosis efficiency calculations using two flow or conductivity measurements
- Optional plug-in modules to adapt to customers' changing needs
 - **Batch Module:** Add a batch and relay module to convert a 9900 Transmitter (Generation II) to a batch controller
 - **Relay Module:** Adds two programmable dry contact relays
 - **Direct Conductivity/Resistivity Module:** Interfaces Conductivity/Resistivity and Salinity electrodes directly to the 9900 transmitter
 - **4 to 20 mA Output Module:** Adds a second 4 to 20 mA output to the 9900 Transmitter (Generation III and later)
 - **H COMM Module (HART®):** Enables two-way communication and access to additional information beyond the normal process variables
 - **Modbus Module:** Access Primary and Secondary readings, sensor status, engineering units via RS485 Modbus
 - **0252 Tool:** Enables configuration and programming from a PC
- Customizable features
 - Label: Customize identification of the unit
 - Bar Graph (Dial): Adjust min. and max. settings
 - Units and decimals
- Built-in 4 to 20 mA and open collector outputs (standard)
- 4 to 20 mA Output Module adds second output to a 9900 SmartPro Transmitter
- Outputs can be used for Primary or Secondary measurements
 - Primary – Flow, Conductivity, pH, etc.
 - Secondary – Temperature and Volume

9900 Transmitter Accessory

Rear Enclosure:

- Designed to fit onto 9900-1P Panel Mount Transmitters (Compatible with all Generations of 9900-1P)
- Two models available
 - Hinged Cover for Wall Mount and Pipe Mount Installations
 - Flat Cover for Panel Mount Installation

Communication products

0486 Profibus Concentrator:

- Interface six Signet blind sensor or relay modules and a proportional valve to a Profibus network with a single device
- Four Channels support (S³L) or flow frequency devices two channels support (S³L) or 4 to 20 mA current loops
- Convenient DIN Rail or surface mountable enclosure

0252 Configuration Tool:

- Back up and restore SmartPro[®] Transmitters and blind sensors configurations to a computer file
- User-friendly interface
- Configure settings such as instrument type, units, scale 4 to 20 current loops and modify labels from the computer
- Use a single file to clone multiple SmartPro[®] Transmitters and blind sensors
- Red and blue LED indicators for power and data

Systems

4632 Chlorine Dioxide Analyzer System:

- Reagent free measuring
- Complete panel system allows for quick and easy installation
- Built-in flow regulator maintains constant flow and pressure to the sensors
- Pre-wired panel includes a 100/240 VAC power supply
- Two 4 to 20 mA outputs and two mechanical relays

Features and Benefits

Flow sensors

2536 Paddlewheel Flow Sensor

PVC version

2540 Stainless Steel Paddlewheel Flow Sensor

2507 Mini Flow Sensor

2100 Turbine Flow Sensor

Insertion Paddlewheel Sensors:

- Four-bladed paddle design ensures optimal performance and lower flow rates than five or six-bladed rotors that have a higher weight/bearing inertia.
- The open-cell design and the controlled insertion depth work together to deliver a linear and repeatable output over a wide dynamic range, with virtually no pressure drop in the process pipe.
- Choice of corrosive resistant plastics and rugged metals enable use in many aggressive fluids.
- NIST traceable test certification with all -X0, -X1 plastic sensors provides superior price-to-performance.
- The widest choice of installation fitting materials, sizes and connections on the market that meet endless application needs.
- Insertion design lowers installation and maintenance costs.
- Self-powered sensors are well suited for remote locations.
- Paddlewheel design has barely measurable pressure drop, making it ideal for gravity flows.
- Hot-Tap designs are available to allow service and maintenance without shutting-down the process; saves costly downtime.
- Selected models are NSF and Lloyds Register approved.
- PVC 2536 version DN15 to DN100 (½ to 4 in.) for concentrated Sodium Hypochlorite 12.5% dosing application in water treatment

Flow-Through Rotor Sensors:

- Operating flow ranges from 400 mL/min to 12,000 mL/min (0.01 US gpm to 3.2 US gpm) in clean opaque or clear liquids ideal for precise low flow applications such as dosing.
- Hall-effect devices provide excellent noise immunity output signals.
- Sensor body design allows easy access for cleaning, inspection and rotor replacement without the need for powering down.
- Flexibility with end connections allow flexible tubing or rigid pipe installations.
- Four fully encapsulated magnets provide high resolution signal output.

In-line Turbine Sensors:

- Small compact design for tightly spaced installations.
- Superior ceramic bearing provides long life without the need for maintenance.
- Detachable electronics means sensor maintenance is possible without the need to cut power to unit.
- Composed of highly chemical resistant materials.
- Wide selection of end connections in hose barb or union ends.
- Two flow ranges available for optimum measurement resolution.
- NIST traceable test certification included.

2551
Display Magmeter

Insertion Magmeter Sensors:

- No moving parts.
- Insertion design provides easier installation and removal than full line magmeters.
- Model 2551 fits pipe sizes ranging from DN15 to DN900 (½ to 36 in.).
- Fluid diagnostics via LED indicators.
- Bi-directional flow and empty pipe detection.
- Rugged design with good chemical resistance suitable for tough applications.
- Available with a choice of analog 4 to 20 mA or digital (S³L) / frequency outputs provide signals to remote flowmeters and data acquisition. Also available with digital (S³L) output for compatibility with Multi-Parameter Instruments.
- High input impedance provides low sensitivity to coating which makes it ideal for dirty liquids.
- Isolated outputs provide barrier to help prevent “ground loops.”
- NIST traceable test certification included.
- Selected models are NSF and Lloyds Register approved.

2552
Metal Magmeter

Hot-Tap Magmeter Sensors:

- No moving parts.
- Insertion design provides easier installation and removal than full line magmeters.
- Model 2552 Metal Magmeter available for pipe sizes up to DN2550 (102 in.).
- Hot-Tap design allows for installation into full, pressurized pipes.
- Fluid diagnostics via LED indicators
- Bi-directional flow and empty pipe detection.
- Analog 4 to 20 mA and frequency outputs provide signals to remote flowmeters and data acquisition. Also available with digital (S³L) output for compatibility with Multi-Parameter Instruments.
- High input impedance provides low sensitivity to coating which makes it ideal for dirty liquids.
- Isolated outputs provide barrier to help prevent “ground loops.”
- NIST traceable test certification included.

Portaflow
330

Portaflow 220 / 330:

- No moving parts.
- Sensor is not in contact with the liquid. No contamination of sensor and/or liquid.
- Easy, fast clamp-on installation.
- Large, easy to read graphic display with backlighting.
- Transducers and flexible guide rail covers a wide range of pipe sizes.
- Rechargeable battery for up to 20 hours of mobile operation.
- Integrated data logger for 198k data points.

Ultraflow
U3000

Ultraflow U3000 / U4000:

- No moving parts.
- Sensor is not in contact with the liquid. No contamination of sensor and/or liquid.
- Easy, fast clamp-on installation.
- Large, easy to read graphic display with backlighting.
- Transducers and flexible guide rail covers a wide range of pipe sizes.
- Integrated data logger for 198k data points.

Features and Benefits

Temperature, Pressure, Level and Analytical sensors

2350
Temperature
Sensor

Temperature Sensors:

- Unibody PVDF construction for use in either high purity or aggressive fluid conditions.
- Choice of output, 4 to 20 mA or digital (S³L) signal for long cable runs.
- Dual threaded ¾ in. NPT for easy installation.
- Easily converted to an integral system to mount a 9900 transmitter.
- Easily converts to allow the sensor to be used as a submersible solution in an open or closed tank.
- Cable end threads permit conduit for full tank submersion.

2450
Pressure
Sensor

2250
Level
Sensor

Pressure/Level Sensors:

- ½ in. male union process connection to suit installation needs.
- Three pressure ranges to meet specific requirements and provide optimal resolution.
- Choice of output, 4 to 20 mA or digital (S³L) signal for long cable runs.
- NIST traceable test certification included.
- Easily converted to an integral system to mount a 9900 transmitter.
- Configure with 9900 transmitter to provide full level measuring system (hydrostatic pressure).
- 2250 allows the sensor to be used as a submersible solution in an open or closed tank.
- 2250 is provided with a ¾ in. union connector to add a conduit for full tank submersion.

2290
Non-Contact
Radar Level
Transmitter

2291
Guided
Wave Radar
Level
Transmitter

Radar Level Transmitters:

- 19° beam angle
- Tank mapping function
- Large dot matrix LCD display
- Predefined tank shapes
- Measuring range up to 6 m (19.6 ft)
- Accuracy: ± 5 mm (0.2 in)
- Rod & cable versions available
- 4 to 20 mA + HART output

2818-2823
Series Sensors

Conductivity/Resistivity Electrodes:

- Flow-through design ensures continuous measurement without air entrapment.
- Reversible threaded connections for in-line integral mount or tank submersion.
- Standard parts offer application flexibility for the user.
- Every sensor uses standard electrical cable. No need to incur additional costs for "patch" type cable connections.
- NIST calibration certificate available upon request.

2610 Process
Optical Dissolved
Oxygen Sensors

Dissolved Oxygen Sensor:

- Optical DO measurement no flow requirements.
- Rugged construction.
- Calibration built into the measurement cap 2% of range 0 to 20 mg/L.
- Two year measurement cap life.
- No membranes or filling solutions.
- Flexible communications digital (S³L), 4 to 20 mA or Modbus.

2850
Sensor and
Electronics

Universal
Mount

Conductivity/Resistivity Sensor Electronics:

- Blind 4 to 20 mA output or digital output for long cable runs beyond 30 m (100 ft) ensures a steady process signal resistant to electrical noise.
- EasyCal calibration automatically recognizes standard calibration solutions.
- Designed to be used with all Signet conductivity/resistivity electrodes.
- NIST traceable test certification included.

Standard pH/ORP Electrodes:

- Patented reference design for exceptional performance
- 3/4" NPT or ISO 7/1-R 3/4 threaded sensors for use with reducing tees DN15 to DN100 (1/2 to 4 in.)
- Designed to mount in standard Signet fittings 1/2 in. to 4 in. or a variety of 3/4 in. fittings.
- Special design allows for installation at any angle, even inverted or horizontal
- PTFE Reference Junction resists fouling and chemical attack (273X only)
- Longer reference path and larger reference volume means extended service life.
- Flat glass surface sensor design. Resistant to fouling and abrasion in dirty applications, and prevents accidental damage to extend electrode life.
- NIST traceable test certification included.
- 2724-2726 are general purpose electrode design for use in most applications.
- 2734-2736 are high performance electrodes designed for demanding applications

2724-2726
2734-2736
pH/ORP
Electrodes
Series

Differential pH/ORP Electrodes:

- pH and reference signals are measured against third electrode, a solution ground, to ensure a stable reading.
- The differential reference is designed to protect the reference element from Bromide (Br⁻), Iodide (I⁻), Cyanide (CN⁻), Sulfides (S₂⁻) and other harsh compounds that react with Silver (Ag⁺). Also protects the reference electrolyte from Mercury (Hg⁺⁺), Copper (Cu⁺), lead (Pb⁺⁺), Perchlorate (ClO₄⁻), or other compounds that react with chlorides.
- Unique DryLoc[®] design is robust and watertight, ensuring rugged installation.
- Designed to mount in 1 in. standard pipe fittings for easy installation.
- Flat glass surface sensor design that is resistant to fouling and abrasion in dirty applications.
- Large reference volume and replaceable salt bridge allows the user to rebuild the reference and extend the service life of the electrode.

2764-2767
pH/ORP
Electrode

2774-2777
pH/ORP
Electrode

pH/ORP Sensor Electronics:

- Probe health monitoring, glass impedance and broken glass detection.
- Memory chip interface that allows for transferable calibration, runtime data, and manufacturing information.
- In-line integral mount and submersible installation versions.
- Automatic temperature compensation.
- Auto configuration for pH or ORP operation.
- Designed for SmartPro and Multi-Parameter transmitters.

Signet 9950 Transmitter Compatibility Overview

The 9950 Transmitter provides a single channel interface for:

- Flow
- pH/ORP
- Conductivity/Resistivity
- Salinity
- Temperature
- Pressure
- Level
- Volume
- Other 4-20 mA
- Dissolved Oxygen

The 9950 is available for Panel Mount installations

Features and Benefits

One Instrument for Multiple Sensor Types

- Two different sensor types can be combined in one instrument

Configurable Display

- Derived Measurements
- Advanced Boolean Logic
- Units and Decimals

Optional Modules can be Added for Additional Capabilities

USB Port for Field Upgrades Using Standard USB Flash Drive

...making updates easier

Temperature and Pressure sensors

9950 Conductivity Module

Conductivity / Resistivity Sensors

2850 Universal Mount

Absolute Input Versatility!

Paddlewheel and Magmeter Flow sensors

pH / ORP flat, bulb and differential electrodes with 2751

Dissolved Oxygen sensor

4 to 20 to S³L i-GO[®] Signal Converter 8058-1

*Ultrasonic, Radar, Hydrostatic and Point Level (*Note: requires 8058-3)

8058-3

Signet 9950 Dual Channel Transmitter

Member of the SmartPro® Family of Instruments

The 9950 Transmitter is a two channel controller that supports two sensors of same or different types in one instrument. The sensor types supported by the 9950 are Signet Flow, pH/ORP, Conductivity/Resistivity, Salinity, Temperature, Pressure, Level, Dissolved Oxygen, and devices that transmit a 4 to 20 mA signal with the use of the 8058 iGo® Signal Converter.

The 9950 includes advanced features such as derived functions, advanced multiple relay modes, and timer based relay functions. Derived function allows for the control of a relay or current loop with the sum, delta (difference), or ratio of two measurements, for example delta pressure and delta temperature. Multiple relay modes allow up to three signals to be used for the control of a single relay. This can be any combination of analog and binary inputs. The timer relay modes allow a relay to be activated on a repeating basis from every minute to once every 30 days. Weekday timer mode allows a relay to be energized on a specific day or days of the week at a specific time.

The 3-9950.393-3 Relay Module includes the ability to interface up to four binary inputs. The binary inputs are compatible with either open collector or mechanical contacts. The binary inputs can supply power to the four inputs or accepts powered outputs from external devices. These inputs can be used with level switches, flow switches, pressure switches or other devices. The inputs can be used to directly control the relays of the 9950 or can be used in combination with the measurement readings for advanced control of your process.

The 9950 supports the following relay modules:

- Four Channel Mechanical Relay Module
- Two Mechanical and Two Solid State Relay Module
- Two Mechanical Relays and Four Binary Inputs Module

The 9950 supports one or two direct conductivity modules for conductivity, resistivity or salinity measurements.

A dual channel 4 to 20 mA passive output module is available. This will allow expansion from a base of 2 current loop outputs to a maximum of 6 current loop outputs in a single transmitter.

Features

- One instrument for multiple sensor types
- Multiple language support for Simplified Chinese, English, French, German and Spanish
- Two different sensor types can be combined in one instrument
- Configurable display
- Derived measurements
- Advanced boolean logic
- Single Channel Direct Conductivity/Resistivity Module
- Two passive, 4 to 20 mA current loop outputs in base unit, four additional current loops via optional modules
- Optional Dual Channel, passive 4 to 20 mA Current Loop Module for 2 or 4 additional loop outputs
- USB Port for Field Upgrades using standard USB Flash Drive

Applications

- Wastewater Treatment
- Reverse Osmosis
- Deionization
- Chemical Manufacturing / Addition
- Metal and Plastic Finishing
- Fume Scrubber
- Cooling Tower
- Media Filtration
- Chemical Dosing/ Injection
- Aquatic Life Support
- Pools & Fountains
- Rinse Tanks
- Chemical Neutralization

Specifications

General		
Input Channels	Two frequency or S ³ L inputs, or optional direct conductivity modules, maximum of 2 channels	
Enclosure and Display		
Case Material	PBT	
Window	Shatter-resistant glass	
Keypad	4 buttons, injection-molded silicone rubber seal	
Display	Dot matrix, LCD	
Indicators	Two horizontal digital bar graphs, four LED relay status indicators	
Update Rate	1 s	
LCD Contrast	5 settings	
Size	¼ DIN	
Mounting		
Panel	¼ DIN, ribbed on four sides for panel mounting clip inside panel, silicon gasket included	
Wall	Wall Mount enclosure (sold as an accessory)	
Terminal Blocks		
Pluggable Screw Type	Use minimum 105 °C rated wire	
Torque Ratings		
	Power/Loop	0.49 Nm (4.4 lb-in.)
	Freq/S ³ L	0.49 Nm (4.4 lb-in.)
	Relay Module	0.49 Nm (4.4 lb-in.)
Connector Wire Gauge		
	Power, Loop	12 to 28 AWG
	Freq/S ³ L	16 to 28 AWG
Relay Module Connector Wire Gauge		
	Relay	12 to 28 AWG
Environmental		
Ambient Operating Temperature		
DC Power	-10 °C to 70 °C	14 °F to 158 °F
AC Power	-10 °C to 60 °C	14 °F to 140 °F
Storage Temp	-15 °C to 70 °C	5 °F to 158 °F
Relative Humidity	0 to 100% condensing for (front only); 0 to 95% non-condensing (rear panel)	
Maximum Altitude	4,000 m (13,123 ft)	
Enclosure Rating	NEMA 4X/IP65 (front face only)	
Performance Specifications		
System Accuracy	Primarily dependent upon the sensor	
System Response	Primarily dependent upon the sensor. Controller adds a maximum of 150 ms processing delay to the sensor electronics.	
	Minimum update period is 100 ms	
	System response is tempered by the display rate, output averaging and sensitivity feature

Specifications (continued)

Electrical Requirements	
Power to Sensors	
Voltage	+4.9 to 5.5 VDC @ 25 °C, regulated
Current	30 mA Maximum
Short Circuit	Protected
Isolation	Low voltage (< 48 V AC/DC)
Power Requirements	
DC (3-9950-1, 3-9950-2)	24 VDC nominal (12 to 32 VDC, ±10% regulated), UL 60950-1 or UL 61010-1 Power Supply rated for operation at 4000 m altitude
AC (3-9950-2)	100 to 240 VAC, 50 to 60 Hz, 24 VA
Maximum current	200 mA (without optional relay module)* 500 mA (with optional relay module)*
*The current draw of the other modules and the sensors are minimal	
Current Loop	12 to 32 VDC, ±10% regulated, 4 to 20 mA (30 mA max.)
Oversvoltage protection	48 Volt Transient Protection Device (for DC ONLY)
Current limiting for circuit protection	
Reverse-Voltage protection	
Input Types	
Digital (S ³ L) or AC frequency	
4 to 20 mA input via the 8058 iGo Signal Converter	
Open collector	
pH/ORP input via the Digital (S ³ L) output from the 2750 pH/ORP Sensor Electronics or 2751 pH/ORP Smart Sensor Electronics	
Conductivity/Resistivity via the Digital (S ³ L) output from the Direct Conductivity Module or 2850 Conductivity/Resistivity Sensor Electronics	
Sensor Types	Flow, pH/ORP, Conductivity/Resistivity, Pressure, Temperature, Level/Volume, Salinity, Dissolved Oxygen, Other (4 to 20 mA)
Sensor Input Specifications	
Digital (S ³ L)	Serial ASCII, TTL level, 9600 bps
Frequency Flow Sensors	0.5 to 1500 Hz
Sensitivity (for coil type sensors)	80 mV @ 5 Hz, gradually increasing with frequency to 2.5 V
Freq. Range (for square wave type sensors)	0.5 Hz to 1500 Hz @ TTL level input or open collector
K-Factor Range	0.0001 to 9999999
Accuracy	± 0.5% of reading max error @ 25 °C
Resolution	1 µs
Repeatability	± 0.2% of reading
Power Supply	
Rejection	No Effect ± 1 µA per volt
Short Circuit	Protected
Reverse Polarity	Protected
Update Rate	(1/frequency) + 100 ms

Raw Conductivity/Resistivity input directly from Signet Conductivity/Resistivity electrodes via Direct Conductivity/Resistivity Module or via 2850

Specifications (continued)

Binary Input (3-9950.393-3)			
Input Voltage Range (without damage)	-5 VDC to 30 VDC (No operation below 0 VDC)		
Max. Current Rating	6.0 mA		
Max. Voltage Rating	30 VDC		
Maximum Input Voltage for signal "Off" (low or "0")	1.5 VDC		
Minimum Input Voltage for signal "On" (high or "1")	3.0 VDC		
Maximum Current Draw for Signal "0" (low)	≤ 500 µA DC		
Minimum Current Draw for Signal "1" (high)	500 µA		
Typical Current Draw for Signal "1" (high)	6.0 mA at 30 VDC, 4.8 mA at 24 VDC, 2.4 mA at 12 VDC, 1.0 mA at 5 VDC		
Current Loop Specifications			
Current Loop Out	ANSI-ISA 50.00.01 Class H (Passive, external voltage required)		
Voltage	12 to 32 VDC, ±10% regulated, UL 60950-1 or UL 61010-1 Power Supply rated for operation at 4000 m altitude		
Max. Impedance	250 Ω @ 12 VDC	500 Ω @ 18 VDC	750 Ω @ 24 VDC
Span	3.8 to 21 mA		
Accuracy	± 32 µA max. error @ 25 °C @ 24 VDC		
Resolution	6 µA or better		
Temp. Drift	± 1 µA per °C		
Isolation	Low voltage (< 48 VAC/DC)		
Update Rate	100 mS nominal		
Zero	4.0 mA factory set; user programmable from 3.8 to 5.0 mA		
Full Scale	20.0 mA factory set; user programmable from 19.0 to 21.0 mA		
Power Supply Rejection	± 1 µA per V		
Actual Update Rate Determined by Sensor Type			
Short Circuit and Reverse Polarity Protected			
Adjustable Span, Reversible			
Error Condition	Selectable error condition 3.6 or 22 mA or None		
Test Mode	Increment to desired current (range 3.8 to 21.00 mA)		
Analog Outputs	2 Passive 4 to 20 mA Outputs in Base Unit or 2 or 4 passive current loops by optional module(s)		
Relay Specifications			
Dry-Contact Relays (3-9950.393-1, 3-9950.393-2, and 3-9950.393-3)			
Type	SPDT		
Form	C		
Max. Voltage Rating	30 VDC or 250 VAC		
Max. Current Rating	5 A resistive		
Solid-State Relays (3-9950.393-2)			
Type	SPDT		
Form	C		
Max. Voltage Rating	30 VDC or 30 VAC		
Max. Current Rating	0.050 A resistive		
Hysteresis	Adjustable (absolute in Engineering Units)		
On Delay	9999.9 seconds (max)		
Cycle Delay	99999 seconds (max)		
Test Mode	Set On or Off		
Maximum Pulse Rate	0 to 300 pulses/minute		
Proportional Pulse	0 to 300 pulses/minute		
Volumetric Pulse Width	0.1 to 3200 s		
PWM Period	0.1 to 320 s

Signet 9900 Transmitter

Member of the SmartPro® Family of Instruments

Panel Mount

Field Mount

The Signet 9900 Transmitter provides a single channel interface for many different parameters including Flow, pH/ORP, Conductivity/Resistivity, Salinity, Pressure, Temperature, Level, Dissolved Oxygen, and other sensors that output a 4 to 20 mA signal. The 9900-1P Transmitter can also be used as a Batch Controller when a Batch Module and Relay Module are installed.

The 9900 is offered in both panel or field mount versions. Both configurations offer an extra large (3.90" x 3.90") auto-sensing backlit display features "at-a-glance" visibility that can be viewed at 4-5 times the distance over traditional transmitters. The highly illuminated display and large characters reduce the risk of misreading or misinterpreting the displayed values. The display shows separate lines for units, main and secondary measurements as well as a "dial-type" digital bar graph.

The 9900 can run on 12 to 32 VDC power (24 VDC nominal), and can also be loop powered with compatible sensors.

Rear Enclosure kits are available for the 9900-1P Panel Mount. Kit options include either a Hinged Cover (3-9900.399-1) for wall or pipe mount installations, or a Flat Cover (3-9900.399-2) designed to fit inside a panel for waterproof protection.

The 9900 offers complete flexibility, plug-in modules allow the unit to easily adapt to meet changing customer needs. Optional modules include the new Modbus as well as the Relay, Direct Conductivity/Resistivity, H COMM, Batch, 4 to 20 mA Output, and a PC COMM Configuration Tool. The unit can be used with default values for quick and easy programming or can be customized with labeling, adjustable minimum and maximum dial settings, and unit of measure and decimal location choices.

Features

- **NEW! Modbus Module** supports RS485 Serial Modbus Communications
- **Multiple sensor types** supported with one instrument
- "Dial-type" digital bar graph
- **Modules are field installable and replaceable** anytime
- **Optional Relay Module** for addition of two dry contact relays
- **Optional H COMM Module** for two-way communication
- **Optional Batch Module** for Batch Control
- **Modbus Module** for connection to Serial, RS485, Modbus networks
- **One 4 to 20 mA output in base unit. One additional 4 to 20 mA available with optional module**
- **Rear Enclosure kits** for panel, wall or pipe mounting
- **Warning and Relay LED indicators** for "at a glance" visibility
- **Customizable features** including digital label for custom identification
- **Optional PC COMM configuration tool** for configuration at a PC

Applications

- **Wastewater Treatment**
- **Reverse Osmosis**
- **Deionization**
 - Ultra Pure Water
 - Two Bed System
 - Mixed Bed System
- **Chemical Manufacturing/Addition**
- **Metal and Plastic Finishing**
- **Fume Scrubber**
- **Cooling Towers**
- **Media Filtration**

U.S. Patent Nos.: D662,844 S, D622,845 S
Taiwan Patent Nos.: D147,149, D147,150

Specifications

General			
Input Channels		One	
Input Types	Digital (S ³ L)	Serial ASCII, TTL level, 9600 bps	
	Frequency	Range	0.5 to 1500 Hz
		Accuracy	0.5% of reading
Measurement Types		Flow, pH/ORP, Conductivity/Resistivity, Salinity, Pressure, Temperature, Level, Dissolved Oxygen, Batch or user-defined (via 8058)	
Enclosure and Display			
Case Material		PBT	
Window		Shatter-resistant glass	
Keypad		4 buttons, injection-molded silicone rubber seal	
Display		Backlit, 7 and 14-segment	
Update Rate		1 s	
LCD Contrast		5 settings	
Indicators		"Dial-type" digital bar graph. LEDs for Open Collector, Relays and Warning Indicator	
Enclosure Size		¼ DIN	
Mounting	9900-1P		
	Panel	¼ DIN, ribbed on four sides for panel mounting clip inside panel, silicon gasket included. Optional rear enclosure with flat cover available for waterproof protection when installed inside a panel.	
	Wall	Options include 9900-1P installed in pre-wired NEMA enclosure or inside of rear enclosure with hinged cover.	
	Pipe	Optional Rear Enclosure with hinged cover and 9900-1P for pipe mount installation	
Mounting	9900-1		
	Field (Integral)	Options include yellow universal or integral kits for installation with sensor	
Display Ranges			
pH		0.00 to 15.00 pH	
pH Temperature		-39.99 °C to 149.99 °C	-40 °F to 302 °F
ORP		-1999 to +1999 mV	
Flow Rate		-9999 to 99999 units per second, minute, hour or day	
Totalizer		0.00 to 99999999 units	
Conductivity		0.0000 to 99999 µS, mS, PPM and PPB (TDS), kΩ, MΩ	
Conductivity Temperature		-100 °C to 250 °C	-148 °F to 350 °F (application and sensor dependent)
Temperature		-99 °C to 350 °C	-99 °F to 350 °F
Pressure		-40 to 1000 psi	
Level		-9999 to 99999 m, cm, ft, in, %	
Volume		0 to 99999 cm ³ , m ³ , in ³ , ft ³ , gal, L, lb, kg, %	
Salinity		0 to 99.97 PPT	
Dissolved Oxygen		PPM 0-50, % SAT 0-200, 0 to 999.9 TORR	
Dissolved Oxygen Temperature		-99 °C to 350 °C	-99 °F to 350 °F
Environmental			
Ambient Operating Temperature			
Backlit LCD		-10 °C to 70 °C	14 °F to 158 °F
Storage Temperature		-15 °C to 70 °C	5 °F to 158 °F
Relative Humidity		0 to 100% condensing for field mount; 0 to 95% non-condensing for panel mount	
Maximum Altitude		4,000 m (13,123 ft)	
Enclosure Rating		NEMA 4X/IP65 (front face only on panel mount); field mount is 100% NEMA 4X/IP65

Specifications (continued)

Electrical Requirements				
Power to Sensors				
Voltage	+4.9 to 5.5 VDC @ 25 °C, regulated			
Current	1.5 mA max in loop power mode (up to 2.0 mA with 24 V @ 300 Ω max. loop impedance); 20 mA max when using DC power			
Short Circuit	Protected			
Isolation	Low voltage (< 48V AC/DC) to loop with DC power connected			
No isolation when using loop power only				
Terminal Blocks	Pluggable screw type	14 AWG max wire gauge		
Input Power				
DC	10.8 to 35.2 VDC, regulated			
9900 without Relay Module	200 mA @ 10.8 VDC to 35.2 VDC			
9900 with Relay Module	300 mA @ 10.8 VDC to 35.2 VDC			
Overvoltage Protection	48 Volt Transient Protection Device			
Current limiting for circuit protection				
Reverse-Voltage Protection				
Loop Power				
No DC Power Input				
	Max. Loop Impedance	50 Ω @ 12 V	325 Ω @ 18 V	600 Ω @ 24 V
With DC Power Input or with 2nd loop, all the time				
	Max. Loop Impedance	250 Ω @ 12 V	500 Ω @ 18 V	750 Ω @ 24 V
Relay Specifications				
		Dry-Contact Relays (2)	Open Collector (1)	
Type		SPDT	N/A	
Form		C	N/A	
Max. Current Rating		5 A resistive	50 mA DC	
Max. Voltage Rating		30 VDC or 250 VAC	30 VDC	
Hysteresis		Adjustable (absolute in engineering units) (EUs)		
Latch		Reset in test screen only		
Delay		9999.9 seconds (max.)		
Test Mode		Set On or Off		
Cycle Time		99999 seconds (max.)		
Maximum Pulse Rate		300 pulses/minute		
Proportional Pulse		400 pulses/minute		
Volumetric Pulse Width		0.1 to 3200 s		
Pulse Width Modulation		0.1 to 320 s		
Input Types				
Digital (S ³ L) or AC frequency				
4 to 20 mA input via the 8058-1				
pH/ORP input via the Digital (S ³ L) output from the 2750/2751 pH/ORP Sensor Electronics				
Raw Conductivity/Resistivity input directly from Signet Conductivity/Resistivity electrodes via Direct Conductivity/ Resistivity Module or via 2850				
Input Specifications				
Digital (S ³ L)	Serial ACSII, TTL level, 9600 bps			
Frequency Input				
	Sensitivity	80 mV @ 5 Hz, gradually increasing with frequency		
	Span	0.5 Hz to 1500 Hz @ TTL level input		
	Accuracy	± 0.5% or reading max error @ 25 °C		
	Resolution	1 μS		
	Repeatability	± 0.2% of reading		

Specifications (continued)

Input Specifications continued

Power Supply		
Rejection	±1 µA per volt	
Short Circuit	Protected	
Update Rate	(1/frequency) + 150 ms	

Output Specifications

Current Output - One (1); Two (2) with 4 to 20 mA Output Module

Current Loop Output Standard	ANSI-ISA 50.00.01 Class H		
Current Output	4 to 20 mA, isolated, fully adjustable and reversible		
Span	3.8 to 21 mA		
Zero	4.0 mA factory set; user programmable from 3.8 to 5.0 mA		
Full Scale	20.00 mA factory set; user programmable from 19.0 to 21.0 mA		
Accuracy	±32 µA max. error @ 25 °C @ 24 VDC		
Resolution	6 µA or better		
Temperature Drift	±1 µA per °C		
Power Supply Rejection	±1 µA per V		
Isolation	Low voltage (< 48 VAC/DC)		
Voltage	12 to 32 VDC ±10%		
Max. Impedance (with DC power input)	250 Ω @ 12 VDC	500 Ω @ 18 VDC	750 Ω @ 24 VDC
Max. Impedance (no DC power input)	50 Ω @ 12 VDC	325 Ω @ 18 VDC	600 Ω @ 24 VDC
Update Rate	150 mS nominal		
Short circuit and reverse polarity protected			
Adjustable Span	Reversible		
Error Condition	Selectable error condition 3.6 or 22 mA		
Actual update rate determined by sensor type			
Test Mode	Increment to desired current (range 3.8 to 21.00 mA)		

Shipping Weights

Base Unit	0.63 kg	1.38 lb
Modbus Module	0.16 kg	0.35 lb
H COMM Module	0.16 kg	0.35 lb
Conductivity Module	0.16 kg	0.35 lb
Relay Module	0.19 kg	0.41 lb
Batch Module	0.16 kg	0.35 lb
4 to 20 Output Module	0.16 kg	0.35 lb

Plug in Modules

Optional modules and accessories are available for the 9900:

- Base Unit (required)
- Slot for optional H COMM or Modbus Module
- Slot for optional Conductivity/Resistivity, Batch, or 4 to 20 mA Output Module
- Slot for optional Relay Module (not available on field mount)

Each item is ordered separately.

Modules are field-replaceable at any time.

Relay Module (Panel Installations Only) (3-9900.393)

This module adds two programmable dry-contact relays to the standard Open Collector output in the base unit.

Direct Conductivity/Resistivity Module (3-9900.394)

The Direct Conductivity/Resistivity Module interfaces Signet 2819-2823 and 2839-2842 Conductivity electrodes directly to the 9900.

Batch Module (3-9900.397)

The Batch Module adds batch capability to the 9900 Transmitter (Generation II and newer). It is compatible with all Signet flow sensors.

3-9900.270-M2

3-9900.270-M3

3-9900.270-M4

Coming Soon

Modbus Modules (3-9900.270-MX)

These Modules allow the 9900 to communicate with Automation systems using the Modbus serial RS485 Protocol.

3-9900.270-M1 - Modbus Module with 6 Wire Cable Assembly

3-9900.270-M2 - Terminal Block Connections (Panel Mount Only)

3-9900.270-M3 - M12 Connector (Field Mount Only)

3-9900.270-M4 - Coming Soon - Modbus Module with 5 Wire Cable Assembly

H COMM Module (HART®) (3-9900.395)

The H COMM Module enables communication between the 9900 and a HART® enabled device.

(Not available for use on 3-9900-1BC Batch Controller)

4 to 20 mA Output Module (3-9900.398-1)

The 4 to 20 mA Output Module adds a second 4 to 20 mA Output to the 9900 Transmitter (Generation III and later). Each of the outputs can be used to output the primary and/or secondary measurement.

Ordering Information

Mfr. Part No	Code	Description
9900 Base Unit - Single Channel, Multi-Parameter, 4 to 20 mA, Open Collector, DC power		
3-9900-1P	159 001 695	9900 Panel Mount Transmitter
3-9900-1	159 001 696	9900 Field Mount Transmitter
3-9900-1BC	159 001 770	Batch Controller System
Optional Accessory Modules		
3-9900.270-M1	159 200 120	Modbus Module with 6 Wire Cable Assembly
3-9900.270-M2	159 200 121	Modbus Module with Terminal Block Assembly (Panel Mount Only)
3-9900.270-M3	159 200 122	Modbus Module with M12 Connector Assembly (Field Mount Only)
3-9900.270-M4	Coming Soon	Modbus Module with 5 Wire Cable Assembly
3-9900.393	159 001 698	Relay Module - 2 DCR (Dry-contact relays)
3-9900.394	159 001 699	Direct Conductivity/Resistivity Module
3-9900.395	159 001 697	H COMM Module
3-9900.397	159 310 163	Batch Module
3-9900.398-1	159 001 784	4 to 20 mA Output Module*

*Module adds a second 4 to 20 mA output. One 4 to 20 mA output is included in the base unit.

Accessories and Replacement Parts

Signet 9900-1BC Batch Controller System

Member of the SmartPro® Family of Instruments

The Signet 9900-1BC Batch Controller system provides control capability and process fine-tuning in a familiar package. The programming interface uses a four-button keypad and an intuitive menu for adjusting a batching system to the best performance possible. Choose between simple or advanced modes. In simple mode, relay outputs can be used for batching, external counter, missing signal alarm and 4 to 20 mA output can be used to indicate batch status. In advanced mode relays can also be used for end of batch pulse, two-stage shutdown, overrun alarm, high flow detection, total volume or source volume alarm.

New to Generation IV, Automatic Overrun Compensation feature. The 9900-1BC can measure excess flow after a batch stops and use it to reduce flow to the next batch by de-energizing the batch relay early, thus closing the flow control valve, and eliminating batch overrun.

Designed for a variety of batch applications, the 9900-1BC can save up to 10 batch sizes for batching or blending a variety of liquid volumes. Customize batch names for easy distinction between batches. One K-Factor can be used for all batches, or use a different K-Factor for each batch for when different liquids are batched. User can choose to be prompted prior to starting a batch with a Yes/No or with a password to prevent inadvertently starting a batch.

The 9900-1BC operates on 10.8 to 35.2 VDC, regulated. Connect a remote start or stop switch for remote batch control. Use the end-of-batch pulse to trigger the next step in the process.

Features

- **Rear Enclosure option** means the 9900-1BC Batch Controller can be installed on a pipe or wall mounted in addition to panel mount installations
- **Store up to 10 batch sizes** for batching or blending a variety of liquid volumes
- **Customize 10 batch names** for easy distinction between batches
- **Modular Design** - Can be purchased as a complete system or add a Batch Module and Relay Module to an existing 9900 Transmitter (Generation II or later)
- **Automatic Overrun Compensation** can eliminate excess flow by automatically reducing the next batch size by the overrun value of previous batch.
- **Remote control wiring** with start, stop & resume terminals for remote batch control
- **3 programmable relays**, one open collector, two dry-contact relays
- **Two-stage control** to prevent overflowing or to minimize water hammer
- **Confirmation START/RESUME** - Can prompt user prior to starting each batch with a Yes/No or password to prevent inadvertently starting a batch
- **Enter 10 different K-Factors** - one per batch for when different liquids are batched

Applications

- **Batch Process**
- **Filter Backwash Initiation**
- **Chemical Addition**
- **Canning and Bottling**
- **Tank Filling**
- **Bulk Storage Transfer**
- **Chemical Processing**
- **Food and Beverage**
- **Life Sciences**
- **Water Treatment**

U.S. Patent No.: D662,844 S

Taiwan Patent No.: D147,150

Specifications

General		
Input Channels	One	
Accuracy	±0.2%	
Terminal Blocks	Pluggable screw type	16 AWG max wire gauge
Enclosure and Display		
Case Material	PBT	
Window	Shatter-Resistant Glass	
Keypad	4 buttons, injection-molded silicone rubber seal	
Display	Backlit, 7- and 14-segment	
Indicators	Dial-type digital bar graph	
Update Rate	1 s	
LCD Contrast	5 settings	
Enclosure size and color	¼ DIN	
Mounting	Panel	¼ DIN, ribbed on four sides for use with mounting bracket for panel mount installations
	Wall	Large enclosure (sold as an accessory) that encases the panel mount transmitter or using optional rear enclosure
	Pipe	Using optional rear enclosure
Environmental Requirements		
Ambient Operating Temperature		
Backlit LCD	-10 °C to 70 °C	14 °F to 158 °F

	Form	C	N/A
	Max. Voltage Rating	30 VDC or 250 VAC	30 VDC
	Max. Current Rating	5 A	50 mA
Hysteresis		Adjustable (absolute in Engineering Units)	
Latch		Reset in test screen or view mode	
Delay		9999.9 seconds (maximum)	
Test Mode		Set On or Off	
Maximum Pulse Rate		400 pulses/minute	
Volumetric Pulse Width		0.1 s to 3200 s	
4 to 20 mA Current Loop Output		ANSI-ISA 50.00.01 Class H (passive: external power required)	
	Output	1	
	Span	3.8 to 21 mA	
	Zero	4.0 mA factory set; user programmable from 3.8 to 4.2 mA	
	Full Scale	20.00 mA factory set; user programmable 19.0 to 21.0 mA	
	Accuracy	± 32 µA max. error @ 25 °C @ 24 VDC	
	Resolution	6 µA or better	
	Temperature Drift	± 1 µA per °C	
	Power Supply Rejection	± 1 µA per V	
	Isolation	Low voltage (< 48 VAC/DC)	
	Voltage	10.8 to 35.2 VDC	
	Max. Impedance	250 Ω @ 12 VDC	500 Ω @ 18 VDC 750 Ω @ 24 VDC
	Update Rate	150 ms nominal	
Short circuit and reverse polarity protected			
	Adjustable span	Reversible	
	Error Condition	Selectable error condition 3.6 or 22 mA or NONE	
Actual update rate determined by sensor type			
	Test Mode	Increment to desired current (range 3.6 to 21.00 mA)	
Shipping Weights			
	Base Unit	0.63 kg	1.38 lb
	Batch Module	0.16 kg	0.35 lb
	Relay Module	0.19 kg	0.41 lb

Signet Rear Enclosure Kit for 9900 Transmitter

Panel Mount Transmitter

Hinged Cover

Flat Cover

The Signet Rear Enclosure Kit allows the 9900 Transmitter to be mounted just about anywhere. The design features make it suitable for installations onto walls, pipes, struts or inside panels. There are two kits available, Rear Enclosure with Hinged cover or with Flat cover. Kits can be installed on any generation of the 3-9900-1P Panel Mount Transmitter. They can also be used with the 3-9900-1BC Batch Controller System.

The hinged cover version is suitable for wall or pipe mount installations. The kit is equipped with necessary wall mounting hardware. Plastic tie wraps or metal hose clamps (customer supplied) can be used for pipe mount installations. Two slots are available up to 12.7 mm (0.5 in.) wide. The hinged cover design allows for easy access to the back of the 9900 Transmitter for wiring and module installation. The user can install the hinged door to swing down, up or side-to-side.

The flat cover kit is designed to fit inside a panel for waterproof protection.

Both options have sufficient space for all 9900 Transmitter modules. Enclosures have hole markers on all sides, so users can drill holes and position the wires on the top, bottom or sides.

Features

- Compatible with all existing 9900-1P Transmitters
- NEMA TYPE 4X/IP66 rated for indoor or outdoor installations
- Spacious for any 9900 Transmitter accessory module
- Hinged cover design for easy to access wiring
- Hinged cover suitable for wall mount or pipe mount installations
- Use inside a panel for waterproof protection
- Drill holes on any side for flexible wiring orientation

Applications

- Wastewater Treatment
- Reverse Osmosis
- Deionization
 - Ultra Pure Water
 - Two Bed System
 - Mixed Bed System
- Chemical Manufacturing/Addition
- Metal and Plastic Finishing
- Fume Scrubber
- Cooling Towers
- Media Filtration
- Aquatic
- Municipalities

Signet 0252 Configuration Tool

The new 0252 Configuration Tool interfaces with Signet SmartPro® Transmitters and blind sensors, allowing fast and easy configuration using a PC. The configuration information can be saved to a file and stored on a PC to be used later on a replacement sensor or for another sensor in a similar application.

The saved configuration file can be downloaded to the sensor or the SmartPro Transmitters in mere seconds.

The save and load features allow you to back up all of your settings and transfer them to future devices. You can also e-mail the files to share with other users of the 0252 software.

The 0252 will graph and data log sensors in real time for trend and troubleshooting analysis. Export data logs in comma-separated value (CSV) format for review and reporting in many popular spreadsheet and database applications.

Support for new sensors and products is as simple as connecting to the Internet. The software will automatically download updates from the Internet to ensure you have the latest version of the application.

The software is supported in the following languages: Chinese, English, French, German, Italian, Portuguese and Spanish.

Features

- **Back up and restore SmartPro® Transmitters and blind sensors configurations to a computer file**
- **User-friendly interface**
- **Configure settings such as instrument type, units, scale 4 to 20 current loops and modify labels from the computer**
- **Use a single file to clone multiple SmartPro® Transmitters and blind sensors**
- **Red and blue LED indicators for power and data**

Compatibility

- **9900 Transmitter**
- **2250 Level Sensor**
- **2350 Temperature Sensor**
- **2450 Pressure Sensor**
- **2551 Magmeter Flow Sensor**
- **2552 Metal Magmeter Flow Sensor**
- **2751 pH/ORP Smart Sensor Electronics**
- **2610-51 Dissolved Oxygen**
- **Windows XP, 32-bit**
- **Windows Vista®**
- **Windows 7 (32 and 64-bit versions)**
- **Windows 8 and Windows 8.1 (32 and 64-bit versions)**
- **Windows 10 (32 and 64-bit versions)**

Microsoft, Windows, and Windows Vista are registered trademarks of Microsoft Corporation in the United States and other countries.

Specifications

General		
Materials	ABS body	
Power Requirements	Supplied by USB Interface	
System Requirements	Windows XP, Windows Vista, Windows 7 (32 and 64 bit), Windows 8, 8.1, and Windows 10 (32 and 64 bit), free USB port, administrator account for installation, Internet access required for automatic updates	
Inputs	3-wire (S ³ L) input	
Output Specifications	USB 1.0 or greater	
Shipping Weight		
	0.220 kg	0.48 lb
Standards and Approvals		
	CE, FCC	
	RoHS compliant, China RoHS

System Overview

Modifiable Parameters (dependent on SmartPro Instrument type or sensor to be configured)

- Instrument type
- Units of measure
- Customer configurable tag (label)
- 4 to 20 mA span
- 4 to 20 mA error value
- Relay and open collector modes
- Bar graph span
- Back light control
- LCD contrast
- Password
- and other instrument and sensor specific settings

- Relay Modes (dependent on Instrument type)
 - Low set point
 - High set point
 - Window In
 - Window Out
 - PWM
 - Proportional Pulse
 - Cycle Low
 - Cycle High
 - Volumetric Pulse
 - Totalizer
 - Error
- Includes 2 m (6 ft) USB extension cable and 1 m (3 ft) SmartPro (9900) interface cable

Signet 8900 Multi-Parameter Controller

Member of the ProcessPro® Family of Instruments

The Signet 8900 Multi-Parameter Controller takes the concept of modularity to the extreme. Each 8900 is field commissioned with the users specified combination of inputs, outputs, and relays using simple-to-install modular boards into the base unit. Configure the system by selecting either two, four, or six input channels which accepts any of the Signet sensors listed below, and/or other manufacturer's sensors via a 4 to 20 mA signal converter (Signet Model 8058). To complete your unit, choose a power module with universal AC line voltage or 12 to 24 VDC $\pm 10\%$, regulated.

If more features are needed, analog output and relay modules are available and easily installed. Plus, the 8900 will support four additional relays via an external relay module. There are other notable features that the 8900 offers. For instance, digital input to the 8900 enables longer cable runs and simplified wiring with minimal noise interference. Advanced relay logic allows users to select up to 3 measurement sources to trigger 1 relay. Derived measurements include difference, sum, ratio, percent recovery, percent rejection, percent passage and BTU. The menu system can be programmed to display in multi-languages including English, German, French, Spanish, Italian, and Portuguese.

Features

- Measures Flow, pH, ORP, Conductivity, Pressure, Level and Temperature
- Multi-language display
- ¼ DIN enclosure
- Up to 4 analog outputs
- Up to 8 relays
- 12 to 24 VDC or 100 to 240 VAC $\pm 10\%$, regulated power
- Digital communication allows for extended cable lengths and easy wiring
- Accepts 3rd party 4 to 20 mA output devices when used with 8058 signal converter
- Available with 2 to 6 channels
- Simultaneous BTU Calculations with Heating & Cooling Totalizers per calculation

Applications

- RO/DI System Control
- Media Filtration
- Pure Water Production
- Demineralizers
- Chemical Processing
- Metal & Plastics Finishing
- Fume Scrubbers
- Proportional Chemical Addition
- Cooling Tower & Boiler Protection
- Wastewater Treatment
- Aquatic Animal Life Support Systems
- Rinse Tank

Specifications

General		
Compatibility	Modular (completely field-commissionable)	
No. of Input Channels	2, 4, or 6	
Compatible Sensors	See System Overview	
Input Signal Types	Digital (S ³ L)	Serial ASCII, TTL level 9600 bps
	Frequency	0.5% of reading
Measurement Types	Flow, pH, ORP, Conductivity/Resistivity, Pressure, Temperature, Level, or 3 rd party devices with a 4 to 20 mA output	
Derived Measurements	Sum, difference, ratio, % recovery, % reject, % passage, power (BTU)	
No. of Relays Supported	Available: 2, 4, 6 or 8 (8 dry-contact or 4 solid state and 4 dry- contact)	
No. of Analog Outputs	Available in pairs: 2 or 4 (active and/or passive 4 to 20 mA); and/or 2 (0 to 5/10 VDC)	
Enclosure and Display		
Enclosure Rating	NEMA 4X/IP65 (front face only)	
Case Material	PBT	
Panel Gasket	Silicone Sponge	
Window	Self-healing polyurethane-coated polycarbonate	
Keypad	4-buttons, highly tactile and audible injection-molded silicone rubber seal	
Display	Alphanumeric 2 x 16 back-lit LCD	
Update Rate	1 second	
Accuracy	Sensor dependent	
LCD Contrast	4 settings	
Languages Available	English, French, Spanish, German, Italian and Portuguese	
Display Ranges (see sensor specifications for actual measurement limits)		
pH	-2.00 to 15.00 pH	
pH Temperature	-40 °C to 150 °C	-40 °F to 302 °F
ORP	-9999 to +9999 mV	
Flow Rate	0.0000 to 999999 units per second, minute, hour or day	
Totalizer	0.00 to 99999999 units	
Conductivity	0.0000 to 999999 µS, mS, PPM & PPB (TDS), kΩ, MΩ	
Conductivity Temperature	-99.9 °C to 250 °C	-148 °F to 482 °F
Temperature	-99.9 °C to 999.9 °C	-148 °F to 999.9 °F
Pressure	-99.99 to 9999 psi, kPa, bar	
Level	-99999 to 99999 m, cm, ft, in., %	
Volume	-99999 to 999999 m ³ , ft ³ , in ³ , cm ³ , gal, L, kg, lb, %	
Other (4 to 20 mA)	-99999 to 999999 user selectable units	
Environmental		
Ambient Operating Temperature		
Backlit LCD	-10 °C to 55 °C	14 °F to 131 °F
Storage Temperature	-15 °C to 80 °C	5 °F to 176 °F
Relative Humidity	0 to 95%, non-condensing	
Maximum Altitude	2,000 m (6,560 ft)	
	4,000 m (13,123 ft); use only DC power supply and, if applicable, solid state relays to maintain UL safety standard up to this altitude

Specifications (continued)

Electrical			
Power Requirements (AC or DC via Power Modules)			
Universal AC	100 to 240 VAC \pm 10%, regulated 50-60 Hz, 24 VA max.		
DC	12 to 24 VDC, \pm 10%, regulated recommended, 7 Watts max.		
Output Power to Sensors	5 VDC up to 40 mA total		
Terminal type	Screw-clamp, removable via plug-in modules		
Analog Outputs (via I/O Modules and Output Modules) All analog outputs are freely assignable to any channel.			
4 to 20 mA Output	Endpoints are adjustable and reversible		
Minimum Default	4.0 mA; user adjustable from 3.8 to 5.0 mA		
Maximum Default	20.00 mA; user adjustable from 19.0 to 21.0 mA		
Test Mode	Produces an adjustable 4 to 20 mA signal for functional verification of each output circuit		
Isolation	Up to 48 VAC/DC		
Error Condition	22.1 mA (default state when output source not configured)		
Update Rate	100 ms		
Accuracy	\pm 32 μ A over entire operating temperature range		
Passive 4 to 20 mA (External Power required)			
Voltage	12 to 24 VDC, \pm 10%, regulated		
Max. Impedance	250 Ω @ 12 VDC	500 Ω @ 18 VDC	750 Ω @ 24 VDC
Active 4 to 20 mA (Internally Loop Powered)			
Max. Impedance	750 Ω		
0 to 5/10 VDC Output	Endpoints are adjustable and reversible		
Output Range	0 to 5 VDC or 0 to 10 VDC, software selectable		
Minimum Default	0 VDC; user programmable from 0 to 0.5 VDC		
Maximum Default	5 VDC; user programmable from 4.5 to 5.5 VDC, or 9.5 to 10.5 VDC		
Output Load	10 k Ω minimum		
Test Mode	Produces an adjustable signal for functional verification of each output circuit		
Isolation	Up to 48 VAC/DC		
Error Condition	0 VDC (default state when output source not configured)		
Update Rate	100 mS		
Accuracy	\pm 20 mV over entire operating temperature range		
Resolution	5 mV		
Power Supply Rejection	0.5 mV/V		
Relay Modules All relays are freely assignable to any channel.			
Internal relay modes of operation	Off, Low, High, Window, Proportional Pulse, Pulse Width Modulation, USP, Volumetric, Pulse, Totalizer Volume, Advanced, % Rejection, % Recovery, % Passage		
External relay modes of operation	Off, Low, High, Window, USP, Totalizer Volume, Advanced, % Rejection, % Recovery, % Passage		
Hysteresis	User adjustable		
Time Delay	0 to 6400 seconds		
Advanced Relay	Use "AND/OR" logic along with relay sources to trigger a relay. High/Low modes available for each of the 3 sources		
Solid State Relays	Non-mechanical switches		
Normally Open/Closed Operation	Software selectable		

Specifications (continued)

Relay Modules continued		
Maximum Voltage Rating	30 VDC or 42 VAC p-p	
Current Rating	50 mA DC or 50 mA AC RMS	
On-state Impedance	30 Ω or less	
Off-state Leakage	400 nA or less, AC or DC	
Isolation	Up to 48 VAC/DC	
Transient Protection	Embedded, up to 48 V over-voltage	
Dry-contact Relays	Mechanical contacts	
Type	SPDT	
Form	C	
Maximum Pulse Rate	600 pulses/min. (volumetric pulse & PWM modes) 400 pulses/min. (prop. pulse mode)	
Maximum Voltage Rating	30 VDC or 250 VAC	
Current Rating	5 A	
Shipping Weight		
Base Unit	1.00 kg	2.25 lb
Power Module	0.12 kg	0.25 lb
I/O Module	0.12 kg	0.25 lb
Output Module	0.12 kg	0.25 lb
Relay Module	0.12 kg	0.25 lb
Standards and Approvals		
	CE, UL, FCC	
	RoHS compliant, China RoHS	
	Manufactured under ISO 9001 for Quality and ISO 14001 for Environmental Management and OHSAS 18001 for Occupational Health and Safety

All sold separately

There are hundreds of system types that can be set up with the 8900. The examples below illustrate various sensors in different installation schemes. Wiring topology for point-to-point, daisy-chain, multi-drop, or a combination of these are listed in each example. Digital sensor outputs allow for long cable runs with high noise immunity. See Wiring section for allowable cable lengths.

Example 1

- 8900 input module: Two inputs
- Sensors connected: Signet 2751 with 2724 pH sensors and 2540 flow (frequency)
- Wiring configuration: Point-to-point

Notes

1. External relays can be used with any input module and does not consume a sensor input channel (Model 8059)
2. Model 8058 Signal Converter can be used with any input module

Example 2

- 8900 input module: Four inputs
- Sensors connected: Signet 2350 temperature sensor, 2850 with 2841 conductivity, and two 2450 pressure sensors
- Wiring configuration: Daisy-chain

Example 3

- 8900 input module: Four inputs
- Sensors connected: Signet 2507 flow (frequency) and 2751 with 2724 pH sensors; Other manufacturers' dissolved oxygen and level sensors with 4 to 20 mA output
- External Devices: Signet 8058 signal converter - 4 to 20 mA to digital (S³L)
- Wiring configuration: Combination of point-to-point and daisy-chain

Example 4

- 8900 input module: Six inputs
- Sensors connected: Signet 2350 temperature sensor, 2850 with 2840 conductivity, 2450 pressure, 2751 with 2724 pH, and 515 and 2536 flow (frequency) sensors
- External Devices: Signet 8059 external relay module
- Wiring configuration: Combination of point-to-point and Multi-drop

Wiring Options

- **Point-to-point** wiring is direct wiring of individual devices into the controller. This wiring topology is applicable for all inputs.
- **Daisy-chain** wiring allows sequential connection from one device to the next by using junction boxes. This wiring topology is applicable for digital (S³L) inputs only.
- **Multi-drop** wiring allows drops from a single bus cable. Junction boxes can be used for the 3-way junctions that are formed with this wiring scheme. This wiring topology is applicable for digital (S³L) inputs only.

Please refer to **Wiring, Installation, and Accessories** sections for more information.

Installation of Modules with the Base Unit

3-8900

One base unit is required to build a functional 8900. It is offered with a backlit LCD display. Programming the unit is done simply via the push-button keypad.

The unit can be tailored to display in English, German, French, Spanish, Italian, and Portuguese. The two line display allows for easy programming, navigation, and viewing of each channel.

1. I/O module

One I/O module is required to build a functional 8900. I/O modules are offered for 2, 4, or 6 sensor inputs with or without two mA or voltage outputs. Users can select two additional outputs via the output module.

2. Power module

One power module is required to build a functional 8900. The power module is offered for universal 100/240 VAC or 12 to 24 VDC (This module can be powered by optional external relays (see ordering information for more details).

3. Output module

Output modules are optional when building an 8900. This module can be used in addition to other outputs that are available in the I/O modules. Active current is powered by the 8900. Passive outputs require an external 12 to 24 VDC power supply. All outputs are assignable to any input channel.

4. & 5. Relay modules

Relay modules are optional when building an 8900. Relay modes of operation include off, low, high, window, USP, totalizer volume, advanced, proportional pulse, pulse width modulation, volumetric pulse, % reject, % recovery and % passage. The advanced relay option for "AND/OR" logic is used for up to 3 conditions. For instance, a relay will go to high/low if "a" is true and "b" or "c" is false. One or two relay modules can be installed into the 8900. One additional external relay module can also be used at the same time (See optional external relay ordering information.) All relays are assignable to any input channel.

Installation of Modules:

Modules simply plug in by sliding into the base unit on rails. They are held securely in place by the rear cover. Changes and upgrades can be made in the field at any time.

Ordering Notes

- 1) Building a functional unit requires a base unit, I/O module, and power module.
- 2) Output options are available on I/O modules and additional output modules can be used. The 8900 can support up to four outputs.
- 3) The 8900 can support up to eight relays. Up to two internal relay modules can be used simultaneously; additional external relays can also be used.
- 4) A maximum total of two frequency sensors can be used with any input card.
- 5) A total of six digit inputs or four digital inputs with two frequency inputs can be used.
- 6) The 8900 boards are field replaceable.
- 7) The 8900 can be reconfigured with new sensor types by simple reprogramming.

Ordering Information

To build a functional 8900 controller, choose the base unit, power module, and input/output (I/O) module. Additional outputs and relays are available, if needed.

Base Units, Required

3-8900	159 000 868	Base unit with back-lit LCD
--------	--------------------	-----------------------------

I/O (input/output) Modules, Required; Choose One

3-8900.401-1	159 000 870	Dual (2) Input (no outputs)
3-8900.401-2	159 000 871	Dual (2) Input with Two Passive* Loop Outputs
3-8900.401-3	159 000 872	Dual (2) Input with Two Active Loop Outputs
3-8900.401-4	159 000 873	Dual (2) Input with Two Voltage Outputs
3-8900.401-5	159 000 874	Quad (4) Input (no outputs)
3-8900.401-6	159 000 875	Quad (4) Input with Two Passive* Loop Outputs
3-8900.401-7	159 000 876	Quad (4) Input with Two Active Loop Outputs
3-8900.401-8	159 000 877	Quad (4) Input with Two Voltage Outputs
3-8900.401-9	159 000 968	Six Inputs (no outputs)
3-8900.401-11	159 000 970	Six Inputs with Two Active Loop Outputs

Power Modules, Required; Choose One

3-8900.402-1	159 000 878	110/220 VAC Power Module, $\pm 10\%$, regulated
3-8900.402-2	159 000 879	12 to 24 VDC Power Module, $\pm 10\%$, regulated

Optional Output Modules - Choose One

3-8900.405-1	159 000 883	Two Passive* Current Loop Outputs
3-8900.405-2	159 000 884	Two Active Current Loop Outputs

Optional Relay Modules - Choose One or Two

3-8900.403-1	159 000 880	Two Dry Contact Relays
3-8900.403-2	159 000 881	Two Solid State Relays

Optional External Relays - Choose One**

3-8059-4	159 000 772	Four dry-contact relays; requires 12 to 24 VDC $\pm 10\%$, regulated
3-8059-4AC	159 000 773	Four dry-contact relays; requires 100 to 240 VAC $\pm 10\%$, regulated; supplies power to the 12 to 24 VDC $\pm 10\%$, regulated power host device

* Passive outputs require an external power source

** See individual product page for the 8059 External Relay Modules.

Accessories and Replacement Parts

Mfr. Part No.	Code	Description
Mounting		
3-8050.392	159 000 640	¼ DIN retrofit adapter
3-8050.395	159 000 186	Splashproof rear cover
3-0000.596-1	159 000 892	¼ DIN wall mount bracket, 6½ in. (use if no rear cover is installed)
3-0000.596-2	159 000 893	¼ DIN wall mount bracket, 9 in. (use if rear cover is installed)
3-5000.399	198 840 224	Panel adapter, 5 x 5 in. to ¼ DIN
3-5000.598	198 840 225	Surface mount bracket
3-9900.396	159 001 701	Angle adjustment adapter kit
Power Supplies		
7310-1024	159 873 004	24 VDC Power Supply, 10W, 0.42 A,
7310-2024	159 873 005	24 VDC Power Supply, 24W, 1.0 A
7310-4024	159 873 006	24 VDC Power Supply, 40W, 1.7 A
7310-6024	159 873 007	24 VDC Power Supply, 60W, 2.5 A
7310-7024	159 873 008	24 VDC Power Supply, 96W, 4.0 A
Miscellaneous		
3-8050.396	159 000 617	RC filter kit (for relay use), 2 per kit

Signet 0486 Profibus Concentrator

The Signet 0486 Profibus Concentrator allows for simplified connection of Signet sensors to a PROFIBUS network. The 0486 supports six sensor interfaces and a 4 to 20 mA current loop proportional valve interface. The 0486 supports PROFIBUS DPV1 and is available with either DB9 or M12 network connectors.

The 0486 sensor interfaces are multifunctional. All six inputs are compatible with Signet digital (S³L) sensors, four inputs are compatible with frequency output flow sensors, and two inputs are compatible with 4 to 20 mA current loops. The 0486 PLC interface allows for complete control of the Signet sensors. The programmer is able to configure the sensor for the specific needs of their application, read measurements in engineering units, and gather diagnostic data to ensure accuracy and correctness of readings.

In addition to interfacing to Signet sensors the six (S³L) inputs will also support the 8059 four channel relay module allowing for on/off control of GF valves or other devices. Up to six 8059 can be connected to a single 0486 giving the user the ability to control 24 on/off devices.

The proportional valve interface is designed to interface with Georg Fischer electric and pneumatic actuators offering proportional valve positioning control or other 4 to 20 mA current loop devices. The interface will send a 4 to 20 mA current loop to the proportional interface, and read back a 4 to 20 mA current loop signal from the valve to ensure proper valve positioning.

Fail-safe control of valves is built into the 0486. The programmer is able to configure the state of each individual relay, off or on, and the current level of the proportional valve interface in case of communications disruption. This will ensure that the system will fail in a safe, known state.

The 0486 supports diagnostic messaging for the sensors; the programmer can read the state of each sensor to ensure control is based on accurate readings. Mis-wiring, probe failure, or other events will be reported back to the PLC for proper handling and alerting.

Features

- Interface six Signet sensor or relay modules and a proportional valve to a PROFIBUS network with a single service
- Four channels support (S³L) or flow frequency devices
- Two channels support (S³L) or 4 to 20 mA current loops
- One channel for dedicated 4 to 20 mA current loop input and output. Ideal for proportional valve control or other current loop uses
- Support for PROFIBUS DP V1 and DP V0
 - Supports 9.6K to 12M bits/second network speeds
 - System and sensor diagnostic support (DP V1)
 - Fail-safe for 8059 Relay Modules and proportional valve outputs on communication failure
- Simplifies the programming of sensors, saving programming time and reducing errors
- Convenient DIN Rail or surface mountable enclosure

Applications

- Automation Upgrades
- Filter and RO Skids
- Neutralization Systems
- Water and Wastewater Treatment
- Pool and Spa Control
- Aquatic Animal Life Support Systems and Aquaculture

Specifications

General	
Channels	4 channels digital (S ³ L) or frequency input (open collector or sinusoidal)
	2 channels digital (S ³ L) or 4 to 20 mA current loop
	1 channel 4 to 20 mA current loop input/output for valve positioning or current loop uses
Accuracy	Frequency, accuracy ± 0.5% of reading max error @ 25 °C, resolution 1 µS
	4 to 20 mA current loop input, accuracy ± 32 µA @ 25 °C, resolution 16 µA
	4 to 20 mA current loop output, accuracy ± 32 µA @ 25 °C, resolution 6 µA
Terminal Plug Type	Pluggable screw types, 24 to 12 AWG
Enclosure	
Material	Aluminum 6063 T3 and 5052 H32 powder coated
Mounting	Surface (not included)
	35 mm DIN rail mounts (included)
Input Power	
DC	24 VDC ±10% @ 10 W max., 0.40 A max. External Surge Protection is Required, 2KV Common Mode, 1KV Differential Mode
Input Specifications	
Digital (S³L)	Channels 1, 2, 3, 4, 5 and 6
Output Power	5 VDC regulated @ 20 mA
Overcurrent Protected	Each channel independently protected
	A short on a channel will not impair the other channels
Frequency	Channels 1, 2, 3 and 4
Range	1 to 1300 Hz
4 to 20 mA Current Loop Input	Channels 5, 6 and 7
Maximum Voltage	40 VDC
Maximum Current	40 mA
Maximum Voltage Drop	5 VDC
Min. Update Rate	100 mS
Reverse Voltage and Over Current Protected	
Output Specifications	
4 to 20 mA Current Output	Channel 7
Max. Excitation Voltage	24 VDC
Min. Excitation Voltage	12 VDC
Max. Resistance	250 Ω @ 12 VDC
	500 Ω @ 18 VDC
	750 Ω @ 24 VDC
Min. Update Rate	100 mS
Environmental	
Operating Temperature	-10 °C to 70 °C (14 °F to 158 °F)
Storage Temperature	-20 °C to 85 °C (-4 °F to 185 °F)
Relative Humidity	5 to 95% non-condensing

Signet 4630 Chlorine Analyzer System

The Signet 4630 Chlorine Analyzer System is an integrated all-in-one system designed to measure free chlorine. The 3-4630 chlorine panel with pH sensor is used to accurately calculate free chlorine in applications that have varying pH values (± 0.20 pH units).

In applications where the pH is stable, the pH sensor is not required and the pH value is manually entered into the transmitter to calculate the chlorine levels.

The unique integrated clear flow cell combines sensors, flow regulator, filter and variable area flow indicator in one compact unit. An integrated flow regulator with removable filter accepts inlet pressures of 1 to 8 bar (15 to 120 psi), while maintaining constant flow and minimal pressure to the sensors.

Water flows vertically into sensor tip eliminating bubble entrapment. The flow cell is designed to maintain a minimum amount of water to ensure sensors stay submerged, even when the system and flow is turned off.

The Signet 4630 Chlorine Analyzer System allows quick setup and easy installation and is supplied with a 100-240 VAC power supply, two 4 to 20 mA outputs and two dry contact mechanical relays. The flow cell accommodates two sensors: one chlorine and an optional pH sensor.

Features

- EPA 334.0 Compliant
- Reagent free measuring
- Complete panel system allows for quick and easy installation
- Built-in flow regulator maintains constant flow and pressure to the sensors regardless of inlet pressure
- Pre-wired panel includes a 100/240 VAC power supply, two 4 to 20 mA outputs and two mechanical relays
- Optional automatic pH compensation

Applications

Residual Chlorine Monitoring:

- Water Distribution
- Ground Water
- Surface Water
- HVAC Applications (cooling water)
- Food and Beverage
- Swimming Pools
- Aquariums
- Water Parks

EPA Compliant According to Method 334.0

The 3-4630 chlorine system can be used for reporting chlorine residuals in accordance with EPA Method 334.0

Signet 4632 Chlorine Dioxide Analyzer System

The Signet 4632 Chlorine Dioxide Analyzer System is an integrated all-in-one system designed to measure Chlorine dioxide residual up to 2 ppm/mg/L.

The unique integrated clear flow cell combines sensors, flow regulator, filter and variable area flow indicator in one compact unit. An integrated flow regulator with removable filter accepts inlet pressures of 1 to 8 bar (15 to 120 psi), while maintaining constant flow and minimal pressure to the sensors.

Water flows vertically into sensor tip eliminating bubble entrapment. The flow cell is designed to maintain a minimum amount of water to ensure sensors stay submerged, even when the system and flow is turned off.

The Signet 4632 Chlorine Dioxide Analyzer System allows quick setup and easy installation and is supplied with a 100-240 VAC power supply, two 4 to 20 mA outputs and two dry contact mechanical relays.

Features

- Reagent free measuring
- Complete panel system allows for quick and easy installation
- Built-in flow regulator maintains constant flow and pressure to the sensors regardless of inlet pressure
- Pre-wired panel includes a 100/240 VAC power supply, two 4 to 20 mA outputs and two mechanical relays

Applications

Residual Chlorine Monitoring:

- Cooling Towers
- Fruit and Vegetable Washing
- Water Distribution
- Wastewater Odor Control
- Poultry and Meat Processing
- UPW Treatment
- Hospital and Healthcare Facilities

Signet 8630 Chlorine Transmitter

Member of the ProcessPro® Family of Transmitters

The Signet 3-8630-3P ProcessPro Chlorine Transmitter simultaneously displays free chlorine or chlorine dioxide and pH levels on a bright LCD backlight display.

The 8630 transmitter has two 4 to 20 mA outputs that can be programmed to transmit chlorine or pH information to a data collection device.

Two dry-contact mechanical relays can be used to deliver an alarm signal or activate a chlorine dosing system.

Programming is simple and easy with Signet's standard 4-button keypad. The menu option allows the use of an optional pH sensor to accurately measure pH for display purposes or to calculate free chlorine levels. Select "Manual pH input" and enter the applications stable pH level to determine free chlorine levels.

Features

- Displays free chlorine 0 to 20 ppm (mg/l), chlorine dioxide 0 to 2 ppm (mg/l) and pH 0-14
- Two programmable 4 to 20 mA outputs
- Two mechanical relays
- Temperature and pH compensation
- Displays diagnostic information from sensor memory
- Simple setup and easy customization
- Backlit LCD display

Applications

Residual Chlorine Monitoring:

- **Water Distribution**
- **Ground Water**
- **Surface Water**
- **HVAC Applications (cooling water)**
- **Food and Beverage**
- **Swimming Pools**
- **Aquariums**
- **Water Parks**

Signet 2630 Amperometric Chlorine Electrode

The Signet 2630 Amperometric Chlorine electrode is designed to measure free chlorine in fresh water treatment applications. The electrode is available with a measurement range of 0.02 to 2 ppm, 0.05 to 5 ppm or 0.1 to 20 ppm. This electrode requires the Signet 2650 Amperometric Electronics module to communicate with the Signet 8630-3P Chlorine Transmitter.

Utilizing smart-sensor technology, this electrode has a unique embedded memory chip and can communicate a wide variety of information to the Signet 2650 electronics and Signet 8630-3P Transmitter.

Displayed information includes electrode type, factory calibration data, service time, chlorine range, high and low pH (with optional Signet pH electrode), temperature values and more.

Signet's patented DryLoc® connector provides quick assembly and a secure connection. Gold-plated contacts and an O-ring seal ensure a waterproof and reliable interconnect to the Signet 2650 Amperometric Electronics.

The Signet 2630 Amperometric Chlorine Electrode has an integrated temperature element for automatic temperature compensation.

Features

- Embedded memory chip accessible via the Signet 8630 transmitter
- Quick assembly with Signet's patented DryLoc® connector
- Integrated temperature element for automatic temperature compensation
- Separate drive electronics (Signet 2650), for easy electrode replacement without running new cable

Applications

Residual Chlorine Monitoring:

- Water Distribution
- Ground Water
- Surface Water
- HVAC Applications (cooling water)
- Boiler Feed Water
- Food and Beverage
- Swimming Pools
- Aquariums
- Water Parks

System Overview

Application Tips

- The sensors should not be used in water containing surfactants, oils, organic chlorine or stabilizers such as cyanuric acid.

Ordering Notes

The sensor must have a stable and constant flow of water past its membrane for accurate free chlorine measurement. Typical flow rate should be 30.24 - 45.36 lph (8 - 12 gph).

Signet 2632 Amperometric Chlorine Dioxide Electrode

The Signet 2632 Amperometric Chlorine Dioxide electrode is designed to measure chlorine dioxide residual in water treatment applications. The electrode is available with a measurement range of 0 to 2 ppm. This electrode requires the Signet 2650 Amperometric Electronics module to communicate with the Signet 8630-3P Chlorine Transmitter.

Utilizing smart-sensor technology, this electrode has a unique embedded memory chip and can communicate a wide variety of information via the Signet 2650 electronics to the Signet 8630-3P Transmitter. The 8630 displayed information includes electrode type, factory calibration data, service time, chlorine range, high and low pH (with optional Signet pH electrode), temperature values and more.

Signet's patented DryLoc® connector provides quick assembly and a secure connection. Gold-plated contacts and an O-ring seal ensure a waterproof and reliable connection to the Signet 2650 Amperometric Electronics.

The Signet 2632 Amperometric Chlorine Dioxide Electrode has an integrated temperature element for automatic temperature compensation.

Features

- Embedded memory chip accessible via the Signet 8630 transmitter
- Quick assembly with Signet's patented DryLoc® connector
- Integrated temperature element for automatic temperature compensation
- Separate drive electronics (Signet 2650), for easy electrode replacement without running new cable

Applications

Residual Chlorine Monitoring:

- Cooling Towers
- Ground Water
- Fruit and Vegetable Washing
- Water Distribution
- Wastewater Odor Control
- Poultry and Meat Processing
- UPW Treatment
- Hospital and Healthcare Facilities

Signet 2650 DryLoc® Amperometric Electronics

The Signet 2650 Amperometric Electronics provide the polarization voltage and signal conditioning required by all Signet Amperometric Sensors. The 2650 Amperometric Electronics also relays important sensor information that is stored on a memory chip inside the sensor to be displayed on the 3-8630-3P transmitter. Information includes factory calibration data, service life, calibration information and more.

Signet's patented DryLoc® connector provides a quick and secure connection to the sensor. Gold-plated contacts and an O-ring seal ensure a waterproof and reliable interconnect to the sensor.

Sensor maintenance, replacement and troubleshooting has never been easier. The DryLoc electronics can be separated from the sensor, which allows the user to detect a faulty sensor, electronics or cable assembly.

Features

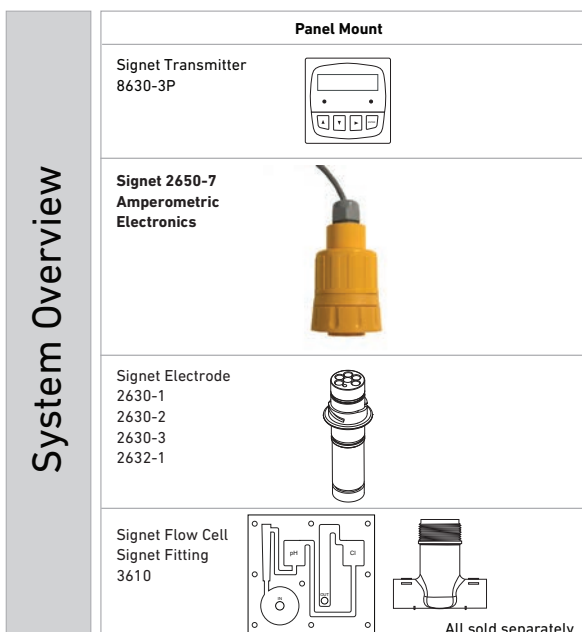

- Conditions the signal from the 2630 sensor and provides sensor stored data to the Chlorine transmitter
- Patented DryLoc® connector provides a quick and secure connection to the sensor
- Waterproof and reliable interconnect to the sensor
- Easy sensor replacement without running new cable
- Easy sensor removal for servicing

Applications

Residual Chlorine Monitoring:

- Water Distribution
- Ground Water
- Surface Water
- HVAC Applications (cooling water)
- Gray Water Dechlorination
- Food and Beverage
- RO Membrane Protection
- Swimming Pools
- Aquariums
- Water Parks

U.S. Patent No.: 6,666,701

Specifications

General		
Compatibility	All Signet Amperometric DryLoc Sensors	
	Signet 3-8630-3P Chlorine Transmitter	
	All 3-4630 Chlorine panel assemblies	
Mounting	DryLoc connection	
Materials	Valox® (PBT)	
Cable	4.6 m (15 ft) 3 conductor shielded, 22 AWG	
Performance		
Electronics Accuracy	< 5 nA or 1% of reading, whichever is greater @ 25 °C over full input range	
Temperature	±1.0 °C (Pt1000) over full operation range (when calibrated at ambient temperature)	
Update Rate	500 ms	
Operational Range	±450 mV	
Resolution	0.1 nA

Signet 2750-7 pH Electronics

The Signet 2750-7 pH Electronics conditions the output signal from the Signet 2724 pH Electrode and provides a Digital (S³L) signal to the Signet 8630, 8900, and 9900 instruments.

Signet's patented DryLoc[®] connector provides a quick and secure connection to the sensor. Gold-plated contacts and an O-ring seal ensure a waterproof and reliable interconnect to the sensor.

Sensor maintenance, replacement and troubleshooting has never been easier. The DryLoc electronics can be separated from the sensor, which allows the user to detect a faulty sensor, electronics or cable assembly.

Features

- Amplifies the output from the pH electrode and converts it to a reliable digital (S³L) signal
- Patented DryLoc[®] connector provides a quick and secure connection to the sensor
- Waterproof and reliable interconnect to the sensor
- Easy sensor replacement without running new cable
- Easy sensor removal for servicing

Applications

- Water and Wastewater Treatment
- Effluent Monitoring
- Surface Water
- HVAC Applications (cooling water)
- Sanitization Systems
- Food and Beverage
- Pool and Spa Control
- Aquatic Animal Life Support Systems
- Water Parks

Signet 2610 Process Optical Dissolved Oxygen Sensor

Gen II

The Signet 2610 RDO® Pro is a rugged, reliable sensor designed to deliver accurate dissolved oxygen (DO) data across a wide measuring range while reducing maintenance costs. It features the latest optical technology for DO measurement and eliminates the replacement of membrane and reference solutions.

The Signet 2610 optical sensor cap is calibrated at the factory and requires no field calibration. The optical measurement technology resists abrasion and bleaching allowing for a long life in many harsh applications. The DO sensor has a built in Modbus RS485 and 4 to 20 mA current loop outputs for ease of interface to existing control systems. The 3-2610-51 version includes the Signet digital (S³L) interface for direct connection with the 9900 SmartPro® Transmitter, 9950 SmartPro® Dual Channel Transmitter and 8900 Multi-Parameter Controller.

Additional features include a 10 m (32.8 ft) cable with stripped and tinned ends as well as a titanium temperature sensor for improved compatibility in salt water applications.

Features

- Two year measurement cap life
- Optical DO measurement, no flow requirements
- Rugged construction
- Calibration built into the measurement cap
2% of range 0 to 20 mg/l
- No membranes or filling solutions
- Flexible communications
Digital (S³L), 4 to 20 mA or Modbus
- Measurement Range: 0 to 20 mg/L,
in-line or submersible
- 3-2610-51 compatible with 9900 SmartPro Transmitter, 9950 SmartPro Dual Channel Transmitter and 8900 Multi-Parameter Controller

Applications

- Municipal and Industrial Wastewater Treatment
- Drinking Water Reservoir Monitoring
- Environmental Water Discharge Monitoring
- Aquatic Life Support

System Overview

Panel Mount	Pipe, Tank, Wall	4 to 20 Input	Automation System	In-line Installation

Signet 2610-51 Process Optical Dissolved Oxygen Sensor 				
All sold separately				

Specifications

General	
Sensor Type	Luminescent dissolved oxygen sensor
Transmitter/Local Display	Optional, not required. Compatible with 8900 and SmartPro instruments
Communications Options	Digital (S ³ L), 4 to 20 mA, Modbus (RS485)
Maximum Cable Length	Modbus and 4 to 20 mA: up to 1,219 m (4,000 ft) Digital (S ³ L): 38 m (125 ft)
Internal Mounting Thread	1 1/4 NPT
Power Requirements	12 to 24 VDC ±10% regulated
4 to 20 mA output span	0 to 20 mg/L
Performance	
Salinity Range	0 to 42 PSU, fixed or real-time capable
pH Range	2 to 10 pH
Barometric Range	507 to 1,115 mbar, fixed or real-time capable
Maximum Pressure	300 psi
Range	0 to 20 mg/L concentration, 0 to 200% saturation
Accuracy (DO)	±0.1 mg/L, 0 to 8 mg/L, ±0.2 mg/L, 8 to 20 mg/L
Response Time of Cap	T90: 30 sec T95: 37 sec @ 25 °C
Repeatability	0.05 mg/L
Resolution	0.01 mg/L
Environmental	
Wetted Materials	ABS, Titanium and FKM
Usage Life of Cap	2 years from the first instrument reading
Shelf Life of Cap	24 months from date of manufacture (install within 12 mo. of manufacture)
Operating Temperature	0 °C to 50 °C 32 °F to 122 °F
IP Rating	IP-67 with cap off, IP-68 with cap installed
Compliance	Heavy industrial, IEC 61000-6-2:2005
Storage Conditions, Cap	1 °C to 60 °C 33 °F to 140 °F, in factory container
Storage Conditions, Sensor	-5 °C to 60 °C 23 °F to 140 °F
Warranty	
Sensor	3 years from date of manufacture
Standards and Approvals	
	CE, FCC
	RoHS Compliant, China RoHS

Signet 4150 Turbidimeter

The Signet 4150 Turbidimeter system provides accurate and reliable compliant water quality monitoring for municipal and industrial applications.

The 4150 measures turbidity via a 90 degree light which reflects particles as they flow through a small volume, low flow glass cuvette. Air bubbles are eliminated from the cuvette by adjusting the backpressure valve on the outlet tube. The cuvette is located in a watertight dark chamber for continuously accurate on-line measurement. A replaceable desiccant pack provides a dry-stable environment to ensure reliable measurements.

Simple and fast calibration can be accomplished in under five minutes by placing the in-line glass cuvette from the measuring chamber into the cuvette holder while still in service and the inlet and outlet tubing remains connected. The inexpensive calibration standard allows for dry and multiple system calibrations without mixing chemicals. After calibration, the unit is up and running with simple re-insertion of the glass cuvette back into the measuring chamber.

Additional features include a message indicator when the desiccant needs replacing and as an option, auto/ ultrasonic cleaning of the glass in-line cuvette for longer runs between maintenance.

The 4150 is available in two measuring ranges. The 0 to 100 NTU/FNU version is for low range applications such as drinking water. The 0 to 1000 NTU/FNU range can be used for various applications including raw water and wastewater reclamation.

Features

- Simple and easy single unit installation with built-in pressure regulator
- Versions compliant with either U.S. EPA 180.1 for North and South America and Asia or ISO 7027 for Europe
- Time saving and efficiencies of cuvette technology simplifies calibration
- Spannable 4 to 20 mA output or RS 485 output
- Two adjustable alarm relays
- Bright backlit display
- Easy access for wiring and maintenance
- Ultrasonic cleaning option ensures long and steady on-line measurement
- Inexpensive standards allow for multiple system calibrations

Applications

- Monitor Filter Performance
- Raw or Filtered Water
- Municipal Water Distribution
- Wastewater Reclamation and Tertiary Effluent
- Aquatic Life Support

Specifications

General	
Flow Rate Range	0.1 L/min to 1 L/min (0.026 GPM to 0.26 GPM)
Measurement Range	0 to 100.0 NTU/FNU or 0 to 1000.0 NTU/FNU
Accuracy	±2% of reading or ±0.02 NTU/FNU below 40 NTU/FNU whichever is greater ±5% of reading above 40 NTU/FNU NTU = FNU = FTU
Mounting	
	Horizontal plane, integral mounting bracket (with standard hole pattern) Use 8 mm (5/16") OD, 5 mm (3/16") ID flexible tubing for the water supply/outlet (customer supplied)
Resolution	
	up to 0.0001 NTU/FNU (below 10 NTU/FNU)
Display	
	Two-Line LCD w/backlight
Alarm Relays	
	120-240 VAC, 2A Form C Relay
Analog Signal w/Field Selectable Range	
	Active 4-20 mA, 600 Ω or RS485
Wetted Materials	
Tubing	Vinyl
Measuring Cuvette	Borosilicate Glass
Glass Washer Seal	Silicone
Pressure Regulator	Polypropylene 316 stainless steel (acetal)
Inlet Tube	316 stainless steel
Maximum Inlet Pressure	
	345 kPa (50 psi) based on tubing connection provided Pressure regulator rated up to 200 psi 50 PSI limit for tubing connector
Power Supply	
	100 – 240 VAC, 47 – 63 Hz, 80 VA
Insulation Rating	
	Double Insulated Pollution Degree 2 Overvoltage Category II
Altitude	
	2000 meters (6,561 ft) maximum
Relative Humidity	
	Maximum 95% RH non-condensing
Enclosure Rating	
Power Supply Box	NEMA 4X / IP66
Operating Temperature/Pressure	
	1 °C to 50 °C 34 °F to 122 °F (5 to 15 psig) 35 to 104 kPa
Environmental Conditions	
	Not recommended for outdoor use
Shipping Weight	
	2.5 kg 5.5 lb
Standards and Approvals	
	CE, FCC RoHS compliant, China RoHS Compliant to U.S. EPA 180.1 for white light Compliant to PN EN ISO 7027 for infrared light ETL Listed UL 61010-1 and cETL, CSA C22.2 No. 61010-1

Signet 515 Rotor-X Paddlewheel Flow Sensors

Simple to install with time-honored reliable performance, Signet 515 Rotor-X Paddlewheel Flow Sensors are highly repeatable, rugged sensors that offer exceptional value with little or no maintenance. The wide dynamic flow range of 0.3 to 6 m/s (1 to 20 ft/s) allows the sensor to measure liquid flow rates in full pipes and can be used in low pressure systems.

The Model 515 sensors are offered in a variety of materials for a wide range of pipe sizes and insertion configurations. The many material choices including PP and PVDF make this model highly versatile and chemically compatible to many liquid process solutions. Sensors can be installed in up to DN900 (36 in.) pipes using Signet's comprehensive line of custom fittings. These custom fittings, which include tees, saddles, and weldolets, seat the sensor to the proper insertion depth into the process flow. The sensors are also offered in configurations for wet-tap installation requirements.

Features

- Operating range 0.3 to 6 m/s (1 to 20 ft/s)
- Wide turndown ratio of 20:1
- Highly repeatable output
- Simple, economical design
- Installs into pipe sizes DN15 to DN900 (½ to 36 in.)
- Self-powered/no external power required
- Test certificate included for -X0, -X1
- Chemically resistant materials

Certified to
NSF/ANSI 61 & 372

(P51530-PX
version only)

Applications

- Pure Water Production
- Filtration Systems
- Chemical Production
- Liquid Delivery Systems
- Pump Protection
- Scrubber Systems
- Water Monitoring
- Not suitable for gases

Specifications

General		
Operating Range	0.3 to 6 m/s	1 to 20 ft/s
Pipe Size Range	DN15 to DN900	½ to 36 in.

For overview of Wet-Tap System, see 3519 product page

Application Tips

- Use the Conduit Adapter Kit to protect the cable-to-sensor connection when used in outdoor environments. See Accessories section for more information.
- Use a sleeved rotor in abrasive liquids to reduce wear.
- Sensor plug can be used to plug installation fitting after extraction of sensor from pipe.
- For liquids containing ferrous particles, use Signet Magmeters.
- For systems with components of more than one material, the maximum temperature/pressure specification must always be referenced to the component with the lowest rating.

Temperature/Pressure Graphs

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification. When using a PVDF sensor in a PVC piping system, the fitting will reduce the system specification.

Ordering Notes

- 1) Most common part number combinations shown. For all other combinations contact factory.
- 2) Other rotor and pin materials are available for purchase from the factory and can be easily replaced in the field. See Accessories section.

Ordering Information

Model 515 Standard Mount Paddlewheel

When choosing this style of sensor, the instrument can be mounted nearby on a pipe or wall or in a remote location up to 61 m (200 ft) by connecting the sensor through a standard 3-8050-1 universal junction box. Standard cable length is 7.6 m (25 ft). Use Signet fittings for proper seating of the sensor into the process flow.

Mfr. Part No.	Code	Body	Rotor	Pin Material
Paddlewheel Flow Sensor for use with remote mount instrument				
Pipe size DN15 to DN100 - ½ to 4 in.				
P51530-H0	198 801 659	Polypropylene	Black PVDF	Hastelloy-C
P51530-P0	198 801 620	Polypropylene	Black PVDF	Titanium
P51530-S0	198 801 661	Polypropylene	Black PVDF	Natural PVDF
P51530-T0	198 801 663	Natural PVDF	Natural PVDF	Natural PVDF
P51530-V0	198 801 623	Natural PVDF	Natural PVDF	Hastelloy-C
Pipe size DN125 to DN200 - 5 to 8 in.				
P51530-P1	198 801 621	Polypropylene	Black PVDF	Titanium
P51530-T1	198 801 664	Natural PVDF	Natural PVDF	Natural PVDF
P51530-V1	198 801 624	Natural PVDF	Natural PVDF	Hastelloy-C
Pipe size DN250 - DN900 - 10 to 36 in.				
P51530-P2	198 801 622	Polypropylene	Black PVDF	Titanium
P51530-V2	198 801 625	Natural PVDF	Natural PVDF	Hastelloy-C

Ordering Information (continued)

Model 515 Integral Mount Paddlewheel

When choosing this style of sensor, the instrument is mounted directly onto the sensor for a local display. See guideline below for instructions.

Mfr. Part No.	Code	Body	Rotor	Pin Material
Flow sensor for integral mounting on the 8150 or 9900 instrument using the 3-8051-X flow sensor integral mounting kit (sold separately)				
DN15 to DN100 - ½ to 4 in.				
3-8510-P0	198 864 504	Polypropylene	Black PVDF	Titanium
3-8510-T0	159 000 622	Natural PVDF **	Natural PVDF	Natural PVDF
3-8510-V0	198 864 506	Natural PVDF **	Natural PVDF	Hastelloy-C
DN125 to DN200 - 5 to 8 in.				
3-8510-P1	198 864 505	Polypropylene	Black PVDF	Titanium

**PVDF available ½ in. to 4 in. only

Combining a 515 Integral mount flow sensor with an integrally mounted instrument

Option 1

Once an integral mount sensor is chosen, it can be mounted directly to a field mount transmitter by following these guidelines:

- Order the 3-8051-X flow sensor integral mounting kit (sold separately) to connect the sensor to an instrument.
- Order a field mount transmitter (sold separately). The following part numbers are compatible: 3-8150-1, 3-9900-1.

c) Assembling the sensor with the integral adapter and instrument is quick and simple.

Option 2

These parts can also be ordered as an assembled part. See "Integral Mount" for more information.

Model 515 Wet-Tap Mount Paddlewheel Flow Sensor

When choosing this style of sensor, the instrument can be mounted nearby on a pipe or wall or in a remote location up to 61 m (200 ft) by connecting the sensor through a standard 3-8050-1 universal junction box. Standard cable length is 7.6 m (25 ft). This style of sensor uses the 3519 Wet-Tap valve only (see individual product page for more information).

Mfr. Part No.	Code	Body	Rotor	Pin Material
Flow Sensor for wet-tap mounting with the 3519 Wet-Tap Valve (sold separately)				
DN15 to DN100 - ½ to 4 in.				
P51530-P3	198 840 310	Polypropylene	Black PVDF	Titanium
DN125 to DN200 - 5 to 8 in.				
P51530-P4	198 840 311	Polypropylene	Black PVDF	Titanium
DN250 to DN900 - 10 to 36 in.				
P51530-P5	198 840 312	Polypropylene	Black PVDF	Titanium

Combining a 515 Wet-Tap Sensor with a 3519 Wet-Tap Valve

- Sensor can be mounted in a 3519 Wet-Tap Valve (sold separately)
- Assembling a sensor with a 3519 Wet-Tap valve is quick and simple. These parts can also be ordered as complete assemblies. See 3519 product page.

Please refer to Wiring, Installation, Accessories and Fittings sections for more information.

Signet 525 Metalex Paddlewheel Flow Sensor

The Signet 525 Metalex Paddlewheel Flow Sensor combines stainless steel construction with insertion paddlewheel technology. The result is a highly reliable sensor suitable for operation at extreme pressures and temperatures. The Tungsten Carbide shaft and carbon fiber reinforced PTFE bearing provides excellent wear resistance for extended service.

A comprehensive fitting program allows installation in steel lines with the mini-block for small diameters, and either the mini-tap or saddle for pipes up to DN300 (12 in.). The self-generating output signal allows use with the battery operated flow totalizer 8150.

Features

- For up to 103 bar (1500 psi @ safety factor 1.5) pressure
- For up to 149 °C (300 °F) temperature
- DN15 to DN300 (½ to 12 in.) pipe range
- Simple installation
- Self-powered/no external power required
- 316 SS body
- Tungsten Carbide or SS shaft
- 7.6 m (25 ft) cable included
- Operating range 0.5 to 6 m/s (1.6 to 20 ft/s)

Applications

- Boiler Feedwater Monitoring
- HVAC
- Chemical Transport
- Heat Exchangers
- Reverse Osmosis
- Cooling Systems
- Not suitable for gases

Specifications

General			
Operating Range	0.5 to 6 m/s	1.6 to 20 ft/s	
Pipe Size Range	DN15 to DN300	½ to 12 in.	
Linearity	±1% of max. range @ 25 °C (77 °F)		
Repeatability	±0.5% of max. range @ 25 °C (77 °F)		
Min. Reynolds Number Required	4500		
Wetted Materials			
Sensor Body	316 SS (ACI type CF-8M per ASTM A351), DIN 17440		
Rotor Material	17-4PH-1 Stainless Steel		
Rotor Pin	Tungsten Carbide GRP 1 or 316 stainless steel		
Retainers (2)	316 stainless steel (1.4401)		
Rotor Bearings (2)	Carbon fiber reinforced PTFE		
Gasket	KLINGER® sil C-4401 (supplied with fitting)		
Electrical			
Frequency	39 Hz per m/s nominal	12 Hz per ft/s nominal	
Amplitude	5 to 8 mV p-p per Hz		
Source Impedance	11.6 KΩ		
Cable Length	7.6 m (25 ft), can be extended up to 61 m (200 ft)		
Cable Type	Cable (per foot) 2 cond. w/shield, 22 AWG		
Max. Temperature/Pressure Rating			
Socket Weld or Weld-On Mini-Tap Fittings	103 bar (1500 psi @ safety factor 1.5) @ 149 °C (300 °F)		
Strap-on Saddle Fitting	21 bar (305 psi) @ 66 °C (151 °F)		
Operating Temperature	-18 °C to 149 °C	0 °F to 300 °F	
Shipping Weight			
	P525-1/-1S	0.723 kg	1.6 lb
	P525-2/-2S	0.774 kg	1.7 lb
Standards and Approvals			
	RoHS compliant, China RoHS		
	Manufactured under ISO 9001 for Quality and ISO 14001 for Environmental Management and OHSAS 18001 for Occupational Health and Safety

Signet 2536 Rotor-X Paddlewheel Flow Sensors

PVC
Sensor
(gray body
and cap)

Standard
Sensor
(blue cap)

Integral
Sensor

Wet-Tap
Sensor

Simple to install with time-honored reliable performance, Signet 2536 Rotor-X Paddlewheel Flow Sensors are highly repeatable, rugged sensors that offer exceptional value with little or no maintenance. The Model 2536 has a process-ready open collector signal with a wide dynamic flow range of 0.1 to 6 m/s (0.3 to 20 ft/s). The sensor measures liquid flow rates in full pipes and can be used in low pressure systems.

The Signet 2536 sensors are offered in a variety of materials for a wide range of pipe sizes and insertion configurations. The many material choices including PP and PVDF make this model highly versatile and chemically compatible to many liquid process solutions.

Sensors can be installed in DN15 to DN900 (½ to 36 in.) pipes (except the 2536 PVC versions, which can be installed in DN15 to DN100 (½ to 4 in.) pipes), using Signet's comprehensive line of custom fittings. These custom fittings, which include tees, saddles, and weldolets, seat the sensor to the proper insertion depth into the process flow. The sensors are also offered in configurations for wet-tap installation requirements.

Features

- Operating range 0.1 to 6 m/s (0.3 to 20 ft/s)
- Wide turndown ratio of 66:1
- Open-collector output
- Highly repeatable output
- Simple, economical design
- Installs into pipe sizes DN15 to DN900 (½ to 36 in.)
- PVC 2536 version DN15 to DN100 (½ to 4 in.) for concentrated Sodium Hypochlorite 12.5% applications
- High resolution and noise immunity
- Test certificate included for -X0, -X1
- Chemically resistant materials

Certified to
NSF/ANSI 61 & 372

(3-2536-PX
version only)

Applications

- Pure Water Production
- Filtration Systems
- Chemical Production
- Liquid Delivery Systems
- Pump Protection
- Scrubber/Gas Stacks
- Gravity Feed Lines
- Not suitable for gas
- Sodium Hypochlorite transfer/
injection/batching (3-2536-U0)

Specifications

Application Tips

- Use the Conduit Adapter Kit to protect the cable-to-sensor connection when used in outdoor environments. See Accessories section for more information.
- Use a sleeved rotor in abrasive liquids to reduce wear.
- Sensor plug can be used to plug installation fitting after extraction of sensor from pipe.
- For liquids containing ferrous particles, use Signet Magmeters.
- For systems with components of more than one material, the maximum temperature/pressure specification must always be referenced to the component with the lowest rating.

Temperature/Pressure Graphs

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification. When using a PVDF sensor in a PVC piping system, the fitting will reduce the system specification.

Ordering Notes

- 1) Most common part number combinations shown. For all other combinations contact factory.
- 2) Other rotor and pin materials are available for purchase from the factory and can be easily replaced in the field. See Accessories section.

Ordering Information

Model 2536 Standard Mount Paddlewheel

When choosing this style of sensor, the instrument can be mounted nearby on a pipe or wall or in a remote location up to 305 m (1000 ft) by connecting the sensor through a standard 3-8050-1 universal junction box. Standard cable length is 7.6 m (25 ft). Use Signet fittings for proper seating of the sensor into the process flow.

Mfr. Part No.	Code	Body	Rotor	Pin Material
Flow Sensor for use with remote mount instrument				
DN15 to DN100 - ½ to 4 in.				
3-2536-P0	198 840 143	Polypropylene	Black PVDF	Titanium
3-2536-T0	198 840 149	Natural PVDF	Natural PVDF	Natural PVDF
3-2536-U0	159 001 843	PVC	Sleeved ETFE	Titanium
3-2536-V0	198 840 146	Natural PVDF	Natural PVDF	Hastelloy-C
DN125 to DN 200 - 5 to 8 in.				
3-2536-P1	198 840 144	Polypropylene	Black PVDF	Titanium
3-2536-V1	198 840 147	Natural PVDF	Natural PVDF	Hastelloy-C
DN250 to DN900 - 10 to 36 in.				
3-2536-P2	198 840 145	Polypropylene	Black PVDF	Titanium

Ordering Information (continued)

Model 2536 Integral Mount Paddlewheel

When choosing this style of sensor, the instrument is mounted directly onto the sensor for a local display. See guidelines below for instructions.

Mfr. Part No.	Code	Body	Rotor	Pin Material
Flow sensor for integral mounting on the 8150 instrument using the 3-8051-X Flow Sensor Integral Mount Kit (sold separately)				
DN15 to DN100 - ½ to 4 in.				
3-8512-P0	198 864 513	Polypropylene	Black PVDF	Titanium
3-8512-T0	198 864 518	Natural PVDF**	Natural PVDF	Natural PVDF
3-8512-V0	198 864 516	Natural PVDF**	Natural PVDF	Hastelloy-C
DN125 to DN200 - 5 to 8 in. (PP only)				
3-8512-P1	198 864 514	Polypropylene	Black PVDF	Titanium

**Natural PVDF available ½ in. to 4 in. only

Guidelines: Combining a 2536 integral mount flow sensor with an integrally mounted instrument

Once an integral mount sensor is chosen, it can be mounted directly to a field mount transmitter by following these guidelines:

- Order the 3-8051-X flow sensor integral mounting kit (sold separately) to connect the sensor to an instrument.
- Order a field mount transmitter (sold separately). The following part numbers are compatible: 3-9900-1.
- Assembling the sensor with the integral adapter and instrument is quick and simple.

Model 2536 Wet-Tap Mount Paddlewheel Flow Sensor

When choosing this style of sensor, the instrument can be mounted nearby on a pipe or wall or in a remote location up to 305 m (1000 ft) by connecting the sensor through a standard 3-8050-1 universal junction box. Standard cable length is 7.6 m (25 ft). This style of sensor uses the 3519 Wet-Tap valve only (see individual product page for more information).

Mfr. Part No.	Code	Body	Rotor	Pin Material
Flow Sensor for Wet-Tap mounting with the 3519 Wet-Tap Valve (sold separately)				
DN15 to DN100 - ½ to 4 in.				
3-2536-P3	159 000 758	Polypropylene	Black PVDF	Titanium
DN125 to DN200 - 5 to 8 in.				
3-2536-P4	159 000 759	Polypropylene	Black PVDF	Titanium
DN250 to DN900 - 10 to 36 in.				
3-2536-P5	159 000 760	Polypropylene	Black PVDF	Titanium

Guideline: Combining a 2536 Wet-Tap Sensor with a 3519 Wet-Tap Valve

- Once a sensor is chosen, it can be mounted in a 3519 Wet-Tap Valve (sold separately)
- Assembling a sensor with a 3519 Wet-Tap valve is quick and simple. These parts can also be ordered as complete assemblies. See 3519 product page.

Model 2536 Ordering Notes

Other rotor and pin materials are available for purchase from the factory and can be easily replaced in the field. See Accessories section.

Please refer to **Wiring, Installation, Accessories and Fittings** sections for more information.

Signet 2537 Paddlewheel Flowmeter

The Signet 2537 Flowmeter is the next generation in fluid measurement technology from the inventor of the original paddlewheel flowmeter. This sensor is an improvement on what's already an industry standard. It has the added functionality of various output options including flow switch, multi-functional pulse, digital (S³L) or 4 to 20 mA. Additionally, it offers low flow, low power and high resolution and can be configured on-site directly through the built-in user interface.

Installation is simple because the Signet 2537 utilizes the same fittings as the popular Signet 515 and 2536 Paddlewheel Sensors and fits into pipe sizes ranging from DN15 to DN200 (½ to 8 in.). Available in Polypropylene and PVDF, it is ideal for a variety of applications including chemical processing, water and wastewater monitoring and scrubber control.

Features

- Digital (S³L) or 4 to 20 mA outputs or (Multi-function)
- Allows for up to six sensors to Signet 8900 Multi-Parameter Controller
- Low flow capabilities down to 0.1 m/s (0.3 ft/s)
- Polypropylene or PVDF sensor bodies
- Polypropylene and PVDF retaining nuts standard, Valox optional
- Installs into pipe sizes DN15 to DN200 (½ to 8 in.)
- Test certificate included for -X0, -X1
- Low power and high resolution

Certified to
NSF/ANSI 61 & 372

(3-2537-XC-PX
version only)

Applications

- Process Flow Monitoring
- Pump Protection
- Pure Water Production
- Filtration Systems
- Chemical Production
- Reverse Osmosis
- Demineralization/Regeneration
- Fume Scrubbers
- Cooling Towers
- Proportional Metering Pump

Specifications

General				
Operating Range	0.1 m/s to 6 m/s	0.3 ft/s to 20 ft/s		
Pipe Size Range	DN15 to DN200	½ to 8 in.		
Linearity	±1% of max. range @ 25 °C (77 °F)			
Repeatability	±0.5% of max. range @ 25 °C (77 °F)			
System Response	100 ms update rate nominal			
Wetted Materials				
Sensor Body	Glass-filled PP (black) or PVDF (natural)			
O-rings	FKM (std) optional EPR (EPDM) or FFKM			
Rotor Pin	Titanium, Hastelloy-C or PVDF; optional Ceramic, Tantalum or Stainless Steel			
Rotor	Black PVDF or Natural PVDF; optional ETFE, with or w/o carbon fiber reinforced PTFE sleeve for rotor pin			
Electrical				
Multi	With Dry-Contact Relay	24 VDC nominal, ±10%, regulated, 30 mA max current		
	With Solid-State Relay	6 V to 24 VDC, ±10%, regulated, 30 mA max current		
	Digital (S ³ L)	5.0 VDC min to 6.5 VDC max., 30 mA max current (1.5 mA nominal)		
	4 to 20 mA	400 mV max ripple voltage, 30 mA max current		
	Maximum Pulse Rate	300 Hz		
	Maximum Pulse Width	50 ms		
	Minimum Pulse Rate	0.5 Hz		
	Compatible with PLC, PC or similar equipment Compatible with customer supplied metering pump			
Digital (S ³ L) Version	5 VDC nominal, regulated, 3 mA max current			
	Type	Serial ASCII, TTL level 9600 bps		
	Max. Cable Length	Refer to Signet 8900 wiring specifications.		
	Compatible with Model Signet 8900, 9900 and 9950			
4 to 20 mA Version	12 to 32 VDC nominal, ±10%, regulated, 21 mA max current			
	Loop Accuracy	±32 µA @ 25 °C @ 24 VDC)		
	Loop Resolution	5 µA		
	Temp. Drift	±1µA per °C max.		
	Power Supply Rejection	±1µA per V		
	Max. Cable	305 m	1000 ft	
	Maximum Loop Resistance	600 Ω @ 24 VDC	1 KΩ @ 32 VDC	
	Load Impedance	375 Ω		
Reverse Polarity and Short Circuit Protected	Up to 40 V, 1 hour			
Over-voltage Protection	> 40 VDC over 1 hour			
Relay Specifications				
	Mechanical SPDT	5 A @ 30 VDC, 5 A @ 250 VAC		
	Solid-State Relay	100 mA @ 40 VDC, 70 mA @ 33 VAC		
	Relay Modes	Low, High		
	Time Delay	0.0 to 6400.0 seconds		
	Hysteresis	Adjustable for exiting alarm condition		
Max. Temperature/Pressure Rating				
Storage Temperature	-10 °C to 75 °C	14 °F to 167 °F		
Operating Temperature	0 °C to 65 °C	32 °F to 149 °F		
Relative Humidity	0 to 90%, non-condensing			
Flow Sensor/ Retaining Nut	PP	12.5 bar @ 20 °C	181 psi @ 68 °F	
		1.7 bar @ 85 °C	25 psi @ 185 °F	
	PVDF	14 bar @ 20 °C	203 psi @ 68 °F	
		1.7 bar @ 85 °C	25 psi @ 185 °F	
Operating Temperature				
	PP	-18 °C to 85 °C	0 °F to 185 °F	
	PVDF	-18 °C to 85 °C	0 °F to 185 °F	
Environmental				
Enclosure	NEMA 4X/IP65			
Shipping Weight				
	0.640 kg	1.41 lb		
Standards and Approvals				
CE, FCC, UL, NSF (3-2537-XC-PX version only)				
RoHS compliant, China RoHS				
Manufactured under ISO 9001 for Quality and ISO 14001 for Environmental Management and OHSAS 18001 for Occupational Health and Safety.

In-Line Installation

System Overview	Panel Mount Signet Instruments 8900 9900 9900-1BC 9950 	4 to 20 mA Dry Contact, Solid State Customer Supplied Metering Pump 	4 to 20 Output Customer Supplied Chart Recorder, Programmable Logic Controller, or Programmable Automation Controller 	Automation System 0486 Profibus Concentrator and Customer Supplied Programmable Logic Controller or Programmable Automation Controller 
	Signet 2537 Paddlewheel Flowmeter 			
	Signet Fittings 	All sold separately		

Application Tips

- Select PVDF Rotor Pin for use in Deionized Water.
- Use a sleeved rotor in abrasive liquids to reduce wear.
- Sensor plug is used to plug installation fitting after extraction of sensor from pipe.
- For liquids containing ferrous particles, use Signet Magmeters.
- For systems with components of more than one material, the maximum temperature/pressure specification must always be referenced to the component with the lowest rating.

Please refer to Wiring, Installation, and Accessories sections for more information.

Signet 2540 Stainless Steel High Performance Paddlewheel Flow Sensor

Standard Sensor

Hot-Tap Sensor

The Signet 2540 Paddlewheel Flow Sensor offers the strength and corrosion resistance of stainless steel for liquid applications with low velocity measurements. Unique internal circuitry eliminates the need for magnets in the process fluid, enabling flow measurement of 0.1 to 6 m/s (0.3 to 20 ft/s) while maintaining the advantages of insertion sensor design. Ultraflon 500C bearings and Tungsten Carbide pin provide exceptional wear resistance.

The Signet 2540 offers field replaceable electronics and transient voltage suppression (TVS) to provide greater immunity to large voltage disturbances (i.e. lightning) sometimes encountered in field wiring. Sensors can be installed in DN40 to DN600 (1½ to 24 in.) pipes using the 1½ in. or ISO 7/1-R 1.5 threaded process connection.

The sensors are also offered in a hot-tap configuration with a bleed valve service without process shutdown in pipes up to DN900 (36 in.). Both styles of sensors must be used in full pipes and can be used in low pressure systems.

Features

- Operating range 0.1 to 6 m/s (0.3 to 20 ft/s)
- Field replaceable electronics
- Non-magnetic RF detection
- Standard NPT or ISO process connections
- Hot-tap versions for installation/service without system shutdown
- For pipe sizes up to DN900 (36 in.)
- Adjustable sensor - one size for entire pipe range
- 7.6 m (25 ft) cable

Applications

- HVAC
- Turf Irrigation
- Cooling Systems
- Filtration Systems
- Water Distribution
- Leak Detection
- Pump Protection
- Clarified Effluent Totalization
- Ground Water Remediation
- Gravity Feed Line

Specifications

General			
Operating Range	0.1 to 6 m/s	0.3 to 20 ft/s	
Pipe Size Range	Standard Version	DN40 to DN600	1½ to 24 in.
	Hot-Tap Version	DN40 to DN900	1½ to 36 in.
Sensor Fitting Options	1½ in. NPT threads	ISO 7/1-R 1.5 threads	
Linearity	±1% of full range		
Repeatability	±0.5% of full range		
Min. Reynolds Number Required	4500		
Wetted Materials			
Body	316 stainless steel (1.4401)		
Fitting	316 stainless steel (1.4401)		
Fitting O-rings	FKM, optional EPDM (EPDM)		
Rotor	17-4PH-1 Stainless Steel		
Rotor Pin	Tungsten Carbide GRP 1 (standard) stainless steel (optional)		
Retainers (2)	316 stainless steel (1.4401)		
Rotor Bearings (2)	Carbon fiber reinforced PTFE		
Electrical			
Frequency	49 Hz per m/s nominal	15 Hz per ft/s nominal	
Power	5 to 24 VDC ±10%, regulated, 1.5 mA max.		
Output Type	Open collector, sinking, max 10.0 mA		
Cable Length	7.6 m (25 ft), can be extended up to 300 m (1,000 ft)		
Cable Type	2-conductor twisted-pair with shield, 22 AWG		
Max. Temperature/Pressure Rating			
Sensor with standard FKM sensor fitting O-rings	17 bar @ 82 °C	250 psi @ 180 °F	
Sensor with optional EPDM (EPDM) sensor fitting O-rings	17 bar @ 100 °C	250 psi @ 212 °F	
Operating Temperature	-18 °C to 100 °C	0 °F to 212 °F	
Shipping Weight			
	3-2540-1/-2/-1S/-2S	1.79 kg	3.9 lb
	3-2540-3/-4/-3S/-4S	2.15 kg	4.7 lb
Standards and Approvals			
	CE, FCC		
	RoHS compliant, China RoHS		
	Manufactured under ISO 9001 for Quality and ISO 14001 for Environmental Management and OHSAS 18001 for Occupational Health and Safety

System Overview

Panel Mount	Pipe, Tank, Wall Mount	Automation System
Signet Instruments 8900 9900 9900-1BC 9950	Signet Instruments 9900-1P 9900-1BC with Rear Enclosure 9950	0486 Profibus Concentrator and Customer Supplied Programmable Logic Controller or Programmable Automation Controller
		
Signet 2540 Standard or Hot-tap (not shown) Flow Sensor 		
All sold separately		
Fittings - Customer supplied		

Application Tips

- For systems with components of more than one material, the maximum temperature/pressure specification must always be referenced to the component with the lowest rating.
- Use the Conduit Adapter Kit to protect the cable-to-sensor connection when used in outdoor environments.
- Sensor electronics can be easily replaced by 3-2541.260-1 or 3-2541.260-2.

Temperature/Pressure Graphs

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification. When using a PVDF sensor in a PVC piping system, the fitting will reduce the system specification.

Please refer to Wiring, Installation, and Accessories sections for more information.

Ordering Information

Signet 3519 Flow Wet-Tap Valve

Assembly shown with extended length flow sensor installed.

The Signet 3519 Flow Wet-Tap Valve serves as a unique interface between the installation fitting and the wet-tap style Signet 515 or 2536 Rotor-X flow sensor. It provides a fast method of removing the sensor from the pipe under specified operating pressures. The PVC and stainless steel design of the Wet-Tap makes it resistant to corrosion and chemical attack by acids, alkalis, salt, and a number of other harsh chemicals.

The Signet 3519 Wet-Tap Valve mounts directly onto standard Signet installation fittings. The 3519 Wet-Tap consists of a flange and support plate that threads onto the pipe fitting insert, and a PVC ball valve through which an extended length sensor is inserted into the pipe.

Features

- Allows sensor removal without process shutdown
- Pressure release valve for safe sensor removal
- Dual safety lanyards
- Rugged corrosion-resistant PVC construction and stainless steel hardware
- Compatible with Signet 515 or 2536 Rotor-X Wet-Tap Flow Sensors
- Eliminates process downtime

Applications

- Filtration Systems
- Chemical Production
- Pump Protection
- Scrubbers
- Water Distribution
- Effluent Totalization
- Process Cooling Loops

for 5 to 8 in. pipes		
3519/515-P4*	159 000 820	Valve with Model 515 sensor
3519/2536-P4**	159 000 823	Valve with Model 2536 sensor
for 10 to 36 in. pipes		
3519/515-P5*	159 000 821	Valve with Model 515 sensor
3519/2536-P5**	159 000 824	Valve with Model 2536 sensor

Ordering Notes

- 1) *See model 515 data sheet for sensor specifications.
- 2) **See model 2536 data sheet for sensor specifications.
- 3) Models 515 and 2536 Wet-Tap sensors can be ordered separately.

Signet 2551 Magmeter Flow Sensor

Available in a variety of wetted materials and ideal for pipe sizes up to DN900 (36 in.)

The Signet 2551 Magmeter is an insertion style magnetic flow sensor that features no moving parts. The patented* sensor design is available in corrosion-resistant materials to provide long-term reliability with minimal maintenance costs. Material options include PP with stainless steel, PVDF with Hastelloy-C, or PVDF with Titanium. Utilizing the comprehensive line of Signet installation fittings, sensor alignment and insertion depth is automatic. These versatile, simple-to-install sensors deliver accurate flow measurement over a wide dynamic range in pipe sizes ranging from DN15 to DN900 (½ to 36 in.), satisfying the requirements of many diverse applications.

Signet 2551 Magmeters offer many output options of frequency/digital (S³L) or 4 to 20 mA which are available on both the blind and display versions. The frequency or digital (S³L) sensor output can be used with Signet's extensive line of flow instruments while the 4 to 20 mA output can be used for a direct input to PLCs, chart recorders, etc. Both the 4 to 20 mA output and digital (S³L) sensor interface is available for long distance signal transmission. An additional benefit is the empty pipe detection which features a zero flow output when the sensors are not completely wetted. Also, the frequency output is bi-directional while the 4 to 20 mA output can be set for uni- or bi-directional flow using the display or the 3-0252 Configuration Tool which connects to PCs for programming capabilities.

In addition, the display version of the 2551 Magmeter is available with relays and features permanent and resettable totalizer values, which can be stored and seen on the display. The display also contains multi-languages in English, Spanish, German, French, Italian and Portuguese menu options.

Features

- Test certificate included for -X0, -X1
- Patented Magmeter technology*
- No moving parts
- Bi-directional flow
- Empty pipe detection
- Installs into pipe sizes DN15 to DN900 (0.5 to 36 in.)
- Operating range 0.05 to 10 m/s (0.15 to 33 ft/s)
- Accurate measurement even in dirty liquids
- Polypropylene and PVDF retaining nuts standard, Valox optional
- 4 to 20 mA, digital (S³L), frequency, relay output (Display only)
- No pressure drop
- Corrosion resistant materials; PP or PVDF with SS, Hastelloy-C, or Titanium
- Multi-language display menu available

Certified to NSF/ANSI 61 & 372

(3-2551-PX-XX version only)

Applications

- Chemical Processing
- Water and Wastewater Monitoring
- Metal Recovery and Landfill Leachate
- Commercial Pools, Spas, and Aquariums
- HVAC
- Irrigation
- Scrubber Control
- Neutralization Systems
- Industrial Water Distribution

* U.S. Patent No: 7,055,396 B1

Specifications

General		
Operating Range	0.05 to 10 m/s	0.15 to 33 ft/s
Pipe Size Range	DN15 to DN900	½ to 36 in.
Linearity	± 1% reading plus 0.1% of full scale	
Repeatability	±0.5% of reading @ 25 °C (77 °F)	
Minimum Conductivity	20 µS/cm	
Wetted Materials		
Sensor Body/Electrodes and Grounding Ring	-P0, -P1, -P2: PP/316L SS	
	-T0, -T1, -T2: PVDF/Titanium	
	-V0, -V1, -V2: PVDF/Hastelloy-C	
O-rings	FKM (standard), EPR (EPDM), FFKM (optional)	
Case	PBT	
Display Window	Polyamide (transparent nylon)	
Protection Rating	NEMA 4X/IP65	
Electrical		
Power Requirements	4 to 20 mA	24 VDC ±10%, regulated, 22.1 mA max.
	Frequency	5 to 24 VDC ±10%, regulated, 15 mA max.
	Digital (S ³ L)	5 to 6.5 VDC, 15 mA max.
Auxiliary (only required for units with relays)	9 to 24 VDC, 0.4 A max.	
Reverse Polarity and Short Circuit Protected		
Current Output 4 to 20 mA	Loop Accuracy	32 µA max. error (25 °C @ 24 VDC)
	Isolation	Low voltage < 48 VAC/DC from electrodes and auxiliary power
	Maximum Cable	300 m (1000 ft)
	Error condition	22.1 mA
	Max. Loop Resistance	300 Ω
	Compatible with PLC, PC or similar equipment	
	4 to 20 mA load needed	
Frequency Output	Output Modes	Freq., or Mirror Relay (display version only)
	Max. Pull-up Voltage	30 VDC
	Max. Current Sink	50 mA, current limited
	Maximum Cable	300 m (1000 ft)
Compatible with Signet Model 8900, 9900, 9900-1BC, 9950		
Digital (S ³ L) Output	Serial ASCII, TTL level 9600 bps	
	Compatible with Model Signet 8900, 9900, 9950 and 0486	
Relay Specifications		
#1, #2 Type	Mechanical SPDT	
Rating	5 A @ 30 VDC max., 5 A @ 250 VDC max.	
#3 Type	Solid State	
Rating	50 mA @ 30 VDC, 50 mA @ 42 VAC	
Hysteresis	User adjustable for exiting alarm condition	
Alarm On Trigger Delay	Adjustable (0 to 9999.9 sec.)	
Relay Modes	Off, Low, High, Window, and Proportional Pulse	
Relay Source	Flow Rate, Resettable Totalizer	
Error Condition	Selectable; Fail Open or Closed	
Display		
Characters	2 x 16	
Contrast	User-set in four levels	
Backlighting (only on relay versions)	Requires external 9-24 VDC, 0.4 mA max.	
Max. Temperature/Pressure Rating		
Storage Temperature	-20 °C to 70 °C	-4 °F to 158 °F
Relative Humidity	0 to 95% (non-condensing)	
Operating Temperature	Ambient	-10 °C to 70 °C
	Media	0 °C to 85 °C
Maximum Operating Pressure	10.3 bar @ 25 °C	150 psi @ 77 °F
	1.4 bar @ 85 °C	20 psi @ 185 °F
Shipping Weight		
	0.680 kg	1.50 lb
Standards and Approvals		
	CE, FCC, UL, CUL, NSF (3-2551-PX-XX version only)	
	RoHS compliant, China RoHS	
	NEMA 4X / IP65 Enclosure (with cap installed)	
	Manufactured under ISO 9001 for Quality and ISO 14001 for Environmental Management and OHSAS 18001 for Occupational Health and Safety	

See Temperature and Pressure graphs for more information.

All sold separately

Temperature/Pressure Graphs

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification. When using a PVDF sensor in a PVC piping system, the fitting will reduce the system specification.

Application Tips

- Note minimum process liquid conductivity requirement is 20 µs/cm
- Install sensor using standard Signet installation fittings for best results.
- Sensor is capable of retrofitting into existing 515 and 2536 fittings.

Please refer to Wiring, Installation, and Accessories sections for more information.

Signet 2552 Metal Magmeter Flow Sensors

The Signet 2552 Metal Magmeter from Georg Fischer features all-stainless steel construction. The PVDF nosepiece and FKM O-rings are the only other wetted materials. The 2552 installs quickly into standard 1¼ in. or 1½ in. pipe outlets, and is adjustable to fit pipes from DN50 to DN2550 (2 to 102 in.). Two sensor lengths allow maximum flexibility to accommodate a variety of hardware configurations, including ball valves for hot-tap installations.

When equipped with the frequency output, the 2552 is compatible with any externally powered Signet flow instrument, while the digital (S³L) output enables multi-channel compatibility with Signet 8900, 9900 or 9950 Multi-Parameter instruments. Select the blind 4 to 20 mA current output to interface directly with data loggers, PLCs or telemetry systems. Key features include Empty Pipe Detection, LED-assisted troubleshooting, and bi-directional span capability (in 4 to 20 mA models).

The Signet 3-0252 Configuration Tool is available to customize every performance feature in the 2552 so it can be adapted to the user's application requirements.

Features

- NIST test certificate included
- Award winning hot-tap magnetic flow sensor up to DN2550 (102 in.)
- Patented Magmeter technology*
- Operating range 0.05 to 10 m/s (0.15 to 33 ft/s)
- Reliable operation in harsh environments
- Repeatable: ±0.5% of reading @ 25 °C
- Three output options: 4 to 20 mA, Frequency/Digital (S³L)
- ISO or NPT Threads

Applications

- Municipal Water Distribution
- Process and Coolant Flow
- Chemical Processing
- Wastewater
- Mining Applications
- Water Process Flow
- HVAC

* U.S. Patent No: 7,055,396 B1

Specifications

General			
Operating Range	Minimum		0.05 m/s 0.15 ft/s
	Maximum	pipes to DN1200 (48 in.)	10 m/s 33 ft/s
		pipes over DN1200 (48 in.)	3 m/s 10 ft/s
Pipe Size Range	DN50 to DN2550		2 to 102 in.
Linearity	± 1% reading plus 0.1% of full scale		
Repeatability	±0.5% of reading @ 25 °C		
Accuracy	±2% of measured value*		
*In reference conditions where the fluid is water at ambient temperature, the sensor is inserted at the correct depth and there is a fully developed flow profile which is in compliance with ISO 7145-1982 (BS 1042 section 2.2)			
Minimum Conductivity	20 µs/cm		
Wetted Materials			
Body and Electrodes	316L stainless steel		
Insulator	PVDF		
O-rings	FKM		
Cable	4-cond + shield, PVC jacket (Fixed cable models) or Water-resistant rubber cable assembly with Turck® NEMA 6P connector		
Power Requirements			
4 to 20 mA	24 VDC ±10%, regulated, 22.1 mA maximum		
Frequency	5 to 24 VDC ±10%, regulated, 15 mA maximum		
Digital (S ³ L)	5 to 6.5 VDC 15 mA maximum		
Reverse Polarity and Short Circuit Protected			
Cable Options			
Fixed cable	7.6 m	25 ft	
Detachable water tight sensor cable with Turck® connector (sold separately) two lengths: 4 m (13 ft) or 6 m (19.5 ft)			
Electrical			
Current Output (4 to 20 mA)	Programmable and Reversible		
	Loop Accuracy	32 µA max. error (@ 25 °C @ 24 VDC)	
	Temperature Drift	±1 µA per °C max.	
	Power Supply Rejection	±1 µA per V	
	Isolation	Low voltage < 48 VAC/DC from electrodes and auxiliary power	
	Maximum Cable	300 m	1000 ft
	Max. Loop Resistance	300 Ω	
	Error Condition	22.1 mA	
Frequency Output	Compatible with	Signet 8900, 9900, 9900-1BC and 9950	
	Max. Pull-up Voltage	30 VDC	
	Short Circuit Protected	≤30 V @ 0 Ω pull-up for one hour	
	Reverse Polarity Protected	to -40 V for 1 hour	
	Overvoltage Protected to +40 V for 1 hour		
	Max. Current Sink	50 mA, current limited	
	Maximum Cable	300 m	1,000 ft
Digital (S ³ L) Output	Compatible with	Signet 8900, 9900, 9950 and 0486	
	Serial ASCII, TTL level 9600 bps		
	Maximum Cable	Application dependent (See 8900 or 9900 manual) in non-icing conditions	
Operating Temp.	Ambient (non-icing conditions)	-15 °C to 70 °C	5 °F to 158 °F
	Media	-15 °C to 85 °C	5 °F to 185 °F
Max. Operating Pressure	20.7 bar @ 25 °C	300 psi @ 77 °F	
Hot-Tap Installation Requirements			
Maximum Installation Pressure	20.7 bar		300 psi
Maximum Installation Temp (Insertion/Removal)	40 °C		104 °F
Do not use hot-tap installation where temperatures will exceed 40 °C or if hazardous liquids are present.			
Shipping Weights			
3-2552-2X-A-11/A-12	2.50 kg	5.51 lb	
3-2552-2X-B-11/B-12	2.30 kg	5.07 lb

All sold separately				

Sensor Selection Guide

The 2552 Magmeter can be installed into a variety of pipe sizes. Follow the steps below to ensure that you choose the right sensor for your application.

Step 1: Determine how the sensor will be installed

A. For standard (non Hot-Tap) installations:

The height of the weldolet (threadolet) and pipe adapter(s) should be determined before the sensor is purchased.

- For retrofit installations, the stack height, or “A” dimension (see Fig. 1), is the overall height from the top of the pipe to the highest point of the stack.
- Sensor tip must be positioned at 10% of pipe ID
- For new installations, Signet recommends a weldolet (threadolet) and an adapter to accommodate the 1 ¼ in. (or 1 ½ in. for 2552-3) sensor process threads. The stack height, or “A” dimension (see Fig. 1), is the overall height from the top of the pipe to the highest point of the stack before the sensor is connected

B. For Hot-Tap installations:

The stack height of the ball valve, nipple weldolet (threadolet) and pipe adapters should be determined before the sensor is purchased.

- For retrofit installations, the ball valve must be at least a 1 ¼ in. (or 1 ½ in. for 2552-3) valve. The stack height, or “A” dimension (see Fig. 2), is the overall height from the top of the pipe to the top of the ball valve.
- Sensor tip base must be positioned at 10% of pipe ID
- For new installations, Signet recommends a 1 ¼ in. or 1 ½ in. full port ball valve, a short nipple and a weldolet (threadolet). The stack height or “A” dimension (see Fig. 2) is the overall height from the top of the pipe to the top of the ball valve before the sensor is connected.

Fig. 1
Standard installation with “A” dimension using a weldolet (threadolet)

Fig. 2
Hot-Tap installation with “A” dimension using a ball valve, short nipple and weldolet (threadolet)

Signet 2100 Turbine Flow Sensor

Engineered specifically for small pipe diameter applications, the Signet 2100 Turbine Flow Sensor provides accurate readings in two flow ranges: 0.3 to 3.8 lpm and 3 to 38 lpm (0.1 to 1 gpm and 0.8 to 10 gpm).

The injection-molded PVDF body and ceramic bearings provide excellent chemical compatibility and long service in dosing and batching applications. Union piping and tubing connections along with removable NEMA 4X electronics allow for easy assembly and field replaceability. The 2100 can be used with DN8 (¼ in.), DN10 (3/8 in.), DN15 (½ in.) tubing, or DN15 (½ in.) piping for simple installation. End connections are available in PVDF for hose barbs, fusion socket or IR/butt fusion, and in PVC for socket or NPT thread.

Features

- Operating range of 0.38 to 38 lpm (0.10 to 10 U.S. gpm)
- Non-magnetic turbine
- Union ends for various connector types
- End connector kits for rigid or flexible tubing or DN15 (½ in.) pipe
- PVDF & ceramic wetted parts provide superior chemical compatibility
- For use with both clear and opaque fluids
- Small and compact design
- 4.6 m (15 ft) cable
- Features removable electronics that installs from either side of the sensor

Applications

- Chemical Addition
- Textile Dyeing
- High-purity Chemical Dispensing
- Water Addition
- Fertigation
- Dosing
- Pump Protection
- Not suitable for gases

Specifications

General		
Flow Range	-L = 0.38 to 3.8 lpm	0.10 to 1 U.S. gpm
	-H = 3 to 38 lpm	0.8 to 10 U.S. gpm

System Overview

Panel Mount	Pipe, Tank, Wall Mount	Automation System
Signet Instruments 8900 9900 9900-1BC 9950 	Signet Instruments 9900-1P 9900-1BC with Rear Enclosure 9950 	0486 Profibus Concentrator and Customer Supplied Programmable Logic Controller or Programmable Automation Controller 
Signet 2100 Flow Sensor 		
End Connector options Fusion, threaded or solvent socket connectors for DN15 (1/2 in.) pipe 		Hose barb connectors for DN8, DN10, or DN15 (1/4 in., 3/8 in. or 1/2 in.) flexible tubing 
All sold separately		

Application Tips

- All socket and hose barb connector kits are sold individually. Two kits are required for each sensor.
- Junction block, 3-8050-1 recommended if standard cable is extended to maximum 300 m (1000 ft)

Temperature/Pressure Graphs

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification. When using a PVDF sensor in a PVC piping system, the fitting will reduce the system specification.

Please refer to Wiring, Installation, and Accessories sections for more information.

Signet 2000 Micro Flow Rotor Sensor

The Signet 2000 Micro Flow Rotor Sensor is constructed of Polyphenylene Sulfide (PPS) which provides high material strength. The 2000 offers two flow ranges starting at 0.11 or 1.13 lpm (0.03 or 0.3 gpm), for clean process liquids, regardless of fluid color or opacity.

This sensor can be connected to flexible tubing or rigid pipe, and uses standard hardware for mounting. Only one moving part and a low pressure drop across the sensor reduces operating costs and maintenance requirements.

Features

- **Operating range 0.11 to 12.11 lpm (0.03 to 3.2 U.S. gpm)**
- **Simple mounting**
- **¼ in. NPT or ISO threads for simple pipe or tubing connection**
- **Measures opaque and transparent liquids**
- **Low pressure drop**
- **Standard cable 7.6 m (25 ft)**

Applications

- **Coolant Flow**
- **Dosing**
- **Batch Dispensing**
- **Not recommended for Strong Oxidizers**

Specifications

General			
Operating Range	-11 & -12 version	0.11 to 2.6 lpm	0.03 to 0.7 U.S. gpm
	-21 & -22 version	1.13 to 12.11 lpm	0.3 to 3.2 U.S. gpm
Linearity	±1.2% of full range		
Repeatability	±0.5% of full range		
Connections	¼ in. NPT (male) or ISO 7/1 - R1/4 (male)		
Wetted Materials			
Sensor Body and Cover	40% glass filled Polyphenylene Sulfide (PPS)		
Rotor	PEEK®, natural, unfilled		
Cover O-ring	FKM		
Electrical			
Power	5 to 24 VDC ±10%, regulated, 10 mA max.		
Output Type	Open-collector, sinking, 20 mA max.

Signet 2507 Mini Flow Rotor Sensor

The Signet 2507 Mini Flow Rotor Sensor contains a free-running rotor that is driven by the fluid flow. Within the given measurement range, the rotational speed of the rotor is proportional to the fluid flow rate.

Magnets built into the rotor trigger an electronic switch in the top of the sensor creating a square-wave output. Both opaque and transparent fluids can be measured with kinematic viscosities between 0.2 to 20.0 centistokes.

Features

- Operating range 400 to 12,000 ml/m (0.1 to 3.2 U.S. gpm)
- Detachable signal connector for easy servicing
- Simple installation with a G 1/4 in. (1/4 in. NPT) threaded connection
- Standard 7.6 m (25 ft) cable
- PVDF construction
- Compact assembly

Applications

- Fluid Dispensing
- Laboratory and Clinical Wet Benches
- Chemical Dosing
- Batch Processes

Specifications

General			
Operating Range	-2V sensor	400 to 2800 mL/m	0.105 to 0.740 U.S. gpm
	-3V sensor	700 to 4200 mL/m	0.185 to 1.123 U.S. gpm
	-4V sensor	1300 to 6000 mL/m	0.343 to 1.585 U.S. gpm
	-6V sensor	3200 to 12000 mL/m	0.845 to 3.170 U.S. gpm
Accuracy	±2% of reading		
Repeatability	±0.25% of full range

PORTAFLOW 220/330 Portable Ultrasonic Flowmeter

The Portaflow range brings simplicity to the non-invasive measurement of liquid flow. Portaflow offers the user quick and accurate flow measurement with its easy to follow menu and simple set up. Results can be achieved within minutes of opening the case. Compact, rugged and reliable, the Portaflow range has been designed to provide sustained performance in industrial environments.

Features

- Large, easy to read graphic display with backlighting
- Easy to install thanks to flexible guide rails
- Rechargeable battery for up to 20 hours mobile operation
- Simple to follow dual function keypad
- Simple 'Quick Start' set up procedure
- Data logger for 198k data points (Type PF330)
- Analog and pulse outputs

Applications

- Potable Water
- River Water
- Cooling Water
- Demineralized Water

Specifications

General			
DSP Measurement Technique		Transit time	
Flow Velocity Range		0.1 m/s - 20 m/s	
Accuracy	Pipe ID >75 mm	±0.5% to ±2% of flow reading for flow rate >0.2 m/s	
	Pipe ID 13 mm - 75 mm	±3% of flow reading for flow rate >0.2 m/s	
	All pipe ID's	±6% of flow reading for flow rate <0.2 m/s	
Repeatability		±0.5% of measured value or ±0.02 m/s whichever is the greater	
Response Time		< 500 ms depending on pipe diameter	
Selectable Flow Units	Velocity	m/sec, ft/sec.	
	Volume	"l/s, l/min, l/h, gal/min, gal/h, USgals/min, USgals/h, Barrel/h, Barrel/day, m ³ /s, m ³ /min, m ³ /h"	
Selectable Total Volume Units		liter, gallon, US gallons, Barrel, m ³	
Total Volume		12 digits	
Menu Languages		EN, DE, FR, RU, SWE, IT, SP, P, NO, DEN	
Environmental			
Operating Temperature		-20 °C to 50 °C	-4 °F to 122 °F
Storage Temperature		-25 °C to 65 °C	-13 °F to 149 °F
Pipe Wall Temperature		-20 °C to 135 °C	-4 °F to 275 °F
Operating Humidity		Max. 90% relative humidity @ 50°C (122 °F)	
Applicable Pipe Types			
Pipe Materials		PVDF-SYGEF, PP-PROGEF, PE-ELGEF, PB-INSTAFLEX, ABS, PVC-U/PVC-C, Mild Steel, Ductile Iron, Stainless Steel 316, Copper	
Pipe Dimension (OD)	Type PF220	13 mm to 1000 mm	0.5 in. to 39 in.
	Type PF330	13 mm to 2000 mm	0.5 in. to 78 in.
Pipe Wall Thickness		1 mm to 75 mm	0.04 in. to 3 in.
Pipe Lining		Applicable pipe linings include Rubber, Glass, Concrete, Epoxy, Steel	
Pipe Lining Thickness		0 mm to 10 mm	0 in. to 0.4 in.
Electrical			
Supply Voltage		9 to 24 V DC	
Power Consumption		Max. 10.5 W	
Battery			
	Technology	5-cell NiMH	
	Capacity	3.8 Ah	
	Operating Time (typical)	Typically 20 hours continuous with backlight and 4-20mA output OFF	
	Recharge Time	6.5 h	
	Service Life	>500 charge/discharge cycles	
Power supply			
Input Voltage		90 to 264 V AC (47 to 63 Hz)	
Output Voltage		12 V DC	
Output Current Max.		1.5 A	
Approvals		UL, CUL, TUV, CB, CE	
Outputs			
Analog Output	Range	4 to 20 mA, 0 to 20 mA, 0 to 16 mA	
	Resolution	0.1% of full scale	
	Load Max.	620 Ω	
	Isolation	1500 V Opto-isolated	
	Alarm Current	Adjustable between 0 to 26mA	
Pulse Output	Type	Digital MOSFET relay	
	Pulse Repetition	Max. 500 pps, user programmable	
	Pulse Width	5 - 500 ms, user programmable	
	Voltage Max.	48 V	
	Current Max.	500 mA	
USB Interface (PF330 only)	Isolation	1500 V opto isolated	
	Protocol	Supports full speed (12Mbps/sec) data connection	
	Software	USB driver software is provided with the package	
RS-232 Interface (PF330 only)	Connector	Proprietary industrial connector	
	Protocol	Serial RS-232 communication including handshaking	
	Connector	Proprietary industrial connector (GND, RxD, TxD, DTR, DSR)

Dimensions

System Overview

220 Portable Ultrasonic Flowmeter

- 1 - Portaflow 220 instrument
- 2 - Ruled separation bar
- 3 - Transducers 'A-ST' x2 for use with pipes ranging 13mm – 114mm, or 'B-ST' x2
- 4 - Guide rail
- 5 - Chains x2 - 0.5 m long (1.65 ft) for A-ST, or 3.3 m long (10.8 ft) for B-ST type transducers
- 6 - Transducer cables (x2) 2 meters long
- 7 - Test block
- 8 - Acoustic couplant
- 9 - Output cable
- 10 - Power supply
- 11 - Manual (not shown)

The Portaflow 220 equipment is supplied in a Polypropylene carrying case fitted with a foam insert to give added protection for transportation.

System Overview

330 Portable Ultrasonic Flowmeter

- 1 - Portaflow 330 instrument with backlit graphic display
- 2 - Ruled separation bar
- 3- Transducers 'A-ST' x2 for use with pipes ranging 13mm – 114mm
- 4 - Transducers 'B-ST' x2 for use with pipes ranging 115mm – 2000mm
- 5 - Guide Rail
- 6 - Chains x2 3.3 m long (10.8 ft)
- 7 - Transducer cables (x2) 2 meters long
- 8 - Test block
- 9 - Acoustic couplant
- 10 - Output cable
- 11 - RS-232 cable
- 12 - USB cable
- 13 - Power supply
- 14 - Manual (not shown)

The Portaflow 330 equipment is supplied in a rugged IP67 carrying case fitted with a foam insert to give added protection for transportation.

ULTRAFLOW U1000 Ultrasonic Flowsensor

The U1000 is an ultrasonic permanent/fixed clamp-on flow metering solution for measuring flow rate. The cost effective device can either be used as a stand alone meter or as an integral part of a control loop.

The U1000 is very simple to install - clamp it on to the pipe, connect it to power and enter the pipe diameter. No special skills or tools are required.

The clamp-on design allows the installation in running systems without opening the pipe, providing minimum downtime and maximum availability.

Compact, rugged and reliable, the U1000 has been designed to provide sustained performance in industrial environments.

Dimensions

Features

- Large, easy to read graphic display with backlighting
- Easy to install without special tools
- Clamp-on sensors for dry servicing
- Simple to follow programming menu
- Simple 'Quick Start' set up procedure
- Compact integral design

Applications

- Ultrapure water measurement
- Flow measurement for heat metering
- Chilled water metering and flow measurement
- Flow measurement for chilled water energy metering
- Process water metering and flow measurement

ULTRAFLOW U3000 / U4000 Ultrasonic Flowsensor

The Ultraflow brings simplicity to the non-invasive measurement of liquid flow, offering the user quick and accurate flow measurement with its easy to follow menu and simple set up. Dry servicing, providing minimum downtime and maximum availability, even in a continuously running system. Compact, rugged and reliable, the Ultraflo has been designed to provide sustained performance in industrial environments.

Features

- Large, easy to read graphic display
- Easy to install
- Clamp-on sensors for dry servicing
- Simple to follow programming menu
- Simple 'Quick Start' set up procedure
- Data logger for 198 k data points (Type U4000)
- Analog, pulse and alarm outputs
- Reynolds number correction

Applications

- HVAC & Energy System Audits
- Pump Verification
- Process Control
- Chemical Addition
- Hydraulic Systems
- Fire Systems
- Leak Detection
- Boiler Testing

Signet 8150 Battery Powered Flow Totalizer

Member of the ProcessPro® Family of Instruments

Panel Mount

Pipe, Wall, and Tank Mount

Integral Mount

The Signet 8150 Battery Powered Flow Totalizer is compatible with the Signet 515 and 525 flow sensors, and will provide years of dependable operation. The large digital display indicates flow rate and totalized flow volume simultaneously. One of the three totalizers is resettable from the front panel or a remote location, while the second resettable totalizer can only be reset by entering a user-selectable security code. The third is a permanent non-resettable totalizer.

Our intuitive software design and four-button keypad provide for simple operation while setting screen displays and programming the system. Calibration can be easily performed by entering the AutoCal feature and entering a value to match an external reference. Screen displays can be modified to suit the user's needs; along with the flow rate, any of the three totalizers can be selected as the displayed totalizer. Users can quickly scroll through the totalizers simply by pressing any key on the keypad. A display averaging feature is included for applications where the flow in the pipe fluctuates. For applications where flow stops and starts due to production needs, a no-flow indicator will display the hours of non-flow.

Features

- Three totalizers: 2 resettable and 1 permanent, user-selectable
- Long-lasting lithium batteries
- Mounting versatility
- No-flow indicator
- Large digital display with averaging
- Simple push-button operation
- User-selectable access code prevents unwanted changes
- Auto-calibration

Applications

- Wastewater Flow Accumulation
- Water Treatment Systems
- Remote or Mobile Treatment/Distribution Systems
- Irrigation Systems
- Filtration Systems
- Commercial Pools & Spas
- Groundwater Remediation
- R.O. Concentrate
- Process Flow Monitoring
- UPW Distribution
- Demineralizer Regeneration
- Process Cooling Water

Specifications

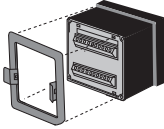

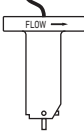

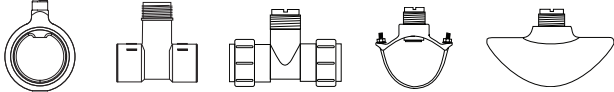

General		
Compatibility	Signet 515 and 525 flow sensors	
Input Freq. Range	0 to 400Hz	
Accuracy	±0.5% of reading	
Display	LCD type	
	4-digit upper line - flow rate	
	8-digit lower line - volume totalizer count, either resettable or permanent	
Averaging	0 to 120 secs.	
Contrast	Automatic	
Low Battery Indication	Battery symbol appears on LCD display	
8-digit Resettable Totalizers	Stored until user resets; continues to be stored even after batteries are removed	
8-digit Permanent	Kept permanently, even when batteries are removed	
Materials		
Enclosure	PBT resin	
Keypad	Sealed 4-key silicon rubber	
Panel and Case Gasket	Neoprene	
Window	Polyurethane coated polycarbonate	
Electrical		
Battery	Two 3.6 V Lithium thionyl chloride, AA-size	
Battery Life	4 years nominal @ 50 °C (122 °F)	
Environmental		
Operating Temperature	-10 °C to 65 °C	14 °F to 149 °F
	-40 °C to 100 °C	-40 °F to 212 °F
Relative Humidity	0 to 95%, non-condensing	
Enclosure	NEMA 4X/IP65 (front face only on panel mount); field mount is 100% NEMA 4X/IP65	
Shipping Weight		
	0.5 kg	1.1 lb
Standards and Approvals		
	CE, FCC, UL, CUL	
	RoHS compliant, China RoHS	
	Manufactured under ISO 9001 for Quality and ISO 14001 for Environmental Management and OHSAS 18001 for Occupational Health and Safety

System Overview

	Panel Mount	Pipe, Tank, Wall Mount
Signet 8150 Flow Totalizer includes mounting bracket and panel gasket	 	Signet 8150 Flow Totalizer with 3-8050 Universal Mount Kit
Signet Sensors 515 525		
Signet Fittings		
	All sold separately	

Ordering Notes

- 1) For panel version, cutout must be 92 x 92 mm (3.62 x 3.62 in.)
- 2) To mount the panel version on a wall, use the heavy duty wall mount bracket.
- 3) Use the Universal mounting kit with the field mount instrument to mount to a pipe, tank or wall.
- 4) An optional splashproof rear cover can be ordered separately if needed.

Please refer to Wiring, Installation, and Accessories sections for more information.

Ordering Information

Mfr. Part No.	Code	Mounting notes
Battery Operated Flow Totalizer		
Field Mount (yellow body)		
3-8150-1	159 000 929	Field mount for pipe, tank, and wall mounting
Panel Mount (black body)		
3-8150-1P	159 000 930	Panel mount; includes mounting bracket and panel gasket
Integral Mount		
for ½ to 4 in. pipes		
3-8150-P0*	159 000 931	mounted on Model 515 Paddlewheel (Part No. 3-8510-P0), w/ polypropylene body, black polypropylene retaining nut, black PVDF rotor, and Titanium pin
3-8150-T0*	159 001 011	mounted on Model 515 Paddlewheel (Part No. 3-8510-T0), with a natural PVDF body, natural PVDF retaining nut, rotor, and pin
for 5 to 8 in. pipes		
3-8150-P1*	159 000 932	mounted on Model 515 Paddlewheel (Part No. 3-8510-P1), w/ polypropylene body, black polypropylene retaining nut, black PVDF rotor, and Titanium pin

* See individual sensor sheets for more sensor information.

Accessories and Replacement Parts

Mfr. Part No.	Code	Description
Mounting		
3-8050	159 000 184	Universal mounting kit
3-8050.390-1	159 001 702	Retaining nut replacement kit, NPT, Valox
3-8050.390-3	159 310 116	Retaining nut replacement kit, NPT, PP
3-8050.390-4	159 310 117	Retaining nut replacement kit, NPT, PVDF
3-0000.596	159 000 641	Heavy duty wall mount bracket (panel mount only)
3-5000.399	198 840 224	Panel adapter, 5 x 5 in. to ¼ DIN
3-5000.598	198 840 225	Surface mount bracket (panel mount only)
3-8050.395	159 000 186	Splashproof rear cover (panel mount only)
3-9900.396	159 001 701	Angle adjustment adapter kit
Liquid Tight Connectors		
3-9000.392	159 000 368	Liquid tight connector kit (includes 3 connectors)
3-9000.392-1	159 000 839	Liquid tight connector, NPT (1 connector)
3-9000.392-2	159 000 841	Liquid tight connector, PG 13.5 (1 connector)
Other		
7400-0011	159 000 935	Lithium battery, 3.6 V, size AA (2 required)
5523-0222	159 000 392	Cable (per foot), 2 cond. w/shield, 22 AWG
Replacement Parts for Integral Mount Units - see Model 515 catalog pages for information		
3-8051	159 000 187	Flow integral mounting kit, NPT, Valox
3-8051-1	159 001 755	Flow integral mounting kit, NPT, PP
3-8051-2	159 001 756	Flow integral mounting kit, NPT, PVDF
3-8510-P0	198 864 504	Sensor for ½ to 4 in. pipes, Polypropylene body
3-8510-PI	198 864 505	Sensor for 5 to 8 in. pipes, Polypropylene body
3-8510-T0	159 000 622	Sensor for ½ to 4 in. pipes, all natural PVDF
3-8510-V0	198 864 506	Sensor for ½ to 4 in. pipes, PVDF body

Flow Integral Systems with 9900 Transmitter

Member of the SmartPro® Family of Instruments

Signet has combined the 9900 SmartPro® Transmitter with the 515/8510 and 2536/8512 Paddlewheel Flow sensors to create integral systems that are easy to order and simple to install. Integral systems are also available in conductivity, level, temperature, and pressure configurations.

Each integral system features a 9900 Transmitter which provides a local and easy to read LCD display. The push button keypad makes it easy to navigate through the transmitter's menu. The DC-powered 9900 features a scalable 4 to 20 mA output and open collector for process control.

Flow Integral Systems with 9900 Transmitters are combined with Signet's field-proven Models 515/8510 and 2536/8512. These sensors reliably perform in flow ranges from 0.3 to 6 m/s (1 to 20 ft/s) and 0.1 to 6 m/s (0.3 to 20 ft/s) respectively for pipe sizes from ½ to 8 inches. They are available in a variety of materials including polypropylene and PVDF and are easily mounted in the pipe using Signet's comprehensive line of standard fittings.

Features

- Local display for sensor mounted instruments
- Provides 4 to 20 mA output
- "At a glance" visibility
- "Dial-type" digital bar graph
- NEMA 4X/IP65

Applications

- RO/DI System Control
- Cooling Tower Control
- Water Quality Monitoring
- Filtration Systems
- Chemical Production
- Liquid Delivery Systems
- Pump Protection
- Scrubber Systems
- Semiconductor Water Production

Refer to Models 515/8510, 2536/8512 and 9900 technical specifications for more details on these products.

Specifications

See individual product pages for more information.

Dimensions

Ordering Notes

Integral Mounts are available with all parts conveniently assembled (transmitter, sensor, and mounting kit). Alternatively, all three parts can be purchased separately. See individual transmitter and sensor pages for more information.

Only available in Europe.

Signet 2724-2726 pH/ORP Electrodes

General Purpose

Compatible with ALL Signet pH/ORP instruments and SmartPro transmitters

Flat

Protected Bulb

The Signet 2724-2726 pH and ORP electrodes are general purpose sensors ideal for a wide range of applications. These feature a patented reference design and uses the unique foul-proof patented DryLoc® connector. The large area PE reference junction and pathway is constructed to increase the total reference effectiveness and ensures long service life.

The DryLoc® connector with corrosion resistant gold plated contacts readily connects the sensor to the mating 2751 pH/ORP Smart Sensor Electronics or the 2760 Preamplifier. The robust Ryton® threaded sensor body and choice of flat pH, bulb pH, or flat ORP sensing elements allows a broad range of chemical and mechanical compatibility for a wide variety of applications.

There are two optional pH sensing versions available, HF and LC. The HF version is for applications where traces of hydrofluoric acid (2% or less) will attack standard pH glass. The LC version can be used for low conductivity fluids 20 - 100 $\mu\text{S}/\text{cm}$ nominal and below 20 μS when mounted under controlled conditions.

The quick temperature response is available in either a Pt1000 or 3 K Ω temperature sensor and allows compatibility with all Signet pH/ORP instruments. The 2724-2726 electrodes incorporate $\frac{3}{4}$ inch NPT or ISO 7/1-R 3/4 threads for installing into standard pipe-tees. They can also be mounted directly into Signet standard fittings, DN15 to DN100 ($\frac{1}{2}$ to 4 inch).

Features

- Patented reference design for exceptional performance and prolonged life in harsh environments*
- Memory chip enabled for access to a wide range of unique features when connected to the Signet 2751 pH/ORP Smart Sensor Electronics
- Ryton® (PPS) body for broad range of chemical compatibility
- Patented DryLoc® connector with gold plated contacts
- Special design allows for installation at any angle, even inverted or horizontal
- $\frac{3}{4}$ " NPT or ISO 7/1-R 3/4 threaded sensors for use with reducing tees DN15 to DN100 ($\frac{1}{2}$ to 4 in.)
- Mounts in Signet standard fittings from DN15 to DN100 ($\frac{1}{2}$ to 4 in.)
- Quick temperature response
- Bulb and flat HF resistant glass available for trace HF, in less than 2% concentration applications
- Low conductivity sensor available for liquids down to 20 $\mu\text{S}/\text{cm}$

Applications

- Water & Wastewater Treatment
- Neutralization Systems
- Effluent Monitoring
- Sanitization Systems
- Pool & Spa Control
- Aquatic Animal Life Support Systems
- Process Control
- Cooling Towers

Specifications

General			
Performance	Efficiency	>97% @ 25 °C (77 ° F)	
Operating Range	pH	0 to 14 pH	
	ORP	±2000 mV	
	3-2726-LC	Low conductivity fluids; 20 - 100 µS/cm nominal < 20 µS; flow must be less than 150 ml/min in a properly grounded system	
	3-2724-HF, 3-2726-HF	Hydrofluoric acid resistant glass, pH 6 or below; trace HF ≤2%	
Compatibility			
	2751 Smart Sensor Electronics (for 8900, 9900, 9950, 4 to 20 mA or Profibus Concentrator), 2760 Preamplifier		
Temperature Sensor			
	Pt1000 versions	Compatible with Signet 2751 pH/ORP Smart Sensor Electronics for connection to a PLC or to the Signet 8900, 9900 or 9950 instruments	
	3 KΩ Balco versions	Compatible with Signet 2751 pH/ORP Smart Sensor Electronics or with Signet 2760 pH/ORP Preamplifier for connection to the Signet 8750 pH/ORP Transmitter	
Process Connection			
	¾ in. NPT	ISO 7/1-R 3/4	Mounts into Signet fittings
Wetted Materials			
	pH	Ryton® (PPS), glass, UHMW PE, FKM	
	ORP	Ryton® (PPS), glass, UHMW PE, FKM, Platinum	
Max. Temperature/Pressure Rating			
Operating Temperature Range*		-10 °C to 85 °C	14 °F to 185 °F
Operating Pressure Range		6.8 bar @ -10 to 65 °C (100 psi @ 14 to 150 °F)	
		4 bar @ 65 to 85 °C (58 psi @ 150 to 185 °F)	
*Best performance for 2724-HF, 2726-HF sensors is above 10 °C (50 °F)			
Recommended Storage Temperature			
	0 °C to 50 °C		32 °F to 122 °F
The electrode glass will shatter if shipped or stored at temperature below 0 °C (32 °F)			
The performance life of the electrode will shorten if stored at temperatures above 50 °C (122 °F)			
Mounting			
In-line Mounting	Use the sensor threads		
	Use a Signet standard fitting up to 4 in.		
	Sensor can be mounted at any angle		
Submersible Mounting	Use threads on models 2751 or 2760		
	Requires ¾ inch NPT or ISO 7/1-R 3/4 male threaded liquid tight extension conduit.		
Shipping Weight			
	0.25 kg	0.55 lb	
Standards and Approvals			
	RoHS compliant, China RoHS		
	Manufactured under ISO 9001 for Quality, ISO 14001 for Environmental Management and OHSAS 18001 for Occupational Health and Safety

All sold separately

Electrode Key Features and Benefits:

1. Ryton® body for chemical compatibility with most harsh chemicals.
2. Porous UHMW PE (ultra high molecular weight polyethylene) junction resists fouling and build-up.
3. Memory chip enabled for convenient data storage and access (calibration data, operational data, and manufacturing data), electrode health monitoring via glass impedance measurement when used in connection with the 2751 pH/ORP Smart Sensor Electronics.
4. Internal temperature sensor located in the glass stem for a quick temperature response.
5. DryLoc® connector with corrosion resistant gold plated pins for quick and easy sensor removal. Resists moisture and dirt intrusion.
6. Dual-patented reference design with a 406 mm (16 in.) reference pathway for prolonged life in harsh environments. This enables the sensor to last significantly longer than other standard pH/ORP electrodes in most applications.
- 6a. With the patented reference design, the Signet 2726-LC version performs better in low conductivity water between 20 - 100 μS and lasts longer than previous "DI" electrodes.
- 6b. The 2726-LC sensor also performs in applications with extremely low (less than 20 μS) conductivity. Special precautions must be taken to avoid measurement complications. Please note the following.
 - Electrostatic charges (streaming potentials) can cause dramatic offsets in a system with very low conductivity water. To minimize this, sensors should be placed in a well grounded system.
 - To enhance performance, a low flow cell is recommended to provide a steady flow rate (150 ml/minute). Sensors placed in high flow applications will experience noisier readings due to streaming potential.
7. Threads for NPT or ISO process connection into reducing tees
 - Use off-the-shelf GF reducing tees DN20 to DN100 ($\frac{3}{4}$ to 4 in.).
8. Mounts directly into Signet fittings ($\frac{1}{2}$ to 4 in.) for easy sensor retrofitting.
9. Mount submersible into a tank via the 2751 or 2760 back threads.

Dual-patented reference design for long life in conductivity or chemicals.

⑦ Sensor in threaded reducing tee

⑧ Sensor in Signet fitting

⑨ Sensor submersible installation

Temperature/Pressure Graph

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification.

Application Tips

- Use the flat glass electrodes when a self-cleaning feature is desired; especially useful in applications with abrasive chemicals for in-line installations.
- Use bulb protected electrodes for low temperature applications or where fast response is required.
- ORP electrodes are generally used for chemical reaction monitoring, not control.
- Ensure that sensor materials are chemically compatible with the process liquid.
- Keep electrode tip wet, avoid air pockets and sediment.

Model 2724-2726 Ordering Notes

- 1) pH and ORP electrodes require connection to model 2751 pH/ORP Smart Sensor Electronics or 2760 Preamplifier.
- 2) The 2751 “EasyCal” feature recognizes common pH and ORP buffer values of 4, 7 and 10 pH and +87, +264 and +469 mV for ORP.

Buffer Solutions

- 3822-7004
- 3822-7007
- 3822-7010

Quinhydrone

3822-7115

The Signet pH buffers are ideal for calibration. The liquid solutions are conveniently packaged in one pint (473 ml) bottles. pH buffer kits in powder pillows are available for mixing fresh solutions with water at the time of use.

All pH buffers are color coded for easy identification; 4.01 pH is red, 7.00 pH is yellow, and 10.00 pH is blue. All pH buffers are traceable to NIST standards. The 4.01 and 7.00 pH buffer solutions can be used to calibrate ORP sensors when saturated with quinhydrone.

Signet 2734-2736 pH/ORP Electrodes

High Performance

Compatible with Signet 8900/9900/9950 Instruments

Flat

Protected Bulb

The Signet 2734-2736 pH and ORP electrodes are ideal for a wide range of harsh applications with low concentrations of poisoning ions, and chemicals that react with silver ion, Ag⁺. The superior glass formulation provides excellent chemical resistance in acidic and alkaline/caustic environments. The large area PTFE reference junction, salt bridge and reference electrode are constructed to increase the total reference effectiveness, resist chemical attack, help resist coating, and ensure long service life in harsh applications.

The DryLoc[®] connector with corrosion resistant gold plated contacts readily connects the sensor to the mating 2751 pH/ORP Smart Sensor Electronics. The robust Ryton[®] threaded sensor body and choice of flat, bulb pH, or flat ORP sensing elements provide a broad range of chemical compatibility for a wide variety of applications.

There is an optional pH sensing version available for applications with HF. The HF version is for applications where traces of hydrofluoric acid (2% or less) will attack standard pH glass.

The quick temperature response is available in a Pt1000 temperature sensor and allows compatibility with the Signet 8900, 9900 and 9950 instruments.

The sensors incorporate 3/4 inch NPT or ISO 7/1-R 3/4 threads for installing into standard pipe-tees. They can also be mounted directly into Signet standard fittings, DN15 to DN100 (1/2 to 4 inch).

Features

- Enhanced reference chemistry to resist chemical poisoning and prolong the life of the electrodes in harsh environments
- PTFE reference junction resists fouling and chemical attack
- Superior pH glass formulation for excellent chemical resistance in acidic and alkaline/caustic environments
- Ryton[®] (PPS) body for broad range of chemical compatibility
- Memory chip enabled for access to a range of unique features when connected to the Signet 2751 pH/ORP Smart Sensor Electronics
- Patented reference design for exceptional performance*
- Patented DryLoc[®] connector with gold plated contacts
- Mounts in Signet standard fittings from DN15 to DN100 (1/2 to 4 in.) or standard pipe fitting, 3/4" NPT or ISO 7/1-R 3/4
- Special design allows for installation at any angle, even inverted or horizontal
- Quick temperature response
- Bulb and flat HF resistant glass available for trace HF, in less than 2% concentration applications

Applications

- Water & Wastewater Treatment
- Neutralization Systems
- Plating Baths
- Air Scrubbers
- Metal Removal
- Process Control
- Cooling Towers

*U.S. Patent Nos.: 6,666,701, 7,799,193 B2, 7,867,371 B2 and 8,211,282 B2

Models 2734-2736 may be mounted at any angle without affecting the performance

*Avoid locations with air pockets and sediment

When mounting in standard threaded fittings the electrode must be mounted horizontally to 60 degrees below horizontal position only.

System Overview

Panel Mount	Pipe, Tank, Wall Mount	4 to 20 mA Output	Automation System
Signet Instruments 8900 9900 or 9950 with 2751 Smart Sensor Electronics 	Signet Instruments 9900 with 2751 Smart Sensor Electronics and Rear Enclosure 	2751 Smart Sensor Electronics and Customer Supplied Chart Recorder or Programmable Logic Controller or Programmable Automation Controller 	2751 Smart Sensor Electronics with 0486 Profibus Concentrator and Customer Supplied Programmable Logic Controller or Programmable Automation Controller
Signet 2734-2736 DryLoc® pH/ORP Electrodes 			
In-Line Installation - Signet and threaded fittings only 		Submersible Installation - Customer supplied pipe extension or conduit with 3/4 in. NPT or ISO 7/1-R 3/4 threads 	

All sold separately

Electrode Key Features and Benefits:

1. Ryton® body for chemical compatibility with most harsh chemicals.
2. Porous PTFE junction resists fouling, chemicals, and build-up.
3. Enhanced reference chemistry to resist poisoning and to prolong the life of the electrodes in harsh media applications.
4. Internal temperature sensor located in the glass stem for a quick temperature response.
5. Memory chip enabled for convenient data storage and access (calibration data, operational data, and manufacturing data), electrode health monitoring via glass impedance measurement when used in connection with the 2751 pH/ORP Smart Sensor Electronics.
6. DryLoc® connector with corrosion resistant gold plated pins for quick and easy sensor removal. Resists moisture and dirt intrusion.
7. Threads for NPT or ISO process connection into reducing tees. Use off-the-shelf GF reducing tees DN20 to DN100 (¾ to 4 in.).
8. Mounts directly into Signet fittings (½ in. to 4 in.) for easy sensor retrofitting.
9. Mount submersed into a tank via the 2751 pH/ORP Smart Sensor Electronics.

Dual-patented reference design for long life.

For pipes and fittings DN50 (2 inch) or larger, mount 60 degrees below horizontal position only.

Signet 2764-2767 Differential DryLoc® pH/ORP Electrodes

High Performance

Flat
Glass

Protected
Bulb

The Signet 2764-2767 Differential pH & ORP electrodes are high performance sensors built with the DryLoc® connector, a Ryton® body, and PTFE reference junction to handle the most extreme and harshest of chemical applications.

These differential electrodes use a field-proven 3-electrode differential technique: the pH and reference electrodes are measured against a ground electrode, ensuring a steady and stable signal. A key feature is the reference electrode, which is housed in a glass half-cell embedded in the reference chamber and is protected from compounds that may contain sulfides (S²⁻) and metals. To ensure long service life, the reference features a refillable electrolyte chamber and a replaceable equitransferant salt bridge, both easily serviced in the field. The patented porous PTFE reference junction resists fouling, clogging and chemical attack.

Other elements of the design are the solution ground, the pH/ORP electrodes, and the temperature element. The solution ground eliminates noisy measurements by draining electrical current away from the reference electrode. The pH/ORP electrodes are designed with a flat or bulb surface, and a temperature device positioned at the tip of the measurement surface for a quick temperature response. Various temperature devices offered include 3 KΩ, or Pt1000 RTD.

The electrodes are used with the Signet 2751 Smart Sensor Electronics, which provide a blind 4 to 20 mA output or use the digital (S³L) output to connect the Signet 8900, 9900 or 9950 instruments, and the Profibus Concentrator. The electrodes can also be used with the 2760 Preamplifier to connect to ProPoint® and ProcessPro® series of pH/ORP instrumentation.

Features

- Differential design for stable measurements in the most aggressive applications
- Long service life even in severe or difficult chemical applications
- Memory chip enabled for access to a wide range of unique features when connected to the Signet 2751 pH/ORP Smart Sensor Electronics
- Ryton (PPS) body for broad range of chemical compatibility
- Watertight DryLoc® connector with foul-proof gold plated contacts*
- Porous PTFE reference junction resists fouling and chemical attack
- Rebuildable reference electrode
- Solution ground
- Temperature sensor (pH)
- Easy sensor replacement using DryLoc electrode connector
- Quick temperature response
- Compatible with all Signet instruments

Applications

- Water and Wastewater Treatment
- Coagulation and Flocculation
- Plant Effluent
- Plating Baths
- Scrubbers
- Textile Dye Process
- Harsh Chemical Applications
- Heavy Metal Removal and Recovery
- Toxics Destruction
- Surface Finishing

See Technical Reference section for assistance in choosing the correct sensor.

Electrode Key Features and Benefits

1. Glass encased reference electrode protects the Ag/AgCl (silver/silver chloride) element from reacting with certain chemical compounds that typically leach into the reference chambers. Keeps the pH/ORP reading stable.
2. Large volume reference electrolyte chamber resists dilution over time for a long service life. Chamber is refillable. Holds approximately 30 ml of electrolyte.
3. Salt Bridge serves as a double reference junction and is the first line of defense to keep out process chemicals from the reference electrolyte chamber. It is built with a double porous PTFE reference junction which is highly compatible to chemicals, resists fouling and build-up of dirt.
4. Memory chip enabled for convenient data storage and access (calibration data, operational data, and manufacturing data), electrode health monitoring via glass impedance measurement when used in connection with the 2751 pH/ORP Smart Sensor Electronics.
5. Ryton® body for chemical compatibility to most harsh chemicals. Also able to withstand high temperatures.
6. DryLoc connector with corrosion resistant gold plated pins for quick and easy sensor removal.
7. Capillary TC (temperature sensor) embedded in tip of pH/ORP electrode for quick temperature response.
8. Measuring pH/ORP electrode.
9. Solution Ground electrode eliminates noisy measurements by draining electrical current away from the reference electrode.

Electrode Cut-Away View

A Differential Electrode solves many common problems typically experienced by standard pH/ORP electrodes at troublesome measuring points. See the table below to find the common problem, cause and effect, and the Differential pH/ORP Electrode solution.

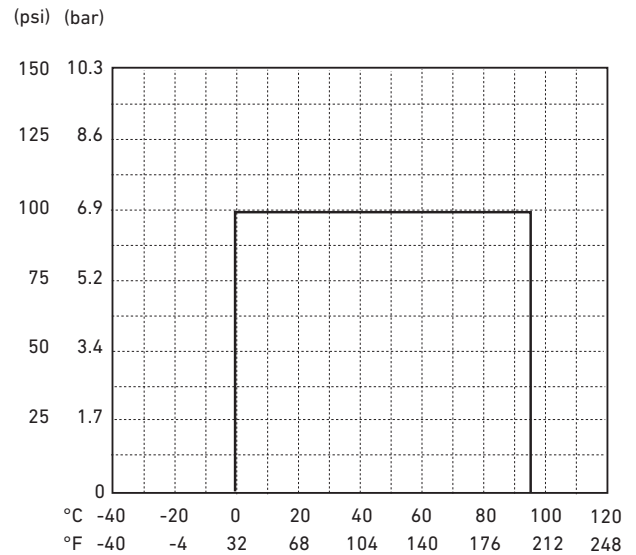

If the (Signet Models 272X, 273X or 277X) pH/ORP electrode experiences the following:	The cause and effect of the problem may be:	Use a Differential Electrode to solve the problem because:
<ul style="list-style-type: none"> • Reading slowly drifts over time • Sensor responds slowly 	<ul style="list-style-type: none"> • Chemical attack from Hg^{2+}, Cu^{+}, Pb^{2+}, ClO_4^{-} or other compounds which react with or dilute the KCl reference electrolyte. 	<ul style="list-style-type: none"> • Salt bridge will slow or stop attack. If attacking ions penetrate the salt bridge and affect the reference, simply refill reference solution.
	<ul style="list-style-type: none"> • Reference junction gets clogged from oils, grease, or dirt from the process. 	<ul style="list-style-type: none"> • Readings do not drift due to stable differential reference design, however may require cleaning or replacement of the salt bridge if electrode gets too dirty.
<ul style="list-style-type: none"> • Reading slowly drifts over time • Sensor reading becomes erratic 	<ul style="list-style-type: none"> • Chemical attack of the Ag^{+} reference from Br^{-}, I^{-}, CN^{-}, and S_2^{-} compounds. 	<ul style="list-style-type: none"> • Will not affect electrode due to Ag^{+} element protected in glass encased reference electrode.
	<ul style="list-style-type: none"> • Clogged reference and slowed reading from silver compounds forming on the inside of the reference electrode from Ag^{+} of reference element reacting and precipitating Ag_2S, $AgBr$, AgI, $AgCN$, or other silver compounds. 	<ul style="list-style-type: none"> • Will not affect electrode due to Ag^{+} element protected in glass encased reference electrode.
<ul style="list-style-type: none"> • Reading suddenly jumps to a new value • Reading unexpectedly changes 	<ul style="list-style-type: none"> • Stray electrical currents in the process liquid; Ag^{+} reference element picks up current and shifts reference reading, resulting in shifted pH reading. The Ag^{+} element will eventually become totally stripped. Process must be properly grounded or place metal rod close to electrode. 	<ul style="list-style-type: none"> • Will not affect electrode due to Ag^{+} element protected in glass encased reference electrode; also, electrode has a built in solution ground, so if there is a stray current, it will not be seen by the electrode.

Temperature/Pressure Graph

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification.

Ion	Ion name	Ion	Ion name	Compound	Compound name
Br ⁻	Bromide	Hg ²⁺	Mercury	KCl	Potassium chloride
Cu ⁺	Copper iron	ClO ₄ ⁻	Perchlorate	Ag ₂ S	Silver sulfide
CN ⁻	Cyanide	Ag ⁺	Silver	AgBr	Silver bromide
I ⁻	Iodide	S ²⁻	Sulfide	AgI	Silver iodide
Pb ⁺⁺	Lead			AgCN	Silver cyanide

Model 2764-2767

Ordering Notes

- 1) pH and ORP electrodes require connection to model 2751 or 2760.
- 2) Conduit and mounting brackets for submersible installations must always be used (customer supplied).
- 3) Adapters from 1 - 1½ in. are available.
- 4) Use sensor threads for in-line mounting; Model 2751 or 2760 threads for submersible mounting.
- 5) Reference electrode can be rebuilt with replacement electrolyte and salt bridge.

Application Tips

- Use the flat glass electrodes when a self-cleaning feature is desired; especially useful in applications with abrasive chemicals for in-line installations.
- Use bulb protected electrodes for low temperature applications where a fast response is required.
- ORP electrodes are generally used for chemical reaction monitoring, not control.
- Ensure sensor materials are chemically compatible with the process liquid.
- Keep electrode tip wet, avoid air pockets and sediment.

Buffer Solutions

3822-7004
3822-7007
3822-7010

Quinhydrone

3822-7115

The Signet pH buffers are ideal for calibration. The liquid solutions are conveniently packaged in one pint (473 ml) bottles. pH buffer kits in powder pillows are available for mixing fresh solutions with water at the time of use.

All pH buffers are color coded for easy identification; 4.01 pH is red, 7.00 pH is yellow, and 10.00 pH is blue. All pH buffers are traceable to NIST standards. The 4.01 and 7.00 pH buffer solutions can be used to calibrate ORP sensors when saturated with quinhydrone.

Please refer to Wiring, Installation, and Accessories sections for more information.

Signet 2774-2777 DryLoc® pH/ORP Electrodes

General Purpose/High Performance

Flat
Glass

Protected
Bulb

The Signet 2774-2777 pH and ORP electrodes are high performance sensors ideal for a wide range of applications. The unique foul-proof DryLoc® connector with gold-plated contacts is designed specifically for use with the Signet 2751 pH/ORP Smart Sensor Electronics or the 2760 Preamplifier. These dependable and highly responsive electrodes feature a PTFE double reference junction with potassium nitrate (KNO_3) in the front chamber to block various poisoning ions such as Copper (Cu^{2+}), Lead (Pb^{2+}), Mercury (Hg^{2+}), and a large reference chamber that combine to extend the service-life.

The positioning of the temperature element embedded in the pH sensing tip allows the temperature response to be quick and accurate. The electrodes are offered with either flat or bulb style sensing elements. The flat versions allow sediment and particles to sweep past the measurement surface, minimizing risks of abrasion, breakage and coating. The bulb versions can be used for low temperature applications or where fast response is required. Due to the specially designed chambers which keep electrolyte in place, all sensor models can be installed at any angle, even inverted.

The quick temperature response is available in either a Pt1000 or 3K Ω temperature sensor and allows compatibility with all Signet pH/ORP instruments.

Features

- Double reference PTFE junction to block various poisoning ions and resist fouling and dirt buildup
- Ryton (PPS) body for broad range of chemical compatibility
- Memory chip enabled for access to a wide range of unique features when connected to the Signet 2751 pH/ORP Smart Sensor Electronics
- Patented DryLoc® connector with gold plated contacts*
- Special design allows for installation at any angle, even inverted or horizontal
- Temperature sensor (pH)
- Quick temperature response
- Easy sensor replacement using DryLoc electrode connector
- High temperature versions available
- Mounts into standard $\frac{3}{4}$ inch threads
- Compatible with all Signet instruments

Applications

- Water Treatment & Water Quality Monitoring
- Cooling Towers and Boiler Protection
- Aquatic Animal Life Support Systems
- Pool and Spa Control
- Neutralization Systems
- Process Control

*U.S. Patent No.: 6,666,701

Specifications

General			
Compatibility	Signet Models 2751 and 2760		
Operating Range	2774/2776	0 to 14 pH	
	2775/2777	±2000 mV (ORP)	
Process Connection	¾ in., for use in reducing tees up to 4 in.		
Reference	Electrolyte	KNO ₃ /KCl polyacrylamide gel

See Technical Reference section for assistance in choosing the correct sensor.

Electrode Key Features and Benefits

1. Ryton® body for chemical compatibility to resist most harsh chemicals. Also able to withstand high temperatures.
2. Porous PTFE junction resists fouling, chemicals, and build-up.
3. First reference chamber with KNO_3 protects Ag/AgCl wire for a prolonged sensor life.
4. Capillary TC (temperature sensor) embedded in tip of pH/ORP electrode for quicker temperature response.
5. DryLoc connector with corrosion resistant gold plated pins for quick and easy sensor removal.
6. Memory chip enabled for convenient data storage and access (calibration data, operational data, and manufacturing data), electrode health monitoring via glass impedance measurement when used in connection with the 2751 pH/ORP Smart Sensor Electronics.
7. Threads for NPT process connection into reducing tees. Use off the shelf GF reducing tees DN20 to DN100 (3/4 to 4 in.).

Temperature/Pressure Graph

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification.

Application Tips

- Use the flat glass electrodes for in-line pH sensor applications when a self-cleaning feature is desired; especially useful in applications with abrasive chemicals in in-line applications.
- Use bulb protected electrodes for low temperature applications or where fast response is required.
- ORP electrodes are generally used for chemical reaction monitoring, not control.
- Ensure that sensor materials are chemically compatible with the process liquid.
- Keep electrode tip wet, avoid air pockets and sediment.

Model 2774-2777 Ordering Notes

- 1) pH and ORP sensors require connection to model 2751 or 2760.
- 2) Conduit and mounting brackets for submersible installation must always be used (customer supplied).
- 3) All of these sensors can be installed upside-down.
- 4) Special order options may have longer delivery time. Consult your local Georg Fischer sales representative for lead times.

Signet 3719 pH/ORP Wet-Tap Assembly

3719
Assembly

2756, 2757 Wet-Tap
Electrodes
(Sold Separately)

The Signet 3719 pH/ORP Wet-Tap allows installation and removal of pH or ORP electrodes, even under process pressure, without the need for process shutdown during routine electrode maintenance and calibration.

Process isolation is achieved during electrode retraction with two sets of double O-ring seals on a unique and compact retraction assembly; no separate valve is required.

The Wet -Tap body design allows full access to the plunger and internal O-rings, to easily perform maintenance such as lubrication/replacement of O-rings and the cleaning of the internal plunger/housing to remove material build up in difficult applications.

A patented cam-activated automatic locking mechanism, SafeLoc™, and the short stroke design help to assure operator safety. The wet-tap unit can be mounted at any angle and can be used with the Signet DryLoc® Wet-Tap electrodes.

Features

- Electrode removal without process shutdown
- Space saving 45 mm (1.75 in.) short-stroke design
- Sealed pneumatic dampening for smooth and safe operation
- SafeLoc™: Cam-activated automatic locking mechanism
- Protects electrode sensing surface from breakage
- Suitable for mounting in any orientation
- Process threaded connection NPT or ISO
- Fully serviceable internal O-rings

Applications

- Aquatic Animal Life Support Systems
- Recreational Water Monitoring
- Water & Wastewater Treatment
- Effluent Monitoring
- Neutralization Systems
- Sanitization Systems
- Pool and Spa Control

NOTE:

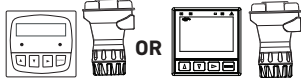

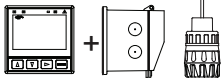

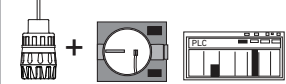

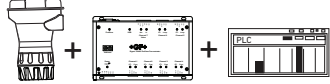

This product is assembled using Synthetic grease with PTFE.

Signet 2756-2757 pH/ORP Wet-Tap Electrodes

The Signet 2756-2757 Wet-Tap pH and ORP electrodes are general purpose sensors ideal for a wide range of applications where the installation and removal of the electrode can be performed without the need for system shutdown.

The Signet 3719 pH/ORP Wet-Tap Assembly allows installation and removal of pH or ORP electrodes, even under process pressure, without the need for process shutdown during routine electrode maintenance and calibration. Process isolation is achieved during electrode retraction with two sets of double O-ring seals on a unique and compact retraction assembly; no separate valve is required.

The DryLoc connector with corrosion resistant gold plated contacts readily connects the sensor to the mating 2751 pH/ORP Smart Sensor Electronics or the 2760 Preamplifier. The robust polyarylsulphone (PAS) body and choice of bulb pH or flat ORP sensing elements allow a broad range of chemical compatibility for a wide range of applications.

The quick temperature response is available in either a Pt1000 or 3 K Ω temperature sensor and allows compatibility with all Signet pH/ORP instruments.

The Wet-Tap assembly unit can be mounted at any angle and can be used with the Signet DryLoc[®] Wet-Tap pH and ORP electrodes.

Features

- PTFE reference junction resists fouling and chemical attack
- Polyarylsulphone (PAS) body for broad range of chemical compatibility
- General purpose bulb pH glass suitable in a wide range of applications
- Patented DryLoc connector with gold plated contacts
- Pt1000 or 3 K Ω Balco temperature element for quick temperature response
- Electrode removal without process shutdown when installed in the Signet 3719 pH/ORP Wet-Tap Assembly
- Memory chip enabled for access to a wide range of unique features when connected to the Signet 2751 pH/ORP Smart Sensor Electronics
- Special design allows for installation at any angle, even inverted or horizontal

Applications

- Aquatic Animal Life Support Systems
- Recreational Water Monitoring
- Water & Wastewater Treatment
- Effluent Monitoring
- Neutralization Systems
- Sanitization Systems
- Pool and Spa Control

Specifications

General		
Compatibility	Signet 3719 Wet-Tap Assembly, 2751 Smart Sensor Electronics or 2760 Preamplifier	
Operating Range	pH	0 to 14 pH

3-2757 Wet-Tap ORP

Temperature/Pressure Graph

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification.

Product Selection Guide

- Step 1 - Choose sensor
- Step 2 - Choose preamplifier or sensor electronics
- Step 3 - Choose Wet-Tap assembly
- Step 4 - Choose a customer supplied mounting option

Ordering Information

Mfr. Part No.	Code	Tip design	Temperature Element	Use With
DryLoc pH Electrodes				
3-2756-WTP	159 001 390	Bulb	Pt1000	2751 Smart Sensor Electronics*
3-2756-WTP-1	159 001 384	Bulb	3 KΩ Balco	2751 or 2760 Preamplifier**
DryLoc ORP Electrodes				
3-2757-WTP	159 001 391	Flat	N/A	2751 Smart Sensor Electronics* or 2760 Preamplifier**

*The 2751 Smart Sensor Electronics has a digital (S³L) output which is used with the 8900, 9900 or 9950 instruments, and the Profibus Concentrator. It also has a 4 to 20 mA output for connections to PLC's, data recorders, etc.

**The 2760 preamplifier is used for connection directly to older Signet analog transmitters.

Model 2756-2757

Ordering Notes

- 1) pH and ORP electrodes require connection to model 2751-1 or 2751-2 or 2760-X1

Accessories and Replacement Parts

Mfr. Part No.	Code	Description
3-2700.395	159 001 605	Calibration kit: includes 3 polypropylene cups, box used as cup stand, 1 pint pH 4.01, 1 pint pH 7.00
3822-7115	159 001 606	20 gm bottle quinhydrone for ORP calibration (must use pH 4.01 and/or pH 7.00 buffer solutions)
Other		
1220-0114	159 000 854	3719 O-ring, FKM (spare part)
3-0700.390	198 864 403	pH buffer kit (1 each 4, 7, 10 pH buffer in powder form, makes 50 ml of each)
3822-7004	159 001 581	pH 4 buffer solution, 1 pint (473 ml) bottle
3822-7007	159 001 582	pH 7 buffer solution, 1 pint (473 ml) bottle
3822-7010	159 001 583	pH 10 buffer solution, 1 pint (473 ml) bottle
3-2759	159 000 762	pH/ORP system tester kit for all pH instruments
3-2759.391	159 000 764	Adapter cable for use with 2751 and 2760
3800-5000	159 838 107	3.0M KCl storage solution for pH and ORP, 1 pint (473ml) bottle

Signet 2751 DryLoc® pH/ORP Smart Sensor Electronics

In-line
2751-1

In-line EasyCal
2751-2

Submersible
2751-3 or 2751-4

DryLoc® Electrodes sold separately

The Signet 2751 pH/ORP Smart Sensor Electronics featuring the DryLoc® connector, is the solution for field-free calibration, out of range glass impedance and broken glass detection, alerting the operator to probe failure or maintenance needs.

The 2751 features two different outputs: a two-wire 4 to 20 mA loop output with optional EasyCal function or a digital (S³L) output which allows for longer cable lengths and is compatible with all Signet 8900, 9900 and 9950* instruments or in blind, 4 to 20 mA.

The pH/ORP Smart Sensor Electronics will allow for calibration of electrodes in a laboratory setting and installation of pre-calibrated probes in the field, reducing system downtime. Memory chip enabled electrodes will store operational data such as minimum and maximum pH/mV readings, runtime, minimum and maximum temperature (pH only), for troubleshooting and operational evaluation. To take full advantage of all features and benefits of the 2751, use with Signet 9900 (Generation IV or later), 9950 Transmitter or 0486 Profibus Concentrator.

The 2751 self-configures for pH or ORP operation via automatic recognition of the electrode type. The optional EasyCal feature allows simple push-button calibration and includes an LED indicator for visual feedback.

The 2751 submersible pH/ORP Smart Sensor Electronics can also be used in-line when used with the 3/4" or 1" threaded sensors including the 272X, 273X, 275X, 276X and 277X series of electrodes. The 2751 in-line sensor electronics can be used with Signet fittings up to DN100 (4 in.) and Wet-Tap assemblies.

Features

- Probe health monitoring, glass impedance and broken glass detection
- Memory chip interface that allows for transferable calibration, runtime data, and manufacturing information
- In-line integral mount and submersible installation versions
- Automatic temperature compensation
- Auto configuration for pH or ORP operation
- Optional EasyCal calibration aid with automatic pH buffer recognition for 4, 7 and 10 pH and ORP solutions: quinhydrone saturated pH 4 or 7 buffers and Light's Solution +469 mV
- Junction boxes for convenient wiring
- Patented DryLoc® connector provides a quick and secure connection to the sensor**

Applications

- Water and Wastewater Treatment
- Neutralization Systems
- Scrubber Control
- Effluent Monitoring
- Surface Finishing
- Flocculent Coagulation
- Heavy Metal Removal and Recovery
- Toxics Destruction
- Sanitization Systems
- Pool & Spa Control
- Aquatic Animal Life Support Systems

*Users of 9950 Gen I and 9950 (Gen 2a) should update to 9950 (Gen 2b, available in Q4) to take full advantage of the 2751 features and benefits. Visit www.gfsignet.com for the latest software update.

**U.S. Patent No.: 6,666,701

Specifications

General			
Compatible Electrodes			
Signet DryLoc® pH and ORP Electrodes, Models 2724-2726, 2734-2736, 2756-2757 Wet-Tap, 2764-2767, 2774-2777			
Operating Range	pH	-1 to 15 pH	
	ORP	±2000 mV	
Response Time	pH	< 6 sec. for 95% of change	
	ORP	Application dependent	
Materials	In-line	PBT (thermal plastic polyester) and polypropylene (retaining nut)	
	Submersible	CPVC	
Electrical			
Cable	4.6 m	15 ft	3-conductor shielded (3-2751-1 in-line and the 3-2751-3 or -4 submersible sensor electronics only)
	22 AWG		
Power	12 to 24 VDC		±10%, regulated for 4 to 20 mA output
	5 to 6.5 VDC		±5% regulated recommended, 3 mA max., for digital (S ³ L) output
Current Output	pH	Fixed 4 to 20 mA, isolated, = 0 to 14 pH (custom scaling available with 0252 tool)	
	ORP	Fixed 4 to 20 mA, isolated, = -1000 to +2000 mV (custom scaling available from ± 2000 mV with 0252 tool)	
Max Loop Resistance	100 Ω max. @ 12 V	325 Ω max. @ 18 V	600 Ω max. @ 24 V
Accuracy	±32 µA		
Resolution	±5 µA		
Update Rate	0.5 seconds		
Error Indication	3.6 mA, 22 mA, or none		
Digital (S ³ L) Output	Serial ASCII, TTL level 9600 bps		
Accuracy	pH	± 0.02 pH @ 25 °C	± 0.02 pH @ 77 °F
	ORP	± 1.5 mV @ 25 °C	± 1.5 mV @ 77 °F
	Temperature	≤ 0.4 °C	0.72 °F
Resolution	pH	≤ 0.01 pH	
	ORP	1.5 mV	
Update Rate	0.5 seconds		
Available Data	Raw mV, pH or ORP, Temperature (pH), Glass Impedance (pH), Minimum mV (pH), Maximum mV (pH), Minimum Temperature (pH), Maximum Temperature (pH), Model Number, Serial Number, Manufacturing Date, Runtime, Slope pH/mV, Measurement Offset, and Temperature		
Error Indication	Open input diagnostic, broken glass detection (pH), High Impedance		
Input Impedance, Z	>10 ¹¹ Ω		
Environmental			
Enclosure	3-2751-1 & -2	NEMA 4X/IP65 with electrode connected	
	3-2751-3 & -4	NEMA 6P/IP68 with electrode and watertight conduit and/or extension pipe connected	
Max. Temperature/Pressure Rating			
Operating Temperature			
Submersible	0 °C to 85 °C	32 °F to 185 °F	
	0 °C to 85 °C	32 °F to 185 °F	
Storage Temperature	-20 °C to 85 °C	-4 °F to 185 °F	
Relative Humidity	0 to 95%, non-condensing (without electrode connected)		
Shipping Weight			
	2751-2	0.75 kg	1.65 lb
	2751-1, -3 & -4	0.64 kg	1.41 lb
Standards and Approvals

Model 2751 Ordering Information

- 1) Model 2751 requires 12 to 24 VDC to function as a blind 4 to 20 mA output transmitter.
- 2) Order a 3-2751-2 or any other 2751 with a junction box 3-8050-2 if the EasyCal feature is desired.
- 3) Conduit and mounting brackets for submersion installation must always be used (customer supplied).
- 4) The 3-2759 System Tester must be ordered with the adapter cable 3-2759.391 for exclusive use with the 2751.
- 5) All sensor electronics, preamplifiers and connectors require a DryLoc electrode for full system installation.
- 6) The 2751 pH/ORP Smart Sensor Electronics is compatible with all Signet 8900, 9900 and 9950 instruments. To take full advantage of the advanced features use the 9900 SmartPro Transmitters (Generation IV or greater), 9950 and 0486 Profibus Concentrator.

Application Tips

- The EasyCal feature automatically recognizes standard 4.0, 7.0, and 10.0 pH buffer or ORP quinhydrone solutions of +87 and +264 mV or Light's Solution, +469 mV, and simplifies calibration. For EasyCal ORP only single point calibration is used.
- Frequency of calibration of electrodes is dependent upon the application.

Ordering Information

Mfr. Part No.	Code	Description
In-line pH/ORP Smart Sensor Electronics (Yellow body)		
3-2751-1	159 001 804	with 4.6 m (15 ft) cable, recommended for 9900 or 9950 instruments
3-2751-2	159 001 805	with junction box and EasyCal, recommended for 4 to 20 mA use
Submersible pH/ORP Smart Sensor Electronics (Gray body)		
3-2751-3	159 001 806	with 4.6 m (15 ft) cable and 3/4 in. NPT threads - when 4 to 20 mA is required use the 3-8050-2 junction box with EasyCal
3-2751-4	159 001 807	with 4.6 m (15 ft) cable and ISO 7/1-R 3/4 threads - when 4 to 20 mA is required use the 3-8050-2 junction box with EasyCal

Sensor Electronics with preamplified signal and Digital (S³L) output (for use with the SmartPro Instruments) or 4 to 20 mA output - power supplied to unit dictates output type.

Note:

The 2751 pH/ORP Smart Sensor Electronics is compatible with 8900, 9900 and 9950 SmartPro Transmitters, and Signet 0486 Profibus Concentrator. To take full advantage of the 2751 features, use 9900 (Generation IV or later), 9950 or 0486 Profibus Concentrator.

Accessories and Replacement Parts

Signet 2760 DryLoc® pH/ORP Preamplifiers

(Not for new designs or installations)

In-line
2760

Submersible
2760

DryLoc® Electrodes sold separately.

The Signet 2760 pH/ORP Preamplifiers feature a DryLoc® connector, providing a robust connection to Signet DryLoc electrodes.

The 2760 preamplifier allows DryLoc pH/ORP electrodes to work with Signet ProcessPro® and ProPoint® pH/ORP instruments.

The DryLoc electrode connector system quickly forms a robust assembly for submersible and in-line installations. Optional NEMA 4X junction enclosures extend the preamplifier cable to long distances.

The 2760 submersible preamplifier can also be used as an in-line preamplifier when used with the ¾ in. or 1 in. threaded sensors including the 2724, 2774 and 2764 series electrodes. The 2760 in-line preamplifier can be used with Signet fittings up to DN100 (4 in.) and Wet-Tap assemblies.

The 2760 pH/ORP preamplifiers are compatible with the Signet 8750 and older analog transmitters. The 8900 and 9900 instruments and Profibus Concentrator require the use of the 2751 Smart Sensor Electronics, and are not compatible with the 2760 preamplifier.

Features

- In-line integral mount and submersible installation versions
- Compatible with pH or ORP sensors
- Patented DryLoc® connector provides a quick and secure connection to the sensor*

Applications

- Water/Wastewater Treatment
- Neutralization Systems
- Scrubber Control
- Effluent Monitoring
- Surface Finishing
- Flocculent Coagulation
- Heavy Metal Removal and Recovery
- Toxic Destruction
- Sanitization Systems
- Pool & Spa Control
- Aquatic Animal Life Support Systems

*U.S. Patent No.: 6,666,701

2. Determine the mounting style: In-line And -In-line fitting Or Submersible	 2760-11 or -21	 2760-11 or -21 2760-1 or -2	 2760-11 or -21 2760-1 or -2	 2760-11 or -21 2760-1 or -2	 2760-11 or -21  3719 Wet-Tap Assembly (Submersible not applicable with Wet-Tap assembly)
	 Signet fitting	 3/4" reducing tee	 1" reducing threaded tee	 3/4" reducing tee	
	2760-1 or -2 and cable conduit (customer supplied) connected to 3/4" sensor electronics				

Model 2760 Ordering Information

- 1) Conduit and mounting brackets for submersion installation must always be used (customer supplied).
- 2) The 3-2759 System Tester must be ordered with the adapter cable 3-2759.391 for exclusive use with the 2760.
- 3) All sensor preamplifiers require a DryLoc electrode for full system installation.
- 4) Use Models 2724-2726, 2756-WT, 2757-WT, 2764-2767 and 2774-2777 pH and ORP electrodes with the 2760.

Application Tips

- The EasyCal feature automatically recognizes standard 4.0, 7.0, and 10.0 pH buffer or ORP Quinhydrone solutions of 87 and 264 mV and simplifies calibration
- Frequency of calibration of electrodes is dependent upon the application.

Ordering Information

Mfr. Part No.	Code	Description
Submersible pH/ORP Preamplifier (gray body) for use with the 8750 instrument		
3-2760-1	159 000 939	¾ in. NPT threads and 4.6 m (15 ft) cable
3-2760-2	159 000 940	¾ in. ISO threads and 4.6 m (15 ft) cable
In-line pH/ORP Preamplifier (yellow body); use with Signet fittings or Wet-Tap sensors and other manufacturer's instruments		
3-2760-11	159 001 367	¾ in. NPT threads and 4.6 m (15 ft) cable
3-2760-21	159 001 368	¾ in. ISO threads and 4.6 m (15 ft) cable

Accessories and Replacement Parts

Mfr. Part No.	Code	Description
Calibration		
3-2700.395	159 001 605	Calibration kit: includes 3 polypropylene cups, box used as cup stand, 1 pint pH 4.01, 1 pint pH 7.00
3822-7115	159 001 606	20 gm bottle quinhydrone for ORP calibration (must use pH 4.01 and/or pH 7.00 buffer solutions)
3-2759	159 000 762	pH/ORP system tester (adapter cable sold separately)
3-2759.391	159 000 764	2759 adapter cable for use with 2751 and 2760 DryLoc® sensor electronics
3-0700.390	198 864 403	pH buffer kit (1 each 4, 7, 10 pH buffer in powder form, makes 50 ml of each)
3822-7004	159 001 581	pH 4 buffer solution, 1 pint (473 ml) bottle
3822-7007	159 001 582	pH 7 buffer solution, 1 pint (473 ml) bottle
3822-7010	159 001 583	pH 10 buffer solution, 1 pint (473 ml) bottle
Other		
5523-0624	159 000 636	Cable, 6-cond. plus shield, 24 AWG, black/red/white (for use with 2760, orders must specify length per foot)
3-8050	159 000 184	Universal mounting kit
3-8050.390-1	159 001 702	Retaining nut replacement kit, Valox K4530

Signet 2818-2823 Conductivity/Resistivity Electrodes

Signet 2818-2823 Conductivity/Resistivity Electrodes are designed to provide versatile installation and accurate sensing across a very broad dynamic range. These electrodes are built with a controlled surface finish to ensure accuracy and repeatability. The standard electrode is constructed 316 SS, but there are other materials available for maximum chemical compatibility.

Reversible threads or sanitary flanges allow for maximum installation versatility.

Sanitary flange versions are available in stainless steel and Titanium with surface quality finish of less than RA 25 and with an optional NIST Traceability Certificate to meet USP requirements.

Coupled with Signet patented measuring circuitry, a three decade measurement range is achieved without the need for troublesome electrode platinization. A platinum RTD (Pt1000) located within the electrode allows optimal temperature sensing.

Features

- **Standard process connections**
 - ¾ in. NPT Polypro
 - ¾ in. NPT SS on 10 and 20 cell
 - Tri-clamp 1 - 1½ in., 2 in.
 - Opt. ½ in. NPT 316 SS
- **316 SS or Titanium (indicated tri-clamp only) standard electrode**
- **Alternative electrode materials available**
 - Hastelloy-C
 - Monel
 - Titanium
- **In-line or submersible mounting**
- **NIST traceable certified cells ±1% meet USP requirements**

Applications

- **Pure Water Treatment**
 - Reverse Osmosis
 - Deionization
 - Distillation
- **Boiler Condensate**
- **Semiconductor Water Production**
- **Rinse Water Monitoring and Control**
- **TDS (Total Dissolved Solids)**
- **Salinity**
- **USP Purified Water**
- **WFI Water Production**
- **Ultra Pure Water**

Specifications

Models 3-2818-1 (0.01 cm⁻¹ Cell), 3-2819-1* (0.01 cm⁻¹ Cell), 3-2820-1* (0.1 cm⁻¹ Cell), Models 3-2821-1* (1.0 cm⁻¹ Cell)

* Certified versions available (add "C" suffix to part no.)

General				
Operating Range	3-2818, 3-2819	0.055 to 100 µS	18.2 MΩ to 10 KΩ	0.02 to 50 ppm
	3-2820	1 to 1000 µS	1 MΩ to 1 KΩ	0.5 to 500 ppm
	3-2821	10 to 10,000 µS	5 to 5,000 ppm	
Cell Constant Accuracy		±2% of reading (certified cells ±1%)		
Temperature Compensation Device		Pt1000		
Cable Length (use for the 2818, 19, 20, 21, 22 and 23)	3-2818, 3-2819-1 sensors 0.01 cells	4.6 m (15 ft) used with 8860, and 2850 sensor electronics.		
	Standard	4.6 m (15 ft)		
	Maximum	30 m (100 ft) all sensors when used with 9900

 ** Special Order for 0.01, 0.1 and 1.0 cells. Submersible installation not applicable for Sanitary Conductivity Electrode.
 ***Refer to the Signet Submersion Kit brochure (3-0000-707) located on our website for installation suggestions and options.

Temperature/Pressure Graphs

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification.

Operating Range Chart

Application Tips

- GF Signet advises all conductivity sensors be installed in a piping system as shown in Fig 1.
- Liquid levels must be high enough to cover vent hole on sensor body.
- Threads on models 2823 can be reversed in the field.
- Use 2819 series electrodes with the 3-2850-63 electronics and 8900 for applications requiring multiple measuring points.
- Install sensors in an area that will remain free of air bubbles and sediment build-up.
- Conductivity measurements are affected if electrodes are coated by process substances.

Ordering Notes

- 1) Alternate wetted materials and sensor lengths are available through special order.
- 2) The 2818 and 2819 maximum cable length is 7.6 m (25 ft) unless used with the 9900.
- 3) All other sensors - cable lengths of up to 30 m (100 ft) are available - consult factory.
- 4) Use PN 3-2820.390 or 3-2820.391 for a submersible threaded connection.

Special Order Options - Please consult the factory

High Temperature and Pressure options.

Wetted materials (Hastelloy-C, Monel and Titanium) and sensor lengths.

Cable length restrictions when using the 8860 or 2850 electronics on ALL cell constants 0.01 to 4.6 m (15 ft).

Wet-Tap, ball valve retractable sensor for long insertion length available as a special order.

Accessories and Replacement Parts

Mfr. Part No.	Code	Description
3-2820.390	198 840 223	¾ in. NPT fitting, 316 SS for use with 2822-1 and 2823-1 for submersible mounting
3-2820.391	198 840 221	¾ in. NPT fitting, Polypro replacement for 2819-1, 2820-1 or 2821-1
3-2820.392	198 840 222	½ in. NPT fitting, 316 SS for use with 2819-1, 2820-1 or 2821
3-2850-61	159 001 400	Universal junction box, conductivity electronics, digital (S ³ L) output
3-2850-62	159 001 401	Universal junction box, conductivity electronics, 4 to 20 output
5523-0322	159 000 761	Sensor cable (per ft), 3 cond. plus shield, 22 AWG (for cable extension through a junction box for the following sensors: 3-2820, 3-2821, 3-2822, 3-2823)
3-8050-1	159 000 753	Universal mount junction box

Note: GF Signet recommended sensors that require extended cable lengths be ordered from the factory.

Signet 2839-1V(D) to 2842-1V(D) PVDF Conductivity Electrodes

The Signet 2839-1V(D) to 2842-1V(D) Conductivity/Resistivity Electrodes are available in four cell constants from 0.01 to 10.0 cm^{-1} , and are suitable for a wide variety of applications from high purity water quality monitoring to weak acids and bases. 316 SS electrode surface finishes are controlled in a precision bead blasting operation to ensure measurement accuracy and repeatability.

The PVDF insulator and process connections are injection over-molded to minimize variance between electrodes. Double threaded connections in either $\frac{3}{4}$ in. NPT or ISO 7/1-R $\frac{3}{4}$ enable quick and easy installation in submersible or in-line configurations. Transmitter integral mounting kit and junction boxes are available as accessories.

A Certificate of Calibration is included with all 2839-1V(D) to 2842-1V(D) Conductivity/Resistivity Electrodes. The electrodes are calibrated to meet $\pm 2\%$ accuracy. Electrodes can be shipped back to the GF Signet factory for recertification.

The certificate includes calculated cell constant and temperature offset which when entered into the "custom cell" menu of any Signet meter would provide a 2% accuracy of the sensors reading.

Features

- $\pm 2\%$ accuracy - Custom calibration certificate provided
- Dual-threaded
- Compact electrode length for easy in-line installation in small pipe sizes
- Triple orifice flow-through design reduces clogging and bubble entrapment
- 316 SS electrodes with injection molded PVDF process connections and insulators
- Meets USP requirements

Applications

- Water Treatment & Water Quality Monitoring
- Reverse Osmosis
- Deionization
- Cooling Tower and Boiler Protection
- Distillation
- Desalination
- Demineralizer
- Semiconductor
- Aquatic Animal Life Support Systems

Specifications

General			
Operating Range			
	2839	0.055 to 100 μ S	0.02 to 50 ppm
	2840	1 to 1,000 μ S	0.5 to 500 ppm
	2841	10 to 10,000 μ S	5 to 5,000 ppm
	2842	100 to 200,000 μ S	50 to 100,000 ppm
Cell Constant Accuracy		\pm 2% when the information provided on the certificate of calibration is entered into the transmitter/meter or when wet calibrated with a traceable standard.	
Dual-Threaded Process Connection		-1V versions: $\frac{3}{4}$ in. NPT	
		-1VD versions: ISO 7/1-R 3/4	
Cable Length (use for the 2839, 40, 41 and 42)	standard	4.6 m (15 ft)	
	maximum	30 m (100 ft) all sensors when used with the 9900	
	0.01 cells	4.6 m (15 ft) used with 8860, and 2850*

Dual-Threaded Electrodes

3-2839-1V(D) (0.01 cell)

3-2840-1V(D) (0.1 cell)

Dual threads 3/4 NPT or ISO 7/1-R 3/4 front and back

3-2841-1V(D) (1.0 cell)*

Dual threads 3/4 NPT or ISO 7/1-R 3/4 front and back

3-2842-1V(D) (10.0 cell)*

* Although these electrodes look similar in design, there is an inherent difference. From the bottom view, the 2841 electrode features a simple plastic insert. However, the 2842 electrode features a complex plastic insert with four holes through which liquid flows.

Integral Mount Sensor

The 2839-2842 Dual Threaded Conductivity Electrodes can be directly mounted to a 3-9900-1 transmitter, 3-9900.396 direct conductivity module, 3-9900.396 angle adjust adapter and the 8052 Integral Mount Kit. Customer to modify the cable length of the standard cable assembly. See sensor manual for details.

Operating Range Chart

Temperature/Pressure Graphs

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, the PVDF process connector provided with the sensor may reduce the overall system working pressure.

Application Tips

- Use 2839 series electrodes with the 3-2850-63 electronics and 9950 or 8900 for applications requiring multiple measuring points.
- Liquid levels must be high enough to cover vent hole on sensor body.
- Install sensors in an area that will remain free of air bubbles and sediment build-up.
- Conductivity measurements are affected if electrodes are coated by process substances.
- Use Model 2839 with the 2850/8900 for low conductivity applications requiring multiple measuring points.

Ordering Notes

- 1) The Conductivity Certification tools are compatible with the following Signet Instruments: 8900, 9900.
- 2) The sensor cable can be extended up to 30 m (100 ft). See restrictions under general specifications.

Ordering Information

Sensors for use with 9900, 2850, and 8860 Instruments

Mfr. Part No.	Code	Cell Constant	Connection	Thread Size(s)	Cable Length
3-2839-1V	159 001 810	0.01 cm-1	Dual threaded	¾ in. NPT	4.6 m (15 ft)
3-2839-1VD	159 001 811	0.01 cm-1	Dual threaded	ISO 7/1-R 3/4	4.6 m (15 ft)
3-2840-1V	159 001 812	0.1 cm-1	Dual threaded	¾ in. NPT	4.6 m (15 ft)
3-2840-1VD	159 001 813	0.1 cm-1	Dual threaded	ISO 7/1-R 3/4	4.6 m (15 ft)
3-2841-1V	159 001 814	1.0 cm-1	Dual threaded	¾ in. NPT	4.6 m (15 ft)
3-2841-1VD	159 001 815	1.0 cm-1	Dual threaded	ISO 7/1-R 3/4	4.6 m (15 ft)
3-2842-1V	159 001 816	10 cm-1	Dual threaded	¾ in. NPT	4.6 m (15 ft)
3-2842-1VD	159 001 817	10 cm-1	Dual threaded	ISO 7/1-R 3/4	4.6 m (15 ft)

Special Order Options - Please consult the factory

Cable length extensions of up to 30 m (100 ft) are available.

For resistivity measurements above 10 MΩ using the 9900 and 9950, the 8860 cable lengths of the sensor should not exceed 4.6 m (15 ft).

For any sensor being used with the 2850-6X, cable length should not exceed 4.6 m (15 ft).

Accessories and Replacement Parts

Mfr. Part No.	Code	Description
3-2850.101-1	159 001 392	Plug-in NIST traceable recertification tool, 1.0 μS simulated, for use with 8900, 9900, 2850 and the 2850 4-20 mA output
3-2850.101-2	159 001 393	Plug-in NIST traceable recertification tool, 2.5 μS simulated, for use with 8900, 9900, 2850 and the 2850 4-20 mA output
3-2850.101-3	159 001 394	Plug-in NIST traceable recertification tool, 10.0 μS simulated, for use with 8900, 9900, 2850 and the 2850 4-20 mA output
3-2850.101-4	159 001 395	Plug-in NIST traceable recertification tool, 18.2 MΩ simulated, for use with 8900, 9900, 2850 and the 2850 4-20 mA output
3-2850.101-5	159 001 396	Plug-in NIST traceable recertification tool, 10.0 MΩ simulated, for use with 8900, 9900, 2850 and the 2850 4-20 mA output
3-2850-61	159 001 400	Universal junction box, conductivity electronics, digital (S ³ L) output
3-2850-62	159 001 401	Universal junction box, conductivity electronics, 4 to 20 output
3-8052	159 000 188	¾ in. integral mounting kit
5523-0322	159 000 761	Sensor cable (per ft), 3 cond. plus shield, 22 AWG, for cable extension through a junction box for the following sensors: 3-2840, 3-2841, 3-2842
3-8050-1	159 000 753	Universal mount junction box

Signet 2850 Conductivity/Resistivity Sensor Electronics and Integral Systems with PVDF Sensor

Universal Mount
Junction Box

NPT Mount
Junction Box

2850 Integral Conductivity System
for in-line installations, PVDF

The Signet 2850 Conductivity/Resistivity Sensor Electronics are available in various configurations for maximum installation flexibility. The universal mount version is for pipe, wall, or tank mounting and enables single or dual (digital versions only) inputs using any standard Signet conductivity/resistivity sensor. The threaded j-box version can be used with these same Signet sensors for submersible sensor mounting. It is also available as a combined integral system configuration for in-line mounting and includes a conductivity electrode in a choice of 0.01, 0.1, 1.0, 10.0 or 20.0 cm^{-1} cell constants. The 2850 is ideal for applications with a conductivity range of 0.055 to 400,000 μS or a resistivity range of 18.2 $\text{M}\Omega$ to 10 $\text{k}\Omega$.

All 2850 units are available with a digital (S^3L) output, or a single 4 to 20 mA. The digital (S^3L) output version can be paired with the 9900 or 9950 Transmitter to extend the distance between the measuring points to 120 m (400 ft).

The 8900 Multi-Parameter Controller allows for up to six 2850 (S^3L) output conductivity sensors to be used with the Signet 8900 Multi-Parameter Controller. All 2850 units are built with NEMA 4X/IP65 enclosures which allow output wiring connections with long cable runs of up to 305 m (1,000 ft).

The two-wire 4 to 20 mA output version is available with eight 4 to 20 mA output ranges for each electrode cell constant. Each range can be inverted and is field selectable.

EasyCal is a standard feature that automatically recognizes conductivity test solution values for simple field calibration. A certification tool is available for validation of the sensor electronics according to USP requirements.

Features

- Test certificate supplied with all sensors
- Custom cell constant programmed into the electronics
- Integral mount systems for quick and easy installation
- Compact design for maximum installation flexibility
- Extends the distance between the measuring point and the 9900 Transmitter to 120 m (400 ft)
- Digital (S^3L) interface or two-wire 4 to 20 mA output
- EasyCal with automatic test solution recognition
- For use with ALL Signet conductivity electrodes

Applications

- Water Treatment & Water Quality Monitoring
- Reverse Osmosis
- Deionization
- Demineralizer, Regeneration & Rinse
- Scrubber, Cooling Tower and Boiler Protection
- Aquatic Animal Life Support Systems

* If the 2850 is used with the 9900, it is not necessary to use the 9900 conductivity module.

Note:
The 9900 (with Direct Conductivity/Resistivity module) can run all conductivity sensors with 30 m (100 ft) of cable.
The 2850 (S^L) signal can be used for distances over 30 m (100 ft). The 2850 has a limited sensor cable input length of 4.6 m (15 ft).

-5X NPT Mount Junction Box

-6X Universal Mount Junction Box

Integral System includes the 2850 sensor electronics and a choice of Conductivity/Resistivity electrode.

Universal j-box assembly allows sensors without the 3/4 " rear thread to be used.

Submersible application options - Please see Signet Submersion Kit brochure, 3-0000.707, for more information.

Field Selectable Ranges for 4 to 20 mA Operation

The chart below indicates the field selectable ranges in which the 2850 sensor electronics can be set via internal switches. All ranges can be inverted if required. Signet Models listed below are compatible Conductivity/Resistivity electrodes.

0.01 Cell	0.10 Cell	1.0 cell	10.0 Cell	20.0 Cell
Signet Model 2839	Signet Model 2840	Signet Model 2841	Signet Model 2842	Signet Model 2823 (Special Order)
10 to 20 MΩ	0 to 2 μS	0 to 20 μS	0 to 200 μS	0 to 400 μS
2 to 10 MΩ	0 to 5 μS	0 to 50 μS	0 to 500 μS	0 to 1,000 μS
0 to 2 MΩ	0 to 10 μS	0 to 100 μS	0 to 1,000 μS	0 to 2,000 μS
0 to 1 MΩ	0 to 50 μS	0 to 500 μS	0 to 5,000 μS	0 to 10,000 μS
0 to 5 MΩ	0 to 100 μS	0 to 1000 μS	0 to 10,000 μS	0 to 20,000 μS
0 to 10 MΩ	0 to 200 μS	0 to 2000 μS	0 to 50,000 μS	0 to 100,000 μS
N/A	0 to 500 μS	0 to 5,000 μS	0 to 100,000 μS	0 to 200,000 μS
N/A	0 to 1,000 μS	0 to 10,000 μS	0 to 200,000 μS	0 to 400,000 μS

The 4 to 20 mA output ranges shown in this chart can be inverted using the internal switch Resistivity. Ranges are in BOLD
 Note: The 2819-2823 series Integral Systems must be ordered through special order products.

Operating Range Chart

The 2850 is capable of measuring conductivity and resistivity values over a wide range. Below is a chart of Signet Conductivity/Resistivity electrodes (listed in each range box) that is recommended for the specified measurement range.

Ordering Notes

- 1) All 2850 units can be used with any Signet Conductivity/Resistivity electrode
- 2) Integral systems are only offered with Signet models 2839-2842 electrodes. 2818-2823 require a special order sensor.
- 3) Dual channel units are only available in the universal mount junction box/remote mount configuration and with digital (S³L) output for use with the Multi-Parameter instruments.

Application Tips

- Maximum distance between sensor and 2850 electronics is 4.6 m (15 ft).

Please refer to Wiring, Installation, and Accessories sections for more information.

*For use when an integral 2850 system is desired (uses 2839-2842 series electrodes). Integral systems are shipped with a sensor and 2850 combined. Other 2850 systems are available with Signet 2818 to 2823 electrodes upon request. See individual electrode product pages for more information.

Mfr. Part No.	Code	Output
2850 Sensor Electronics** with EasyCal		
NPT mount junction box (¾ inch threaded) for standpipe or integral mounting, single input only		
3-2850-51	159 001 398	One input/one digital (S ³ L) output for use with 8900 , 9900 or 9950
3-2850-52	159 001 399	One input/one 4 to 20 mA output
Universal mount junction box for remote mount, single or dual input		
3-2850-61	159 001 400	One input/one digital (S ³ L) output for use with 8900 , 9900 or 9950
3-2850-62	159 001 401	One input/one 4 to 20 mA output

**For use when remote sensor mounting is desired. Compatible with ALL Signet conductivity electrodes. See individual electrode product pages for more information.

Signet 8860 Two-Channel Conductivity/Resistivity Controller

Member of the ProcessPro® Family of Instruments

The Signet 8860 Two-Channel Conductivity/Resistivity Controller is packed with a set of features and capabilities ideal for the real needs of water treatment applications. It accommodates two separate and independent input sources and can be powered with AC/DC voltage. The 8860 programs via a simple and intuitive menu system. The unit can also be programmed to measure a raw conductivity value by turning off the temperature compensation mode.

To control the process, the 8860 is equipped with four dry contact relays and three 4 to 20 mA output loops. Calculated measurement include Difference, Ratio or % Rejection. Two of the relays may be converted into open collector outputs with the flip of a switch. Operating modes for the relays and open collector outputs are high, or low alarm, pulse, or special USP alarm mode. The 8860 is offered with a NEMA 4X/ IP65 front panel with a self-healing window in a ¼ DIN package for easy panel installation.

Features

- Meets USP requirements for measuring raw conductivity, USP alarm mode
- Dual sensor input
- AC or DC powered
- Display and/or control: μS , mS, PPM or PPB (TDS), $\text{k}\Omega$, $\text{M}\Omega$, % rejection, difference, ratio, $^{\circ}\text{C}$ or $^{\circ}\text{F}$
- Three fully scaleable 4 to 20 mA outputs
- Two open collector outputs
- Four programmable relays
- Time delay relay function
- Proportional pulse control capability
- Compatible with ALL Signet conductivity electrodes
- Programmable temperature compensation
- NEMA 4X/IP65

Applications

- RO/DI System Control
- Demineralizer Regeneration and Rinse
- Scrubber, Cooling Tower & Boiler Protection
- Chemical Concentration
- Rinse Tank Water Quality
- Desalination
- Leak Detection
- Aquatic Animal Life Support Systems
- Aquaculture
- Environmental Studies

Specifications

General			
Compatible Electrodes	All Signet conductivity/resistivity electrodes		
Operating Range			
	Conductivity	0.055 to 400,000 $\mu\text{S}/\text{cm}$	
	Resistivity	10 $\text{K}\Omega\cdot\text{cm}$ to 18.2 $\text{M}\Omega\cdot\text{cm}$	0.055 to 100 $\mu\text{S}/\text{cm}$
	TDS	0.001 to 999999 ppm or ppb (display limit)	
	Temperature	Pt1000: -25 °C to 120 °C	-13°F to 248°F
Accuracy			
	Conductivity/Resistivity	$\pm 2\%$ of reading

Power Requirements			
	3-8860-AC	100 to 240 VAC $\pm 10\%$, regulated 50-60 Hz, 20 VA	
	3-8860	12 to 24 VDC $\pm 10\%$, regulated, 0.5 A max.	
Display	Alphanumeric 2 x 16 LCD		
Contrast	User selected, 5 levels		
Update Rate	1.5 seconds		
Current Outputs	(3 each) 4 to 20 mA, isolated, passive, fully adjustable and reversible		
Max. Loop Impedance	150 Ω @ 12 V		
	450 Ω @ 18 V		
	750 Ω @ 24 V		
Update Rate	Approx. 100 mS		
Accuracy	± 0.03 mA @ 25 °C, 24 VDC		
Open-Collector Outputs	(2 each) Isolated, 50 mA sink or source, 30 VDC max. with pull-up resistor		
Operational Settings	High, Low, USP, Pulse, Off		
Hysteresis	User adjustable		
Time Delay	0 to 6400 seconds		
Maximum Pulse Rate	400 pulses/min		
Alarm Contacts	(up to 4 each) SPDT relays		
Max. Voltage Ratings	5 A @ 30 VDC or 5 A @ 250 VAC		
Operational Settings	High, Low, USP, Pulse, Off		
Hysteresis	User adjustable		
Time Delay	0 to 6400 seconds		
Maximum Pulse Rate	400 pulses/min.		
Environmental			
Operating Temperature	-10 °C to 55 °C	14 °F to 131 °F	
Storage Temperature	-15 °C to 80 °C	5 °F to 176 °F	
Relative Humidity	0 to 95%, non-condensing		
Maximum Altitude	2,000 m (6,560 ft)		
Enclosure	NEMA 4X/IP65 (front face only)		
Shipping Weight			
	8860-AC	0.581 kg	1.3 lb
	8860	0.544 kg	1.2 lb
Standards and Approvals			
CE, FCC, UL, CUL			
RoHS compliant, China RoHS			
Manufactured under ISO 9001 for Quality and ISO 14001 for Environmental Management and OHSAS 18001 for Occupational Health and Safety

Ordering Notes

- 1) An optional splashproof rear cover can be ordered separately if needed.
- 2) Use the heavy duty wall mount bracket to mount instrument on a wall
- 3) Order RC filter kits to protect relays from voltage spikes.

Please refer to Wiring, Installation, and Accessories sections for more information.

Signet Conductivity/Resistivity Integral Systems with 9900 Transmitter

Member of the SmartPro® Family of Instruments

Signet has combined the 9900 SmartPro® Transmitter with conductivity and resistivity sensors to create integral systems that are easy to order and simple to install. Also available in flow, level, temperature and pressure configurations, each integral system features a 9900 Transmitter which provides a local and easy to read LCD display. The push button keypad makes it easy to navigate through the transmitter's menu. The DC-powered 9900 features a scalable 4 to 20 mA output and open collector for process control.

The integral system is also offered with a choice of Signet conductivity and resistivity sensors, Models 2839, 2840, 2841, and 2842 in 0.01, 0.1, 1.0, or 10.0 cm⁻¹ cell constants, respectively. These sensors are field proven and reliably perform in ranges from 18.2 MΩ (0.055 μS) to 200,000 μS. They are ideal for installation into standard pipes via the 3/4 inch sensor threaded (NPT or ISO) process connection. The sensors are available with 316 stainless steel and PVDF wetted materials.

Features

- Local Display for sensor mounted instruments
- Provides 4 to 20 mA output
- "At a glance" visibility
- "Dial-type" digital bar graph
- NEMA 4X/IP65 enclosures
- Large selection of Signet Conductivity and Resistivity sensors available

Applications

- RO/DI System Control
- Cooling Tower Control
- Water Quality Monitoring
- Filtration Systems
- Scrubber Systems
- Boiler Condensate
- Semiconductor Water Production
- Leak Detection

Signet 2250 Submersible Hydrostatic Pressure Sensor For Level and Depth Control

Blind Transmitter or Digital (S³L) Sensor

The Signet 2250 Hydrostatic Level Sensor for level and depth control has a one-piece injection molded PVDF body and ceramic diaphragm for superior compatibility in corrosive liquids. Utilizing hydrostatic pressure, the 2250 disregards false level signals from steam vapors, foam or any other debris on the liquid surface. Two pressure ranges allow for optimal resolution matched to your sensing needs. Solid state circuitry eliminates drift (no internal potentiometers).

These sensors are available with a proprietary digital (S³L) output, or 4 to 20 mA output. The extended cable and capillary tubing with the union connection and a customer supplied conduit, allow submersion in process vessels.

Features

- Level and depth measurement
- 4 to 20 mA or digital (S³L) output
- Flush ceramic diaphragm
- Easy submersible installation
- Choice of two pressure ranges
- Standard union connection and extended cable and capillary tubing (10 m)

Applications

- Inventory Management
- Storage Tank Monitoring
- Neutralization Tanks
- Plating Lines
- Waste Sumps
- Clarifiers
- Overflow Protection

Specifications

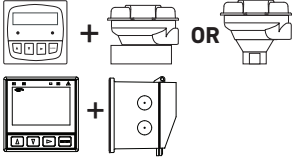

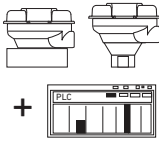

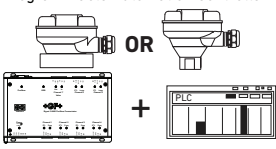

General		
Output	Digital (S ³ L) or 4 to 20 mA	
Accuracy for all pressure ranges	±1% of full scale	
Resolution	-XU	0.001 psi
	-XL	0.01 psi
Response Time	< 100 ms	
Wetted Materials		
Union and Union Bushing	PVC-U	
Sensor Housing	PVDF	
Diaphragm	Ceramic	
Diaphragm Seal	FKM	
Electrical		
Power Requirements		
	Digital (S ³ L)	5 to 6.5 VDC <1.5 mA (power supplied by the 8450, 8900, 9900 and 0486)
	4 to 20 mA	12 to 24 VDC ±10%, regulated
Cable Length	10 m (32.8 ft)	
Cable Type	3 cond. plus shield, 22 AWG, PVC jacketed, Blk/Red/White/Shld with capillary tube	
Digital (S ³ L) Output	Serial ASCII, TTL level 9600 bps.	
	Reverse polarity and short circuit protected.	
4 to 20 mA Output		
Accuracy	±32 µA	
Resolution	< 5 µA	
Span	4 to 20 mA factory calibrated to operating ranges shown below	
Max. Loop Impedance	100 Ω @ 12 V	
	325 Ω @ 18 V	
	600 Ω @ 24 V	
Max. Temperature/Pressure Rating		
Operating Temperature	-15 °C to 85 °C	5 °F to 185 °F
Storage Temperature	-20 °C to 100 °C	-4 °F to 212 °F
Operating Pressure	-XU: 0 to 0.7 bar (0 to 10 psig)	
	-XL: 0 to 3.4 bar (0 to 50 psig)	
Proof Pressure	-XU: 1.4 bar (20 psig)	
	-XL: 5.2 bar (75 psig)	
Shipping Weight		
	0.560 kg	1.23 lb
Standards and Approvals		
	CE, FCC	
	RoHS compliant, China RoHS	
	Manufactured under ISO 9001 for Quality and ISO 14001 for Environmental Management and OHSAS 18001 for Occupational Health and Safety	

See Temperature and Pressure graphs for more information.

Customer supplied pipe extension or conduit with pipe assembly*			
Signet 2250 Submersible Hydrostatic Pressure Sensor with union connection, extended cable and capillary tubing (10 m)**			
		All sold separately	

*Refer to the Signet Submersion Kit brochure (3-0000.707) located on our website for installation suggestions and options.
 ** Cable must be exposed to the atmosphere

Ordering Notes

- 1) Instrument is sold separately. The following instrument part numbers are compatible with the 2250: 8900, 9900 and 9950 transmitters and 0486 Profibus Concentrator.
- 2) Union mount installs into pipe w/end connector and union nut.
- 3) Refer to the Signet Submersion Kit brochure (3-0000.707) located on our website for installation suggestions and options.

Pressure/Level ranges*

3-2250-XU	0 to 10 psi = 0 to 7.03 m = 0 to 23.06 ft
3-2250-XL	0 to 50 psi = 0 to 35.15 m = 0 to 115.32 ft

*Ranges calculated using specific gravity of water. Maximum ranges depending on its specific gravity.

Temperature/Pressure Graphs

Please refer to Wiring, Installation, and Accessories sections for more information.

2260 Ultrasonic Level Transmitters

The type 2260 is a rugged, high performance ultrasonic level measurement transmitter, having transducer and processing electronics and a display/programming unit incorporated in one single housing.

All type 2260 Level Transmitters are using established high end pulse echo transducers, which provide narrow beam angles and reliable measurement ranges up to a distance of 15 meters.

For small, stand alone tanks the transmitter provides a simple 2-wire 4 to 20 mA output, with additional power relay contacts. It can be programmed using push buttons and the large, graphic display. For large and/or multiple tank applications versions with HART interface are recommended, communicating directly with a panel mount controller or PLC. The HART protocol can easily be used for programming these versions.

Features

- 2-wire compact transmitters
- Non-contact level metering
- Narrow 5° beam angle
- Level, volume and open channel flow
- Fully temperature compensated electronics
- Outstanding signal processing software providing highly accurate measuring results
- PP or PVDF sensor body provides best chemical resistance
- Quick-set menu for efficient installation
- Plug-in keypad and display
- Switching relay for high / low alarm
- 4 to 20 mA / HART interface (Optional)
- Secondary lightning protection
- Intrinsically safe (Option)
- 32-point linearization

Applications

- River water
- Seawater
- Potable water
- Demineralized water
- Treated water

2260 Ultrasonic Level Transmitters with Ex Approval

The type 2260 is a rugged, high performance ultrasonic level measurement transmitter, having transducer and processing electronics and a display/programming unit incorporated in one single housing.

All type 2260 Level Transmitters are using established high end pulse echo transducers, which provide narrow beam angles and reliable measurement ranges up to a distance of 15 meters (49.2 ft).

For small, stand alone tanks the transmitter provides a simple 2-wire 4 to 20 mA output, with additional power relay contacts. It can be programmed using push buttons and the large, graphic display. For large and/or multiple tank applications versions with HART interface are recommended, communicating directly with a panel mount controller or PLC. The HART protocol can easily be used for programming these versions.

For hazardous areas the type 2260 Level Transmitters are available with explosion proof approvals.

Features

- 2-wire compact transmitters
- Non-contact level metering
- Narrow 5° beam angle
- Level, volume and open channel flow
- Fully temperature compensated electronics
- Outstanding signal processing software providing highly accurate measuring results
- PP or PVDF sensor body provides best chemical resistance
- Quick-set menu for efficient installation
- Plug-in keypad and display
- 4 to 20 mA / HART interface (Optional)
- Secondary lightning protection
- Intrinsically safe (Option)
- 32-point linearization

2270 Ultrasonic Level Sensor

The type 2270 is a rugged, high performance ultrasonic level measurement sensor, having transducer and processing electronics incorporated in one single housing. It provides all the sophisticated echo detection features of the well accepted 2260 Ultrasonic Level Transmitters.

For single and multiple tank applications 2-wire sensors are recommended using either HART protocol or 4 to 20 mA for the direct communication with a panel mount controller or a PLC.

Either for liquid level measurement in sumps or tanks, for tank contents measurement, or open channel flow measurement, the 2270 Level Sensors provide the answer. Sensing ranges up to 6 m (19.7 ft) are available. PP and PVDF sensor bodies provide best chemical resistance in applications where concentrated chemical shall be detected.

Features

- 2 wire compact sensor
- Non-contact level measuring
- Narrow 5° beam angle
- Level, volume and open channel flow
- Compact housing
- 32 points of linearization
- Fully temperature compensated electronics
- Outstanding signal processing software providing highly accurate measuring results
- PP or PVDF sensor body provides best chemical resistance
- Secondary lightning protection
- 4 to 20 mA / HART interface

Applications

- River water
- Seawater
- Potable water
- Demineralized water
- Treated water

Specifications (Type 2270-X-XX-4)

General	
Range	0.2 to 4 m / 0.65 to 13 ft
Total Beam Angle	6°
Measuring Frequency	80 kHz
Accuracy *	± (0.2 % of measured distance plus 0.05 % of range)
Resolution	<2 m (6.6 ft): 1 mm (0.04 in.), 2 to 4 m (6.6 to 13.1 ft): 2 mm (0.08 in.)
Environmental	
Process Temperature	-30 °C to +90 °C (-22 °F to +194°F)
Ambient Temperature	-30 °C to +80 °C (-22 °F to +176°F)

2280 Tuning Forks

Type 2280 Tuning Forks are suitable for level detection of liquids or granular, powdered solids. Mounted on tanks filling/emptying can be controlled using these devices just as well they can generate fail-safe alarms providing overflow or dry run protection.

The operation principle is based on the electronic circuit exciting the fork probe making it vibrate. As the medium reaches and covers the fork its vibration changes. The electronics senses the change of vibration and gives output signal after a selected delay.

Features

- Maintenance free vibrating principle
- Independent of the liquid conductivity, dielectric constant, viscosity, pressure and temperature
- Selectable sensitivity
- Relay or electronic output
- Temperatures up to 130 degrees
- ATEX and WHG approvals
- IP67, 65/68 protection

CE, WHG, ATEX

Applications

- Potable Water
- River Water
- Cooling Water
- Demineralized Water
- Water/Glycol Solutions
- Chemicals

2281 Multipoint Switch

The Multipoint Switch is based on the conductivity principle and can be applied to liquids with conductivity higher than 10 $\mu\text{S}/\text{cm}$.

The probes have to be placed into the tank for level detection. The probe length should be in accordance with the level to be detected. Filling liquid in the tank will change the electrical conductivity between the reference probe and the outer probes. The established connection will be converted and activate a relay providing the output.

Features

- Easy on site probe length configuration
- Fast installation due to 2 to 4 individual switching points integrated in one sensor
- Up to 4 relays for pump and valve control
- Adjustable sensitivity
- Adjustable delay time

Applications

- Potable Water
- Cooling Water
- Chemicals
- Pump Control

Accessories

Probe dimension

Probe separator 2281-5 spacer, to be used every 0.5 m (19.69 in.)

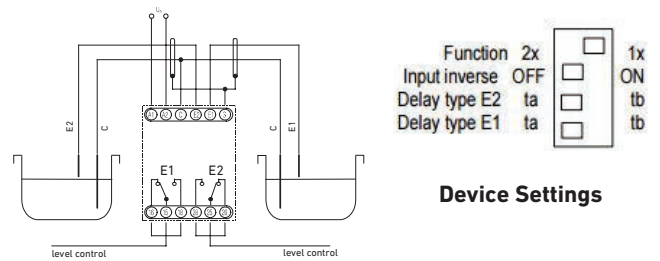

Wiring

1 SPDT Relay: Type 2281-1-Relay
Part No.: 159 300 258

Single Level Monitoring

2 SPDT Relay: Type 2281-2-Relay
Part No.: 159 300 259

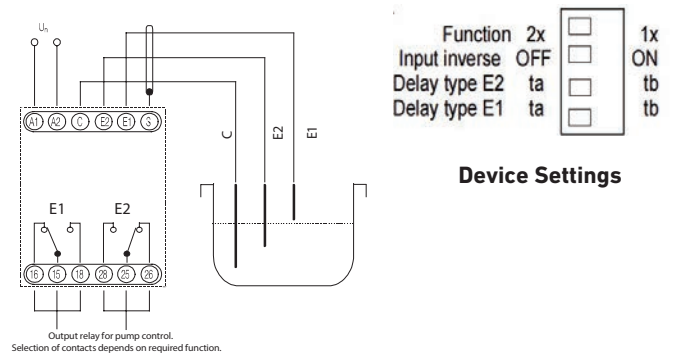

To detect two independent levels in one or two separate tanks

Level Control

One Tank

Level Control - Two levels in one tank

How to Order

The 2281 can be utilized for alarming 2-4 level set-points, any combination of LO or HI levels. The 2281 housing must always remain out of the fluid being measured.

Step 1 - Select Multiprobe Enclosure based upon the quantity of desired alarms 2, 3, or 4.

Step 2 - Select one stainless steel rod to serve as the reference electrodes. Choose either a 19.69 in., 39.37 in., or 59.06 in., the length should be longer than any of the alarm probes. Note: The rod can be cut shorter onsite with a hack saw for a precise fit.

Step 3 - Select one stainless steel rod for each alarm set-point (up to four rods). For each length choose either a 19.69 in., 39.37 in., or 59.06 in. Note: The rod can be cut shorter onsite with a hack saw for a precise dimension.

Step 4 - Select probe insulator, a minimum of one is required. It's suggested to add one more for every additional 20 in. of assembly length (maximum 3).

Step 5 - Select the amount of alarm relays to match the amount of alarm set-points. Choose either 2 or 1 and 2=3, or 2 and 2=4.

Options			Enclosure NEMA 4A, fiberglass with SS hardware, 7.69 in. L x 7.69 in. W x 6.38 in. D
	6205-0002	159 000 858	1 meter length DIN Rail
	6205-0003	159 000 859	End clip for DIN Rail

2282 Guided Float Switch

The Guided Float Switch is designed for economical control of liquids in tanks. The switch is remarkable for its maintenance-free compact design and reed contacts with high switch capacity. It can easily be installed in water applications as well as in chemical applications.

The encapsulated reed contact is operated by the magnet. The switching function (N/O contact/N/C contact) is determined by the installation position. The switching function is reversed by simply rotating the switch through 180 °.

Features

- Optimized chemical compatibility
- Very compact design
- PP and PVDF version available
- For small tanks

Applications

- Cooling Water
- Demineralized Water
- Water/Glycol Solutions
- Chemicals

2284 Ultrasonic Gap Switch

The Ultrasonic Gap Switch consists of Polyphenylene Sulphide (PPS) and is high corrosion resistant in most liquids. The gap switch is designed for high or low level alarm in different tank applications as well as pump control. However, if there is a liquid present, the signal will be transmitted across the gap and the integral electronics will switch the output circuitry to signal the presence of a liquid.

It can be mounted in any position in a tank using a $\frac{3}{4}$ in. or 1 in. thread available in BSP and NPT thread forms.

Features

- Relay output
- Corrosion resistant PPS body
- 1 in. and $\frac{3}{4}$ in. threaded mounting
- Small in-tank dimensions
- Compact sensor for narrow spaces
- Self contained full plastic body
- No moving parts

Applications

- Cooling Water
- Demineralized Water
- Water/Glycol Solutions
- Chemicals
- Pump Control

2285 Level Float Switch

The 2285 Level Float Switch is suitable for level switching of various liquids, sewage in shafts, tanks, basins or cisterns. The double-chambered float is made of injection molded tough polypropylene that ensures good waterproof protection.

The contacting microswitch is incorporated in the float. The cable of the level switch is absolutely waterproof and PVC insulated. Different control tasks such as liquid level monitoring and pump control can be realized. It is a mercury-free contact and suitable for level switching of drinking water, raw water or polluted liquids with low solid content.

The level switching is done when the contact reaches the $\pm 45^\circ$ switching angle. The switching differential of the level switch is adjustable by the position of the counterweight on the cable. The level switches should be arranged appropriately in case of multi-level switching tasks to avoid undesired tangling of the cables.

Features

- Hermetically molded, double chamber
- Mercury free operated micro switch
- Use for drinking and wastewater

Applications

- Tap water
- River water
- Sump shafts

2290 Non-contact Radar Level Transmitter

PP

The 25 GHz (K-band) 2290 Pulse Radars are the most progressive non-contact level transmitter technology for industrial processes. With an excellent accuracy, compact antennas and a user-friendly set-up the 2290 is an effective, simple, low cost choice for demanding level applications. GF's new K-band radar featuring ± 3 mm (± 0.1 in.) accuracy and short dead band excels with its full plastic housing. Its antenna range incorporates a stainless steel horn and enclosed plastic tube choices.

The enclosed antenna versions can be replaced without removing the antenna enclosure from the process. Local programming of type 2290 is aided by a plug-in display module. The signal processing algorithm of the 2290 is based on years of experience with non-contact level measurement making it an excellent choice for applications simple and challenging alike.

Features

- 19° beam angle
- Tank mapping function
- Large dot matrix LCD display
- Predefined tank shapes
- Works with fumes, condensation, and light foam layers

Applications

- Bulk Storage Tanks
- Day Tanks
- Process vessels for Mixing and Batching
 - Buffer Tanks
 - Conditioning vessels
 - Metal or Plastic

Dimensions

PP horn antenna
Lmin: 200 mm (7.9 in.)

Stainless Steel 316 Ti horn antenna
Lmin: 200 mm (7.9 in.)

Stainless Steel 316 Ti horn antenna & temperature isolater
Lmin: 200 mm (7.9 in.)

Specifications

General		Level, Distance; Calculated values: Volume, Mass
Measured Values		Level, Distance; Calculated values: Volume, Mass
Wetted Parts	Horn Antenna	Stainless Steel 316 Ti
	Antenna enclosure	PTFE, PP
Frequency of the Measuring Signal		~25 GHz (K-band)
Measuring Range		0.2 m – 18 m (0.65 – 59 ft) (depending on ϵ_r of the process liquid)
Accuracy		± 3 mm (0.1 inch)
Linearity Error (as per EN 61298-2)		< 0.5 m: ± 25 mm (< 1.6 ft: ± 0.9 in.); 0.5 – 1 m: ± 15 mm (1.6 – 3.2 ft: ± 0.6 in.); 1 – 1.5 m: ± 10 mm (3.2 – 4.9 ft: ± 0.4 in.); 1.5 – 8 m: ± 3 mm (4.9 – 26.3 ft: ± 0.1 in.); > 8 m: $\pm 0.04\%$ (> 26.3 ft: $\pm 0.04\%$) of the measured distance
Beam Angle		Minimum 19°
Minimum dielectric constant ϵ_r of the Medium		1.9 (refer to range diagram below)
Resolution		1 mm (0.04 in.)
Temperature Error (as per EN 61298-3)		0.05% FSK / 10°C (50°F) $-20^\circ\text{C} \dots +60^\circ\text{C}$ ($-68^\circ\text{F} \dots +140^\circ\text{F}$)
Power Supply Voltage		20 V ...36 V DC
Output Digital Communication		4 – 20 mA + HART
Output Display		64 x 128 Dot Matrix LCD Graphical display unit
Measuring Frequency		10...60 sec as per the application settings
Antenna Diameter		38 mm (1 1/2 in.)
Antenna Material		Horn: Stainless Steel; enclosure: PP, PTFE
Medium Process Temperature		$-30^\circ\text{C} \dots +100^\circ\text{C}$ ($-22^\circ\text{F} - 212^\circ\text{F}$), (up to 120°C (248°F) for max. 2 min); with PP antenna enclosure: max.: 80°C (176°F) 2290 HT (high-temperature, SS316 horn antenna): $-30^\circ\text{C} \dots +180^\circ\text{C}$ ($-22^\circ\text{F} \dots +356^\circ\text{F}$)
Maximal Medium Pressure		25 bar at 120°C (248°F); with plastic antenna enclosure: 3 bar at 25°C (77°F)
Ambient Temperature		$-20^\circ\text{C} \dots +60^\circ\text{C}$ ($-4^\circ\text{F} - 140^\circ\text{F}$)
Process Connection		DN 40 / 1 1/2 in. BSP, 1 1/2 in. NPT thread
Ingress Protection		IP 67
Electrical Connection		2x M 20 x 1.5 cable glands + internal thread for 2x 1/2 in. NPT cable protective pipe, cable outer diameter: $\varnothing 7 \dots \varnothing 13$ mm (0.3 ... 0.5 inch), wire cross section: max. 1.5 mm^2 (AWG 15), wire cross section: max. 1.5 mm^2
Electrical Protection		Class III
Housing Material		Plastic (/PBT)
Sealing		FKM
Communication Certifications		R&TTE, FCC
EX-Approvals		ATEX (ia): II 1/2 G Ex ia IIB T6...T5 Ga/Gb ICEX (ia): EX ia IIB T6...T5 Ga/Gb CE, FCC

2291 Guided Wave Radar Level Transmitter

The 2291 Guided Wave Radar level transmitter is designed for continuous level measuring of conductive or non-conductive liquids, pulps and solids. The 2291 level gauge operates based on the well-known TDR (Time Domain Reflectometry) principle. Micropulses are sent along a probe guide at the speed of light. As soon as the impulse reaches the surface of the medium, it is reflected back to the electronic module. Level distance is directly proportional to the flight time of the impulse.

The reflected signal is dependent on the dielectric constant of the material; the feasibility of the measurement is $\epsilon_r \geq 1.9$. The TDR technology is unaffected by the properties of the medium as well as that of the space above it. Measurement is also unaffected by the change in the physical properties of the materials such as temperature, pressure, dielectric constant.

Features

- Measuring range up to 6 m (19.6 ft)
- Accuracy: ± 5 mm (0.2 in.)
- PP / PFA coated probes available on request
- Rod & cable versions available
- Minimum ϵ_r 1.9
- 2-wire version
- Graphic LCD display
- 4 to 20 mA + HART output
- Medium temperature range: -30 °C to +90°C (-22 °F to +194 °F)
- Maximum process pressure: 40 bar (580 psi)
- IP67 protection

Applications

- Inventory Tanks
- Day Tanks
- Process Vessels for Mixing & Batching
- Bypass Applications (requires calibration)
- Stilling-wells
- Powders
- Slightly Conductive Foams
- Low Dielectric Constant Liquids

Dimensions

Type 2291 Cable Version
L = 6 m (19.69 ft)

Type 2291 Rod Version
L = 2 m (6.56 ft)

Specifications

General	
Measured Values	Level, Distance; Calculated values: Volume, Mass
Measuring Range	Depends on the probe type and dielectric constant (ϵ_r) of the measured medium
Probe Types	Mono cable, mono rod
Accuracy: Linearity Error ¹	For liquids: ± 5 mm (0.2 in.), if probe length ± 10 m (32 ft): ± 0.05 % of the probe length
Accuracy: Resolution	± 3 μ A
Minimal ϵ_r of the Medium	1.9
Power Supply	18 V... 35 V DC
Output: Digital Communication	4-20 mA + HART
Output: Display	Graphical LCD display unit
Medium Temperature	-30 °C... +90 °C (-22 °F... +194 °F),
Maximum Medium Pressure	4 MPa (40 bar g/ 580 psi g); with plastic lined flange: max. 2.5 MPa (25 bar g/ 363 psi g)
Ambient Temperature	-20 °C... +60 °C (-4 °F... +140 °F)
Process Connection	1 in. BSP, 1 in. NPT Thread
Ingress Protection	IP 67
Electrical Connection	2x M20x1.5 cable glands + internal thread for 2x ½ in. NPT cable protective pipe, cable outer diameter: $\varnothing 7$... $\varnothing 13$ mm (0.3 ... 0.5 in.), wire cross section: max. 1.5 mm ² (AWG 15)
Electrical Protection	Class III
Housing Material	Plastic (PBT)
Sealing	FKM, On request: FFKM, EPDM
Mass (head unit)	1.5 kg (3.3 lb)
EX-Approvals	ATEX (ia): II 1/2 G Ex ia IIB T6...T5 Ga/Gb ICEX (ia): EX ia IIB T6...T5 Ga/Gb

Signet 2350 Temperature Sensor

Blind Transmitter or Digital (S³L) Sensor

The Signet 2350 Temperature Sensor has a one piece injection molded PVDF body that is ideal for use in high purity applications. It also outlasts metal sensors in aggressive liquids and eliminates the need for costly custom thermowells. These sensors are available with a proprietary digital (S³L) output or field-scaleable 4 to 20 mA output.

Dual threaded ends (3/4 in. NPT) allow submersion in process vessels, or in-line installation with conduit connection. An integral adapter kit (sold separately) may be used to create a compact assembly with field mount versions of the Signet 9900 Transmitter.

Features

- 4 to 20 mA or digital (S³L) output
- Standard 3/4 in. NPT process connection
- One-piece injection molded PVDF body
- Pt1000 platinum RTD in extended tip for quick response
- Easy installation
- Threaded for in-line or submersible installation

Applications

- **Plating Bath Temperature Control**
- **Heat Exchange Monitor**
- **R.O. and D.I. System Monitor**
- **Hot/Cold Mixing System Monitor**
- **Data Acquisition**
- **Cooling Loops**
- **Effluent Monitoring**
- **HVAC**
- **Chemical Processing**

Signet 2350 Temperature Sensor		
		All sold separately

*For tank or wall mount installations, user must use the Universal Adapter Kit (3-8050)
**Refer to the Signet Submersion Kit brochure (3-0000.707) located on our website for installation suggestions and options.

Ordering Notes

3-2350-X sensor can be mounted with an instrument in an integral configuration by doing the following:

- 1) Order Integral adapter kit 3-8052 (sold separately) to connect the instrument (sold separately) directly onto the sensor.
- 2) Order an instrument (sold separately). The following instrument part number is compatible with the 2350 for integral mounting: 3-9900-1.
- 3) Refer to the Signet Submersion Kit brochure (3-0000.707) located on our website for installation suggestions and options.

Application Tips

- For submersible sensor mounting, always use a water tight conduit and a cable gland to prevent moisture intrusion.
- To extend the cable, use a 3-conductor shielded cable and junction box.
- Sensors with extended cables available, contact Special Order products.

Temperature/Pressure Graphs

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification. When using a PVDF sensor in a PVC piping system, the fitting will reduce the system specification.

Signet 2450 Pressure Sensor

1/2 in. union mount

Blind transmitter or digital (S³L) sensor

The 2450 Pressure Sensor has a one-piece injection molded PVDF body and ceramic diaphragm for superior compatibility in corrosive liquids. Three pressure versions allow for optimal resolution matched to your sensing needs. Solid state circuitry eliminates drift (no internal potentiometers).

These sensors are available with a proprietary digital (S³L) output, or field-scalable 4 to 20 mA output. Dual-threaded ends allow submersion in process vessels or in-line installation with conduit connection. Integral adapters (sold separately) may be used to create a compact assembly with a field mount style of the Signet 9900 Transmitter.

Features

- Test certificate included
- 4 to 20 mA or digital (S³L) output
- 1/2 in. male union process connection
- One-piece injection molded PVDF body
- Flush ceramic diaphragm
- Easy installation
- Choice of three pressure ranges
- Pressure or level measurement
- NEMA 4X/IP65 rated when using the 3-8052-1

Applications

- Level or Depth Sensing
- HVAC
- Scrubber Systems
- Pump Protection
- Water Management
- Irrigation Systems
- Wastewater
- Chemical Processing
- Pressure Regulation/Monitoring

	<p>All sold separately</p>				
<p>In-Line Installation - Fittings customer supplied</p>					

* The capillary tube located at the rear of the sensor must be exposed to the atmosphere.

Temperature/Pressure Graphs

Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification. When using a PVDF sensor in a PVC piping system, the fitting will reduce the system specification.

Application Tips

- These sensors can also be used for tank level measurements.
- Place a ball valve between tank and 2450 sensor for maintenance ease.
- Back end of sensor must be exposed to atmospheric pressure.
- To extend the cable, use a 3-conductor shielded cable & junction box.
- For submersible sensor mounting, always use the 3-2250 Submersible Hydrostatic Pressure Sensor.
- EPDM available contact special order

Ordering Notes

Any sensor can be mounted with an instrument in an integral configuration by doing the following:

1. It is advised to protect the capillary tube located on the back of the sensor with the NEMA 4X/IP65 rated 3-8052-1.
2. Order Integral adapter kit PN 3-8052 or NEMA 4X/IP65 rated 3-8052-1 (sold separately) to connect the instrument (sold separately) directly on to the sensor.

3. Order an instrument (sold separately). The following instrument part numbers are compatible with the 2450 for integral mounting: 3-9900-1.
4. Union mount version installs into pipe with end connector and union nut. See Installation and Wiring section for more information on parts required.

Signet Temperature Integral System with 9900 Transmitter

Member of the SmartPro® Family of Instruments

Signet has combined the 9900 SmartPro® Transmitter with the 2350 Temperature sensors to create integral systems that are easy to order and simple to install. Also available in conductivity, flow, level, and pressure configurations, each integral system features a 9900 Transmitter which provides a local and easy to read LCD display. The push button keypad makes it easy to navigate through the transmitter's menu. The DC-powered 9900 features a scalable 4 to 20 mA output and open collector for process control.

The integral system is offered with a Signet 2350 Temperature sensor and is available in a range of -10 °C to 100 °C (14 °F to 212 °F). Sensor installation is achieved into standard pipes via the 3/4 in. sensor threaded NPT process connection. The sensor is available with PVDF wetted materials.

Features

- Local display for sensor mounted instruments
- Provides 4 to 20 mA output
- "At a glance" visibility
- "Dial-type" digital bar graph
- NEMA 4X/IP65

Applications

- Cooling Tower Control
- Filtration Systems
- Chemical Production
- Semiconductor Water Production
- Aquariums
- Aquatic Monitoring
- Heat Exchangers
- Galvanic Plating

System Overview

Integral Installation

Signet Model 9900 Transmitter
with 3-8052 Integral Adapter Kit

Signet 2350

Signet Pressure Integral Systems with 9900 Transmitter

Member of the SmartPro® Family of Instruments

Signet has combined the 9900 SmartPro® Transmitter with the 2450 Pressure sensors to create integral systems for level applications that are easy to order and simple to install. Also available in conductivity, temperature, and flow configurations, each integral system features a 9900 Transmitter which provides a local and easy to read LCD display. The push button keypad makes it easy to navigate through the transmitter's menu. The DC-powered 9900 features a scalable 4 to 20 mA output and open collector for process control.

The integral system offers a local display, a scalable 4 to 20 mA output and open collector for process control. A 2450 Pressure sensor with wetted material of ceramic and PVDF installs into a ½ in. union fitting. The 2450 Pressure sensor is offered in three pressure ranges which could also be used as a hydrostatic level for tank level management.

Features

- Utilizes the 2450 sensor for pressure or hydrostatic level measurement
- Local display for sensor mounted instruments
- Provides 4 to 20 mA output
- "At a glance" visibility
- "Dial-type" digital bar graph
- NEMA 4X/IP65

Applications

- Water Quality
- Filtration Systems
- Chemical Production
- Liquid Delivery Systems
- Level Management
- Media Filtration
- Reverse Osmosis Systems

System Overview

Integral Installation	
Signet Model 9900 Transmitter with 3-8052 Integral Mount Kit	
Signet 2450 Pressure Sensor	
Customer supplied standard ¾ in. fittings	

Specifications

See individual transmitter and sensor product pages for more information.

Sensor can be mounted through the side of a tank for hydrostatic level measurement.

Tip: Add a ball valve to isolate the sensor from the tank to allow the removal of the sensor for service.

Pressure/Level Ranges*:	
3-2250-XU	0 to 10 psi = 0 to 7.03 meters = 0 to 23.06 ft
3-2250-XL	0 to 50 psi = 0 to 35.15 meters = 0 to 115.32 ft

It is not recommended to use the 2450 Pressure sensor mounted inside a tank. For all tank installations where the sensor is mounted inside a tank, use 3-2250 Hydrostatic Level sensor only.

Dimensions

Ordering Notes

Integral Mounts are available with all parts conveniently assembled (transmitter, sensor, and mounting kit). Alternatively, all three parts can be purchased separately. See individual transmitter and sensor pages for more information.

Only available in Europe.

Signet pH/ORP Buffer Solutions

The Signet pH buffers are ideal for many calibration requirements. The liquid solutions are conveniently packaged in one pint bottles; the powder pillows are packaged in low weight, single-use containers which can be mixed with water. All pH buffers are color coded for easy identification; 4.01 pH is red, 7.00 pH is yellow, and 10.00 pH is blue.

The pH buffers are traceable to NIST standards and certificates are available upon request. They are accurate to within ± 0.01 pH units @ 25 °C and have long term stability.

These solutions are temperature sensitive and are provided with temperature correction values for the most accurate calibration. For applications that require ORP calibration, the pH 4 and pH 7 buffers can be mixed with quinhydrone powder for the correct measurement values of +264 mV and +87 mV respectively.

Features

- NIST traceable
- Easily identifiable color coded buffer solutions
- Liquid or powder versions
- Temperature compensated values
- Kits for easy use

Calibration Tips

1. The pH and ORP solutions can be used for calibrating more than one sensor within a day. However, the solutions must remain free of debris and must not be diluted by rinse water from previous calibrations.
2. ORP solutions made with quinhydrone are very unstable and may not read properly once exposed to air for a prolonged time. These solutions must be disposed of within an hour.
3. All other calibration solutions must be disposed of at the end of one day. Proper disposal is simply done by running tap water while pouring the used solutions slowly down the drain or per local requirements.
4. Use tap or deionized water to rinse the solutions off of the sensors.

Understanding pH and ORP Calibration

Why do electrodes need to be calibrated?

Calibration ensures the pH or ORP electrode continues to function properly and accurately. pH and ORP electrode readings vary over time due to changes in reference voltage or aging of the pH glass. pH electrode output decreases with age, coating, elevated temperatures and pH glass erosion (by abrasion, and strong sodium hydroxide (NaOH), potassium hydroxide (KOH) or hydrofluoric acid (HF) solutions).

Calibration helps to identify when the electrode is worn out and needs to be replaced.

How often should an electrode be calibrated?

- **New applications** Weekly calibration is recommended for a new process where a pH or ORP electrode has never been installed. If the electrode calibrates within acceptable limits* over the next few weeks, change the calibration schedule to once every two weeks and continue to extend the schedule to meet your needs.
- **Existing applications** It is recommended the electrode be calibrated at least every month to ensure proper function* of the electrode.
- **Critical applications** In locations where measurement accuracy is extremely critical, the electrode should be calibrated as frequently as required for proper performance*.
- **Dirty applications** In applications where the electrode needs frequent cleaning, the electrode should be calibrated after each cleaning to ensure proper functionality*.

Why do some electrodes need frequent calibration while others need calibration every month?

If a process plant has a variety of processes within the facility, a calibration schedule needs to be determined for sensors placed in each type of process liquid.

- Clean applications, like drinking water, are rarely a problem for pH or ORP measurements and calibration is typically required every month.
- If the process solution contains high concentrations of chemicals, elevated temperature and/or pressure, or has many suspended solids, it is common to calibrate once every one or two weeks.
- For dirty process liquid applications, an electrode should be cleaned before calibrating.

What calibration solutions should be used?

pH calibration:

- Two pH buffer solutions should be used and need to be at least 3 pH units apart
- Use pH 7.00 and pH 4.01 solutions if the normal measurement value is less than 7 pH
- Use pH 10 and pH 7 if the normal measurement value is greater than 7 pH

ORP two point calibration:

- ORP calibrations are performed similar to pH calibrations using one or two solutions at different values.
- A pH 4 buffer solution saturated with quinhydrone will generate +264 mV while a pH 7 buffer saturated with quinhydrone will generate +87 mV.

Note: Quinhydrone solutions will last only for a short time (one hour or less). Also note that Signet EasyCal function only works with these two values.

* Sensors are good when a new electrode reads very close to the theoretical value (± 0.25 pH). A used pH electrode may read as far off as ± 0.84 pH before it needs to be replaced. If the pH readings in all buffers have shifted greater than 0.84 pH units (for example, electrode is reading 4.85 in a 4 buffer and 7.85 in a 7 buffer) or if the millivolt offset for pH/ORP sensors is extreme (outside of ± 50 mV in both pH/ORP solutions), a problem with the reference electrode is indicated and the electrode should be replaced.

Calibration Kits for Signet 4150 Turbidimeter

Calibration Kit, 100,
10 & 0.02 NTU/FNU

Calibration Kit, 1000,
10 & 0.02 NTU/FNU

The Calibration Standard kits contain fluids in special cuvette bottles that are used to compare the clarity of the process water against the standard to calibrate the turbidity instrument. The standard kits come in two pre-mixed, calibrated ranges.

The 0-100 version is generally used for measuring the turbidity of clean, potable water applications. The 0-1,000 version is used to measure water that has a turbidity which may exceed 100, such as water in a reclamation plant.

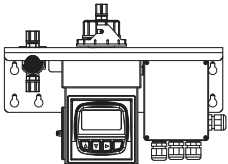

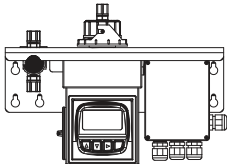

Features

- Stable pre-mixed standards that are certified accurate
- Sealed calibration cuvettes
- Shelf life - 12 months
- Easy to follow instructions
- Kits for easy use

Applications

- Potable Water Filtration
- Water Reclamation
- Food and Beverage Plants

Formazin Stock Kit for Signet 4150 Turbidimeter

The Formazin Stock Kit contains all chemicals and instructions to dilute/ mix calibration standards between 1.0 and 1980 NTU/FNU.

The Formazin Stock Kit can be used to calibrate third party turbidity instruments as well as the Signet 4150 Turbidimeter.

Features

- Turbidity standard for most any value
- Three different graduated pipettes included
- Four glass cuvettes with light shield caps
- Easy to follow instructions

Applications

- Potable Water Filtration
- Water Reclamation
- Food and Beverage Plants

Signet 2759 pH/ORP System Tester

The Signet 2759 pH/ORP Simulator is a battery-powered millivolt generator that simulates pH values of 4, 7 and 10, plus ORP values of ± 700 mV. This device is useful as a troubleshooting aid and for general verification of system operation. It is not a substitute for periodic system calibration with pH buffers or test solutions.

Accessory adapter cables (sold separately) enable the 2759 to connect directly to Signet 2760 preamplifiers, or 2751 pH/ORP Smart Sensor Electronics. The adapters include a selector switch for pH (3K or Pt1000 Temperature Compensation) or ORP simulation. The switch triggers automatic sensor-recognition software in Signet pH/ORP instrumentation.

Features

- Battery powered millivolt generator
- Simulates pH and ORP values
- High impedance input simulates preamplified signal
- Verifies system functionality
- Compatible with 2751 and 2760 preamplifiers
- Connects to all Signet instruments
- Verifies preamplifier or instrument electronics

System Overview	<p>Signet Instruments 8900 with 2751 Smart Sensor Electronics 9900 with 2751 Smart Sensor Electronics and Rear Enclosure 9950 with 2751 Smart Sensor Electronics</p>	<p>Automation System</p> <p>2751 Smart Sensor Electronics with 0486 Profibus Concentrator and Customer Supplied Programmable Logic Controller or Programmable Automation Controller</p>
	<p>Signet 2759.391 Bypass Adapter Cable</p>	
	<p>Signet 2759 Certification Tool</p>	

All sold separately

Features

A) Power OFF button

B) Output simulation buttons and indicators

Simulate pH and ORP output at fixed values: pH 4, pH 7, pH 10, -700 mV and +700 mV. Pressing any one of these buttons turns the 2759 on.

C) Low battery indicator

D) High Ω switch

Adds 1000 MΩ resistance in series with output. Simulates high impedance of pH electrodes. Used to verify proper preamplifier operation.

E) Adapter cable

Use PN 3-2759.391 for use with the 2751 or 2760.

F) Mode selector switch

Trigger automatic sensor recognition software in Signet pH/ORP instrumentation. The three-way toggle switch positions are:

- Top = 1K for a Signet 8900/9900/9950 instrument or 2751 Smart Sensor Electronics. Compatible with Pt1000 or 3KΩ temperature element.
- Middle = 10K for ORP simulation.
- Bottom = 3K for older Signet instruments. Requires a 3KΩ temperature compensation input.

* required for use with the 3-2759 to test and evaluate 3-2751 and 3-2760 preamplifiers

Signet Conductivity/Resistivity Tool

2850.101-X

The Signet Conductivity/Resistivity tool is available for certification or validation of electronics that are independent of the electrode. Because there are no available liquid standards for calibration in low conductivity and resistivity applications, the tool is ideal for various installations. The tool is built to conform to the ASTM D 1125-95 Standard (Standard Test Methods for Electrical Conductivity and Resistivity of Water), which is also commonly used for USP 24 applications.

The Signet Conductivity/Resistivity tool simulates within $\pm 0.1\%$ precision (accuracy), various values: 1.0 μS , 2.5 μS , 10.0 μS , 10.0 $\text{M}\Omega$, 18.2 $\text{M}\Omega$. The tool is also temperature compensated to 25 °C and enables the user to accurately validate or certify the electronics.

The 2850.101-X simulators are used with the Model 9900 and Model 2850 electronics by simply plugging into the same terminals as the sensor cables.

Features

- Available in five different values
- Compatible with 3-2850 electronics when used with the 8900 Multi-Parameter Controller, 9900 or 9950 Transmitter or as a stand-alone 4 to 20 mA output
- Verifies electronics independent of electrode
- NIST traceable units
- Temperature compensated to 25 °C
- All units ship with NIST traceable certificates

Signet 0252 Configuration Tool

The new 0252 Configuration Tool interfaces with Signet SmartPro® Transmitters and blind sensors, allowing fast and easy configuration using a PC. The configuration information can be saved to a file and stored on a PC to be used later on a replacement sensor or for another sensor in a similar application.

The saved configuration file can be downloaded to the sensor or the SmartPro Transmitters in mere seconds.

The save and load features allow you to back up all of your settings and transfer them to future devices. You can also e-mail the files to share with other users of the 0252 software.

The 0252 will graph and data log sensors in real time for trend and troubleshooting analysis. Export data logs in comma-separated value (CSV) format for review and reporting in many popular spreadsheet and database applications.

Support for new sensors and products is as simple as connecting to the Internet. The software will automatically download updates from the Internet to ensure you have the latest version of the application.

The software is supported in the following languages: Chinese, English, French, German, Italian, Portuguese and Spanish.

Features

- **Back up and restore SmartPro® Transmitters and blind sensors configurations to a computer file**
- **User-friendly interface**
- **Configure settings such as instrument type, units, scale 4 to 20 current loops and modify labels from the computer**
- **Use a single file to clone multiple SmartPro® Transmitters and blind sensors**
- **Red and blue LED indicators for power and data**

Compatibility

- **9900 Transmitter**
- **2250 Level Sensor**
- **2350 Temperature Sensor**
- **2450 Pressure Sensor**
- **2551 Magmeter Flow Sensor**
- **2552 Metal Magmeter Flow Sensor**
- **2751 pH/ORP Smart Sensor Electronics**
- **2610-51 Dissolved Oxygen**
- **Windows XP, 32-bit**
- **Windows Vista**
- **Windows 7 (32 and 64-bit versions)**
- **Windows 8 and Windows 8.1 (32 and 64-bit versions)**
- **Windows 10 (32 and 64-bit versions)**

Microsoft, Windows, and Windows Vista are registered trademarks of Microsoft Corporation in the United States and other countries.

Signet 7310 Switching Power Supplies

Signet 7310 Switching Power Supplies provide regulated output voltage in compact and lightweight plastic housings for DIN Rail mounting. The series includes five different output capacities from 0.42A to 4A (10W to 96W), all of which accept universal AC line voltage input and meet worldwide standards for performance and safety. These units meet the power requirements for a single system, multiple Signet instruments or other devices requiring 24 VDC operation.

Features

- Universal AC input/Full range
- Protections: Short circuit/Overload/Over voltage
- Cooling by free air convection
- Install on DIN rail TS-35/7.5 or 15
- NEC class 2 / LPS compliant
- Built in DC OK active signal
- LED indicator for power on
- No load power consumption < 1W for 7310-7024 and < 0.75W for others
- 100% full load burn-in test

Compatibility

- Signet Instruments
- Electromagnetic Flow Sensors
- Suitable for Electric Actuated Valves, including Solenoid
- Suitable for powering passive outputs and relays

Note

- All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25 °C of ambient temperature.
- Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.
- Tolerance : includes set up tolerance, line regulation and load regulation.
- The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives.
- Length of set up time is measured at cold first start. Turning ON/OFF the power supply may lead to increase of the set up time.

Signet i-Go® 8058 Signal Converter

3-8058-1

3-8058-1 wire mount

The Signet i-Go® 8058 Signal Converter accepts any 4 to 20 mA signal and converts it into the Signet digital (S³L) format, the serial data format used by the Signet 8900, 9900 and 9950 instruments and Profibus Concentrator. When used with the 8900 Multi-Parameter Controller, 9900 or 9950 Transmitter or the Profibus Concentrator, the measurement type and operating range are defined in the setup menu. When used with level, temperature and pressure ProcessPro transmitters, the 8058 is configured at the factory to the user's specifications.

The wire-mount single-channel version is easily mounted anywhere in the interconnecting wiring between the sensor and the instrument.

Features

- Connects with level, temperature, pressure and Multi-Parameter Signet instruments
- Single 4 to 20 mA sensor input
- Connects additional measurement parameters to Signet Multi-Parameter instruments
- In-line wire

Applications

- Dissolved Oxygen Monitoring and Control in Wastewater
- Chlorine Dioxide for Disinfection
- Specific Ion
- BOD
- TOC
- Alkalinity
- Ozone Monitoring
- Conductivity
- Chlorine Injection Control
- Tank Level Monitoring
- Turbidity and Suspended Solids Monitoring

Signet 8059 External Relay Modules

Signet 8059 External Relay Modules supplement the output capabilities of certain host instruments such as the Signet Multi-Parameter Controllers or Profibus Concentrator. AC-powered versions accept universal line voltage, and also provide 24 VDC output that can be used to power the host instrument or other device(s).

The host instrument controls relay operation by way of a single digital (S³L) connection. The compact plastic housing is DIN rail mountable and includes LED annunciators for each relay, plus one each for power-on and data transfer or test mode.

Features

- External relays controlled by host instrument
- AC and DC powered versions
- DC power output (AC versions)
- DC power pass-through (DC versions) to simplify wiring
- Digital (S³L) pass-through to simplify sensor wiring
- Red LED annunciators for each relay
- Green LED indicators for power and digital (S³L) data transfer
- Relay can be tested locally, and also via the host instrument

Specifications

Ordering Notes

- 1) Use an RC filter kit to protect relays from voltage spikes.
- 2) DIN railing and clips are available for mounting a relay module.
- 3) The -AC version will supply enough voltage to power the 8900 when using the 12-24 VDC power module.

Please refer to Wiring, Installation, and Accessories sections for more information.

721 312 023	315	300	10	Flow -X2	38	127

- For use with Flow: P51530-X1/-X2, 3-2536-X1/-X2, 3-8510-X1, 3-8512-X1, 3-2537-XC-X1, 3-2551-X1-XX
- Sensor length depends on installation fitting
- Threaded outlet 1 1/4 inch NPSM
- Top saddle for solvent cement bonding

Type 312, PVC-U Clamp-on Saddle, Metric (Available in EUROPE)

Code No.	d [mm]	DN [mm]	PN [bar]	Sensor Type - Flow, pH/ORP	H [mm]	L [mm]
198 150 538	75	65	16	Flow -X0, pH-XX	99	105
198 150 539	90	80	16	Flow -X0, pH-XX	105	105
198 150 540	110	100	16	Flow -X0, pH-XX	114	105
198 150 543	160	150	16	Flow -X1	157	120
198 150 545	225	200	16	Flow -X1	184	120

- For use with Flow: P51530-X0/-X1, 3-2536-X0/-X1, 3-8510-X0/-X1, 3-8512-X0/-X1, 3-2537-XC-X0/-X1, 3-2551-X0-XX/-X1-XX
- For use with pH/ORP: 3-272X-XX, 3-273X-XX
- Sensor length depends on installation fitting
- Threaded outlet 1 1/4 inch NPSM
- Top saddle for solvent cement bonding
- Seal: Lip seal of EPDM
- pH sensors can only be used up to 4 in. or DN100 pipe

Alternative solution can be a PP saddle or wafer. Pipe size, pressure rating and chemical resistance need to be evaluated.

Installation Fittings

Type 310, BSP PVC-U for Socket Fusion, BS Inch (Available in EUROPE)

- For use with Flow: P51530-X0, 3-2536-X0, 3-8510-X0, 3-8512-X0, 3-2537-X0, 3-2551-X0
- For use with pH/ORP: 3-272X-XX, 3-273X-XX
- Also available for PROGEF Natural Systems with union ends in PP-R and body in PP-H (Code No.: 728318106...) or with body in PVDF (Code No.: 728318006...)

- To install this installation fitting in PVC-C, PP-R and PE pipes; replace the original union ends with PVC-C, PP-R and PE union ends.
- Threaded outlet 1 1/4 inch NPSM
- Union end with butt fusion spigot PP-H

Type 314, PROGEF Standard, PP-H, Metric (Available in EUROPE)

Code No.	d [mm]	DN [mm]	Sensor Type - Flow, pH/ORP	D [mm]	L [mm]
727 314 000	75 - 180	65 - 150	Flow -X0, pH -XX	37.5	68
727 314 001	200 - 355	200 - 350	Flow -X1	37.5	102
727 314 002	400 - 630	350 - 600	Flow -X2	37.5	178

- For use with Flow: P51530-X0/-X1/-X2, 3-2536-X0/-X1/-X2, 3-8510-X0/-X1, 3-8512-X0/-X1, 3-2537-XC-X0/-X1, 3-2551-X0-XX/-X1-XX/-X2-XX
- For use with pH/ORP: 272X-XX, 3-273X-XX
- Threaded outlet 1 1/4 inch NPSM
- For conventional hot gas back welding according to DVS 2207 part 3

- Please consult the instruction manual
- Sensor length depends on installation fitting
- Your maximum allowable pressure may be determined by the pressure rating of the pipe material, quality of weld and/or installed sensor
- pH sensors can also be used for dimensions above d180/DN150 and below d75/DN65 with 727 314 000; the length might have to be adjusted

Installation Fittings

727 311 023	727 311 053	315	12	300	10	Flow -X2	329	285	48	185

- For use with Flow: P51530-X1/-X2, 3-2536-X1/-X2, 3-8510-X1, 3-8512-X1, 3-2537-XC-X1, 3-2551-X1-XX
- Threaded outlet 1 ¼ inch NPSM
- Suitable for backing flanges metric and inch
- Suitable for SDR 11 - SDR 17.6
- Delivered with profile O-ring
- Wafer can be used with other pipe materials
- Sensor length depends on installation fitting

Type 312, PP-H, Screw-on, Metric (Available in EUROPE)

- Stainless steel bolts
- Saddle can be used with other pipe materials

- Check H1 value vs. sensor length regarding minimum insertion depth.

Installation Fittings

Adapter socket, PP-H, ANSI - NPT (Available in EUROPE)

Code No.	d [mm]	NPT [in.]	PN [bar]	Sensor Type - Flow, pH/ORP, Conductivity, Temperature, Pressure	D [mm]	L [mm]	L1 [mm]	s [mm]	e [mm]
727 914 357	25	¾	10	2724-2726, 2774-2777, 2819-2842, 2350, 2450	25	51	23	36	2.3
727 914 358	32	1	10	2764-2767	32	54	23	46	2.9
727 914 359	40	1¼	10	2552-X1	40	56	23	55	3.7
727 914 360	50	1½	10	3719-11, 2540-1/-3, 2552-X3	50	60	23	65	4.6
727 914 361	63	2	10	3719-21	63	62	23	80	5.8

- "d" is for pipe dimension
- Connection via Butt or IR fusion
- Check L1 value vs. sensor length regarding minimum insertion depth.

Adapter socket, PP-H, Metric - Rp (Available in EUROPE)

Code No.	d [mm]	Rp [in.]	PN [bar]	Sensor Type - Flow, pH/ORP, Conductivity	L [mm]	L1 [mm]	s [mm]	e [mm]

733 310 011	733 310 041	63	50	Flow -X0, pH -XX	105	194	130	95	70

- For use with Flow: P51530-X0, 3-2536-X0, 3-8510-X0, 3-8512-X0, 3-2537-XC-X0, 3-2551-X0-XX,
- For use with pH/ORP: 3-272X-XX, 3-273X-XX
- Sensor length depends on installation fitting
- Threaded outlet 1 1/4 inch NPSM
- Union end with fusion socket PE80
- Body and union nut PP-H

Type 314, ecoFIT PE weldolet, Metric and Inch (Available in EUROPE)

Code No.	d [mm]	DN [mm]	Sensor Type - Flow, pH/ORP	D [mm]	L [mm]
753 314 000	75 - 180	65 - 150	Flow -X0, pH -XX	38	68
753 314 001	200 - 355	200 - 350	Flow -X1	38	102
753 314 002	400 - 630	350 - 600	Flow -X2	38	178

- For use with Flow: P51530-X0/-X1/-X2, 3-2536-X0/-X1/-X2, 3-8510-X0/-X1, 3-8512-X0/-X1, 3-2537-XC-X0/-X1, 3-2551-X0-XX/-X1-XX/-X2-XX,
- For use with pH/ORP: 3-272X-XX, 3-273X-XX
- Threaded outlet 1 1/4 inch NPSM
- Sensor length depends on installation fitting
- For conventional hot gas back welding according to DVS 2207 part 3
- Your maximum allowable pressure may be determined by the pressure rating of the pipe material, quality of weld and/or installed sensor
- pH sensors can also be used for dimensions above d180/DN150 and below d75/DN65 with 753 314 000; the length might have to be adjusted

Adapter Socket, ecoFIT PE100, SDR11 Metric - Rp (Available in EUROPE)

Code No.	d [mm]	Rp [in.]	PN [bar]	Sensor Type - Flow, pH/ORP, Conductivity	D [mm]	L [mm]	L1 [mm]	s [mm]	e [mm]
753 910 267	25	3/4	10	272X, 277X-ISO, 2839-1D - 2842-1D	25	51	23	36	2.3
753 910 269	40	1 1/4	10	2552-X2	40	57	23	55	3.7
753 910 270	50	1 1/2	10	3719-12, 2540-2/-4, 2552-X4	50	60	23	64	4.6

- Threaded outlet 1 1/4 inch NPSM
- Sensor length depends on installation fitting
- Connection via socket fusion
- Small "d" is for pipe diameter

Transition Adapter PE/brass (CW617N) ISO female thread, Metric (Available in EUROPE)

Code No.	d [mm]	PN [bar]	Rp [in.]	Sensor Type - Flow, pH/ORP	L [mm]	z
720 920 231	63	16	1 1/4	2552-X2	85	47
720 920 241	63	16	1 1/2	3719, 2540, 2552-X4	85	47

- 16 bar water
- For electrofusion saddle (193 131 XXX and 193 135 159)

PE Adapter ISO female thread, Metric (Available in EUROPE)

Code No.	d [mm]	PN [bar]	Rp [in.]	Sensor Type - Flow, pH/ORP	L [mm]
173 281 925	63	12.5	1 1/2	3719, 2540, 2552-X4	54

- Reinforcing ring stainless (A2)
- For electrofusion saddle (193 131 XXX and 193 135 159)

Installation Fittings

ELGEF Plus, Electrofusion Saddle, PE100, SDR 11 (Available in EUROPE)

Code No.	d [mm]	d1	L [mm]
193 131 037	63	63	165
193 131 047	75	63	165
193 131 057	90	63	165

193 131 147	280	63	165
193 131 157	315-355	63	165

- Connection with transition adapter PE/Brass or PE adapter

ELGEF Plus Branch Fitting (Available in EUROPE)

Code No.	d [mm]	d1 [mm]	H [mm]	L [mm]	L1 [mm]	B [mm]	d2 [mm]
193 135 159	500 - 630	90	102	260	82	263	65

- Can be used with reduction d90 - d63 (753 908 906)
- Connection via socket fusion with transition adapter PE/brass or PE adapter

Type 314, SYGEF Standard, PVDF, Metric/Inch (Available in EUROPE)

Code No.	d [mm]	DN [mm]	Sensor Type - Flow, pH/ORP	D [mm]	L [mm]
735 314 000	75 - 180	65 - 150	Flow -X0, pH -XX	37.5	68
735 314 001	200 - 355	200 - 350	Flow -X1	37.5	102
735 314 002	400 - 630	350 - 600	Flow -X2	37.5	178

- For use with Flow: P51530-X0/-X1/-X2, 3-2536-X0/-X1/-X2, 3-8510-X0/-X1, 3-8512-X0/-X1, 3-2537-XC-X0/-X1, 3-2551-X0-XX/-X1-XX/-X2-XX
- For use with pH/ORP: 3-272X-XX, 3-273X-XX
- Threaded outlet 1 1/4 inch NPSM
- Sensor length depends on installation fitting
- Please consult the instruction manual

- Installation only by trained and certified welder
- For conventional hot gas back welding according to DVS 2207 part 3
- Your maximum allowable pressure may be determined by the pressure rating of the pipe material, quality of weld and/or installed sensor
- pH sensors can also be used for dimensions above d180/DN150 and below d75/DN65 with 735 314 000; the length might have to be adjusted

735 318 040	50	40	16	Flow -X0, pH -XX	84	250	120	43	89	3.0
735 318 041	63	50	16	Flow -X0, pH -XX	101	266	130	43	95	3.0

- For use with Flow: P51530-X0, 3-2536-X0, 3-8510-X0, 3-8512-X0, 3-2537-XC-X0, 3-2551-X0-XX
- For use with pH/ORP: 3-272X-XX, 3-273X-XX
- Threaded outlet 1 1/4 inch NPSM
- Sensor length depends on installation fitting
- Union end with butt fusion spigot PVDF
- To install this installation fitting in PVC-C, PP-R and PE pipes; replace the original union ends with PVC-C, PP-R and PE union ends.

Type 310, SYGEF Standard, PVDF, Socket Fusion, Metric (Available in USA/ASIA/EUROPE)

Code No.	d [mm]	Sensor Type - Flow, pH/ORP	PN [bar]	D [mm]	H [mm]	L [mm]	L1 [mm]	z [mm]
735 310 036	20	Flow -X0, pH -XX	16	45	76	128	90	50

- Thread needs to be milled, handheld drilling must not be done

SYGEF Plus, PVDF HP Installation Fitting, PN10 (Available in EUROPE)

Code No.	d [mm]	DN [mm]	Rp/NPT [in.]	PN [bar]	FM	D [mm]	H [mm]	L [mm]	L1 [mm]	L2 [mm]	e [mm]
735 918 565	125	100	1/8 - 3/4	10	IR	162	157	100	40	27	3.9
735 918 566	140	125	1/8 - 3/4	10	IR	176	171	110	40	32	4.4
735 918 567	160	150	1/8 - 3/4	10	IR	194	190	110	40	32	4.9
735 918 569	200	200	1/8 - 3/4	10	IR	231	228	110	40	32	6.2
735 918 570	225	200	1/8 - 3/4	10	IR	254	251	110	40	32	7.0

- For all 1/8 to 3/4 inch threaded sensors
- Compatible with all Signet sensors (except flow sensors)
- Thread needs to be milled, handheld drilling must not be done

Type A

- Pre-insulated PE100 SDR11, metric
- Insulation made from GF HE foam
- Impact resistant. Color: black
- With threaded branch for sensors (i.e temperature, pressure)
- Electrofusion Fitting with integrated sealing lip, for a moisture-proof and vapor tight sealing

Type B

- Pre-insulated PE100 SDR11, metric
- Insulation made from GF HE foam
- Impact resistant. Color: black
- With threaded branch for sensors (i.e temperature, pressure)
- Spigot Fitting with free end (separate electrofusion fitting needed for joining)

Type 314, Stainless Steel, Metric (Available in EUROPE)

Code No.	d [mm]	DN [mm]	Sensor Type - Flow, pH/ORP	D [mm]	L [mm]
724 314 000	63 - 180	50 - 150	Flow -X0/ pH -XX	38	68
724 314 001	200 - 355	200 - 350	Flow -X1	38	102
724 314 002	400 - 630	350 - 600	Flow -X2	38	178

- For use with Flow: P51530-X0/-X1/-X2, 3-2536-X0/-X1/-X2, 3-8510-X0/-X1, 3-8512-X0/-X1, 3-2537-XC-X0/-X1, 3-2551-X0-XX/-X1-XX/-X2-XX
- For use with pH/ORP: 3-272X-XX, 3-273X-XX

- Threaded outlet 1 1/4 inch NPSM
- pH sensors can also be used for dimensions above d180/DN150 and below d63/DN50 with 724 314 000; the length might have to be adjusted

Installation Fittings

PV8S120	Not applicable	12 in. Glue-on Saddle, PVC

Ordering Notes

- If insert is intended for use with Signet installation fittings, specify fitting part number at the time of purchase.
- If insert is not for use with Signet installation fittings, specify the following at the time of purchase:
 - Outside diameter (o.d.) of pipe
 - Thickness of pipe
 - Dimension from top of pipe to top of installation fitting when installed.

Instrument Accessories - Junction Boxes

Mfr. Part No.	Code	Description	Compatible with	
	3-8050	159 000 184	The Universal Mount Kit mounts a 9900 field mount instrument onto a wall, pipe, or tank. Includes: transmitter base, universal mounting plate and bracket.	<ul style="list-style-type: none"> • 9900
	3-8050-1	159 000 753	The Universal Mount Junction Box contains two terminal blocks that enable cable extensions for pH, ORP, flow, temperature, pressure, and conductivity sensors/ electrodes. This kit mounts on a wall, pipe, or tank. Includes: top cover, transmitter base, universal mounting plate and bracket, liquid tight connector kit.	Sensors/Electrodes: <ul style="list-style-type: none"> • 2751-1 • 2751-3 • 2751-4 • 2839-2842 (-1, -1D versions) • 2350 • 2450 <div style="border: 1px solid black; border-radius: 10px; padding: 5px; display: inline-block;"> <p>! DO NOT extend resistivity electrode cable when resistivity value is above 10 MΩ</p> </div>
	3-8050-2	159 000 754	The pH/ORP Universal Mount Junction Box contains two terminal blocks that enable cable extension of pH or ORP sensors. It features an EasyCal board for simple, push-button pH or ORP calibration. This kit mounts on a wall, pipe, or tank. Includes: top cover, transmitter base, universal mounting plate and bracket, liquid tight connector kit.	ONLY <ul style="list-style-type: none"> • 2751-1 • 2751-3 • 2751-4

Installation of Chlorine

Sensor Installation - System Startup

All new chlorine and pH sensors require calibration during the start up of a system and also throughout the life of the sensor. A new chlorine sensor requires a 4 hour conditioning period with power on and water flowing past the sensor prior to calibration. See the 4630 manual for chlorine calibration and set up procedure.

If optional pH sensor is not being used, pH must be "hard-coded" into the system. Refer to 4630 manual for manual pH compensation. If optional pH sensor is installed, refer to 4630 manual to calibrate pH electrode.

1. Remove sensor access plugs from the flow cell. If the optional pH sensor is NOT used, do not remove the left-side plug from the flow cell.
2. Install sensor into the electronics (see 4630 manual). Chlorine sensor is installed in the right-side access port, optional pH sensor is installed in the left-side access port.
3. Remove the protective cap from the electrode tip and install the electrode into the flow cell. (Keep the electrode tip cap in a safe place for future use. It is recommend to use the cap to protect the sensor during the removal of the electrode for cleaning or maintenance of the flow cell.)
4. Repeat step 2 and 3 if the optional pH sensor is being used.
5. Install the influent water source to the "Inlet Port" nipple assembly of the flow cell. Install 3/8 in. tubing and secure with a hose clamp (customer supplied).
6. Install 3/8 in. tubing and secure with a hose clamp on the "Drain" port and direct the tube to a proper drain (customer supplied).
7. Verify the inlet and drain ball valves are in the open position and the sample port is in the off position.
8. Turn on the influent water source and check the system for leaks.

9. Apply power to the system, and allow system to initialize. Calibrate per instructions (See 4630 manual).
10. Calibrate system per instruction manual. For greater accuracy it is recommended that the initial calibration of the system is performed in the following order:
 1. Temperature
 2. pH electrode (if optional pH sensor is purchased. If manual pH sensor is selected enter the pH value into the option menu prior to calibrating the chlorine sensor)
 3. Chlorine sensor

Installation of Turbidity

Turbidity Installation

An owner's manual is included with every instrument that ships. Please refer to this manual for detailed instructions regarding installation and operation.

The instrument includes a mounting bracket, designed for the instrument to mount on a vertical surface. This was made simpler by having pre-drilled mounting holes on a pattern common with instruments used for this measurement. A pattern hole template is also included with the instrument for use when new mounting holes are required.

Plumbing

- Use 8 mm (5/16 in.) OD, 5 mm (3/16 in.) ID flexible tubing for the water supply connections.
- Opaque tubing (not supplied) should be used to prevent algae growth if the tubing will be exposed to sunlight.
- The 4150 requires only 1 psi head pressure to operate.
- The flow through cuvette is rated for a flow of 100 mL/m to 1 L/m (0.026 - 0.26 GPM).
- The integral pressure regulator is rated for a maximum pressure of 200 psi. It is factory adjusted. Do not tamper with the regulator.
- Inlet water pressure should not exceed 50 psi to avoid damage to the tubing connection to the regulator.
- Fluid temperature must not exceed 50 °C (122 °F).
- The shutoff clamp is used to interrupt the flow during cuvette maintenance.
- Route the sensor drain tubing to a suitable drain. Do not reintroduce the drain sample to the process stream.

Power

100 – 240 volts AC, 47 - 63 Hz required.

The output can be selected to be either a single programmable 4 – 20 mA output signal that is proportional to the turbidity level or RS 485 signal. Also provided are two programmable alarm relay outputs, who's function can be programmed as either a high or low turbidity level alarm, or set up as an error alarm to indicate an instrument malfunction, e.g. high humidity.

Calibration and Operation

Please refer to the owner's manual for details.

Installation of Flow Sensors: Paddlewheel

I. Piping Location

- The correct location of the sensor in the piping system helps to ensure a proper flow profile in the pipe. It is important to have sufficient straight pipe immediately upstream of the sensor to create “fully developed turbulent flow.” Such a flow profile provides the stability required for the paddlewheel to measure accurately.
- The diagrams below illustrate the minimum distances that are recommended to mount plastic and metal paddlewheel sensors.
- In all scenarios, it is recommended to choose a location with as much straight, uninterrupted pipe length upstream of the sensor as possible. Always use synthetic grease on O-rings.

II. Mounting Angle

Paddlewheel sensors are affected by the mounting angle due to the effect of gravity increasing the friction between rotor and bearing surfaces. Air entrapment and sediments within the pipe may also adversely affect sensing accuracy and/or impede operation.

Paddlewheels in Vertical Pipes

- Mount the sensor in a pipe with an upward flow. This position is recommended for all scenarios, as it ensures a full pipe.
- Vertical installations with downward flow are not recommended.

Paddlewheels in Horizontal Pipes

- Recommended sensor mounting angle is $\pm 45^\circ$ from vertical to avoid air bubbles (pipe must be full). With the sensor at greater angles, the drag created by the rotor resting against the sensor body may compromise performance at the lower end of the operating range.
- Straight up installations may experience interference from entrained air at the top of the pipe.
- Inverted installations are often subject to blockage due to sediments in the pipe. Mounting sensors in the bottom of the pipe is NOT recommended if sediments are likely to be in the pipe.

K-Factors

K-Factors are calibration values (pulses per unit of volume) used to convert flow sensor output frequencies to flow rates. Signet publishes K-Factors for water only in gallons (pulses per gallon) and liters (pulses per liter) for all sensors, in all applicable pipe sizes and materials, and/or all applicable installation fitting sizes and materials. K-Factors for fluids other than water must be determined empirically, typically on-site using a secondary standard.

NOTE: For other pipe sizes, statistical K-Factors may be available from on-line K-Factor tool. Or contact technical support for more information.

Installation of Flow Sensors: Paddlewheel

III. Installation Fittings

515, 2536 and 2537 Rotor-X

- This section outlines the installation fittings available from Signet for the 515, 2536 and 2537 Rotor-X family of flow sensors. The fitting controls the location of the paddlewheel inside the pipe,

which in turn determines the calibration constant (K-Factor).

- Refer to the Fittings section of this catalog for a complete listing of part numbers.

Type	Description
 <p>Plastic Tees</p>	<ul style="list-style-type: none"> 0.5 to 2 in. versions PVC or CPVC Available with or without pipe extensions
 <p>PVC Glue-on Saddles</p>	<ul style="list-style-type: none"> Available in 10 and 12 in. sizes only Cut 2-1/2 in. hole in pipe Weld in place using solvent cement

 <p>Carbon Steel & Stainless Steel Weld-on Weldolets</p>	<ul style="list-style-type: none"> 2 to 4 in., cut 1-7/16 in. hole in pipe Over 4 in., cut 2-1/8 in. hole in pipe 1.5 in. to 8 in. PVDF insert >8 in. PVC insert
 <p>Fiberglass Tees</p>	<ul style="list-style-type: none"> 1.5 in. to 2 in. PVDF insert
 <p>Metric Union Fitting</p>	<ul style="list-style-type: none"> For pipes from DN15 to 50 mm PP or PVDF Socket fusion equipment required

525 Metalex

- This section outlines the installation fittings available from Signet for the 525 Metalex family of flow sensors. The fitting controls the location of the paddlewheel inside the pipe, which in turn determines the calibration constant (K-Factor).
- Refer to the Fittings section of this catalog for a complete listing of part numbers.

525-1 Metalex Flow Sensor

The smallest Metalex Flow Sensor (525-1) must be installed into a specially constructed tee fitting with socket-weld piping connections.

Wetted fitting materials:
316 SS (1.4401)

525-2 Metalex Flow Sensor

Use the 525-2 and one of these weld-on fittings for stainless steel pipes from DN32 (1 1/4 inches) up to DN300 (12 inches) in diameter.

Wetted fitting materials:
316 SS (1.4401) & 347 SS

Wetted fitting materials:
Ductile Iron, 347 SS,
Carbon steel,
Buna-N/Neoprene

Consult a qualified welder to install Metalex fittings. Use of saddle fittings reduces the pressure rating for the 525 sensor.

Fixed Depth

The insertion depth of a paddlewheel in a flow stream is critical and must be achieved and maintained to ensure accurate flow measurements. Signet installation fittings for Rotor-X and Metalex paddlewheel flow sensors set this depth automatically and facilitate the use of convenient K-Factors (calibration values) published in individual sensor instruction manuals.

The H-dimension controls the insertion depth and they are critical for proper seating of the flow sensor into the pipe. These dimensions can be found listed in the flow sensor instruction manuals.

Installation of Flow Sensors: Paddlewheel

IV. Rotor Replacement

Procedure for Plastic Paddlewheel Sensors

1. To remove the rotor, insert a small screwdriver between the rotor and the ear of the sensor.
2. Twist the screwdriver blade to flex the ear outward enough to remove one end of the rotor and pin.

NOTE:

Do not flex the ear more than required to remove the pin. If it cracks, it cannot be repaired!

3. Install the new rotor by inserting one tip of the pin into the hole, then flex the opposite ear back enough to slip rotor into place.

Procedure for Metal Paddlewheel Sensors

1. With a small pair of needle-nose pliers, firmly grip the centre of the rotor pin (axle) and with a twisting motion, bend the rotor pin into an "S" shape. This should pull the ends of the pin out of the retainers and free the rotor assembly.
2. Remove rotor pin retainer from each side by gently tapping it inwards using a punch. Install a new retainer into the sensor body with its rotor pin clearance hole inward. Only install one retainer at this time.
3. Insert the new rotor assembly and bearings into the rotor housing of the sensor and place the new rotor pin (axle) through the open end of the rotor housing, through the rotor and bearings, and into the previously installed retainer.
4. Using a vise or C-clamp, press the second retainer into the hole in the sensor body while lining up the rotor pin with the centre of the retainer hole.

Note: A hammer and center punch can also be used if a clamp or vice is not available.

Installation of Flow Sensors: Paddlewheel

V. Cable Glands and Conduit Adapter Kits

Cable glands and conduit adapter kits are available to install on models 515, 2536, and 525 when used in wet environments. These items protect against moisture entering the back end of the sensor. Follow these simple instructions to prolong the life of the sensor. Conduit adapters are included with the 2540 sensors.

- 1) Remove the black nylon bushing to expose the female threads at the back end of the flow sensor. Use a standard medium size screwdriver to pry the bushing up and out of the port. Slide it up and off the entire length of the cable, or cut it away carefully so as not to nick the cable jacket.

- 2) Thread the gland or conduit adapter over the cable and screw the 1/2 in. NPT male threads into the top of the sensor in place of the bushing.

- 3) For liquid-tight glands, tighten the compression fitting onto the fitting sufficiently to achieve a seal around the cable.

Cable Gland 3-9000.392-1
(Liquid Tight Connector)

- 4) For conduit adapters, thread the cable through the adapter and tighten the adapter into the sensor fitting.

Conduit Adapters P51589
(suitable for all plastic and metal Paddlewheel Sensors)

Flow Installation Tips

- Use Signet fittings for proper insertion into the process flow.
- Recommended upstream distances are stated as a multiplier of the I.D. (inner diameter) dimension of the pipe. Note that these multipliers are different for each example and depend upon the upstream obstruction.
- Paddlewheel sensors can be used for all water-like fluids with little or no particulates (<100 micron in diameter/length), and non-ferrous, non-fouling in nature.
- Always use these sensors in full pipes.
- Always maximize the distance between sensors and pump sources.
- Ensure that all wetted materials are chemically compatible with the process liquid.
- Pressure and temperature ratings are reduced when plastic flow sensors are mounted in metal piping systems.
- The flow sensor is designed to fit tightly into the fittings. Lubricate O-rings with a non-petroleum based, viscous lubricant (grease) compatible with the system.
- Cut the cable to the desired length if too long. Do not coil extra cable.

Installation of Flow Sensors: Wet-Tap and Hot-Tap

VI. Wet-Tap and Hot-Tap Installation

3519 Wet-Tap valve with a 515 Paddlewheel Sensor

3519 Wet-Tap Valve

- The 3519 Wet-Tap consists of a flange and support plate that threads onto the pipe fitting insert, and a PVC ball valve through which an extended length, wet-tap style sensor is inserted into the pipe.
- No special tools are required to install the 3519.
- The Signet 3519 Wet-Tap Valve mounts directly onto standard Signet installation fittings for the 515 and 2536 flow sensors. The Wet-Tap sensors are identified in their part number as -P3, -P4 and -P5, depending on the pipe size.
- The 3519 Wet-Tap valve can only be installed in an empty pipe. Once installed, the sensor can be removed and re-inserted while the process is active.
- Pressure must be reduced prior to insertion and removal of sensor (please see individual product page for more information).

2540 and 2552 Hot-Tap

- The Signet 2540 and 2552 Metal High Performance flow sensors accommodate hot-tap installations. One sensor can be installed in various pipe sizes.
- The valve for Hot-Tap sensors can be installed while the pipe is full if a hot-tap drill is used.
- To install a Hot-tap sensor, you will need a hot-tap drilling machine, a metal ball or gate valve, a metal pipe nipple with 1½ inch threads and the Signet Hot-Tap installation tool (2540 only). Consult with your piping supplier for information regarding drills.
- The necessary metal valve and pipe nipple are not available from Signet. You can purchase these standard hardware items from a local supplier.
- Hot-Tap sensors can be installed and removed without process shutdown.
- Care must be taken while removing sensor under process conditions.
- The installation tool serves to hold the sensor against the line pressure as it is retracted or inserted into the pipe (2540 only).
- The Hot-Tap installation fitting has a bleed valve to relieve the pressure when retracting the sensor (2540 only).

Installation of Flow Sensors: In-Line Rotors and Turbines

I. Piping Location

- The location of the sensor in the piping system determines the flow profile that the sensor is monitoring. The ideal location is to have sufficient straight pipe immediately upstream of the sensor to create "fully developed turbulent flow." Such a flow profile provides the stability required for the paddlewheel to measure accurately.
- The diagrams below illustrate the minimum distances recommended from various obstructions.
- In all scenarios, it is recommended to choose a location with the maximum length of straight, uninterrupted pipe.
- Six common installation configurations are shown

below as guidelines to help you select the best location in your piping system for the flow sensor. Always maximize distance between sensors and pump sources.

- Never install immediately downstream of valves, fittings, etc.
- Observe minimum Reynolds Number (see Technical Reference section).
- The flow sensors are not for bi-directional operation.

- For optimal performance of the 2507, a straight flow run of at least 100 to 150 mm (4 to 6 in.) should be allowed before and after the sensor.

2507 Mini-Flow Sensor

II. Mounting Angle

The mounting angle of the sensor may affect the performance of the system.

In-line Rotors:

- Signet Models 2507 and 2000 flow sensors are designed to be mounted on a flat surface, although the sensors may be tilted up to $\pm 30^\circ$ if necessary.
- Installation in excess of 30° will affect the accuracy of the sensor.
- For Model 2507, two pipe fitting adapters (included) convert the straight threads G- $\frac{1}{4}$ in. to $\frac{1}{4}$ in. NPT.
- These sensors should be installed securely to their supporting surface to prevent vibrations from affecting the performance.

2507 In-Line Rotor

2000 Micro Flow Sensor

Turbine Flow Sensors

- All mounting angles are acceptable for these sensors if the basic parameters are met: the pipe must be full with no entrapped air.
- Install the sensor with the arrow pointing in the direction of the flow of liquid.

2100 Turbine Flow Sensor

Installation of Flow Sensors: Magnetic

Magnetic Flow Sensors

- All mounting angles are acceptable for these sensors if the basic parameters are met: the pipe must be full with no entrapped air.
- On horizontal pipe runs, sensor may be mounted in any position around the pipe. If air bubbles or sediments are expected, mount at a slight angle.
- On vertical pipe runs, sensor may be mounted in any orientation with UPWARD flow preferred to ensure a full pipe.

12 o'clock and 6 o'clock position not recommended

Vertical flow is OK IF the pipe remains full at all times.

Installation of pH/ORP Electrodes

I. Submersible Installation

2724-2726/2734-2736/2764-2767/2774-2777 with 2751/2760 preamplifier

Sensors are designed to install in tanks by attaching conduit to the 3/4 in. threads at the top of the accompanying preamplifier or sensor electrodes. Installing a sensor can simply be done by following these steps:

- 1) The O-ring at the top of the electrode fits very tightly into the preamplifier. Use a small amount of lubricant (non-petroleum based) to assist the assembly.
- 2) To prevent moisture from migrating into the preamplifier, backfill the conduit with 3 to 4 inches of sealant.
- 3) Mount electrodes in a location with ample clearance to remove them for periodic cleaning and recalibration.
- 4) Choose a location that keeps the electrode glass completely submerged at all times.

Installation Tips

- Mount the electrode near tank outlet away from reagent addition areas.
- Place the electrode tip in pH 4 buffer during system maintenance or storage to avoid dehydration.
- Sensor should be below the drain level to prevent the sensor from drying out.

Caution: If liquid level is not constant, always ensure liquid contact with electrode tip

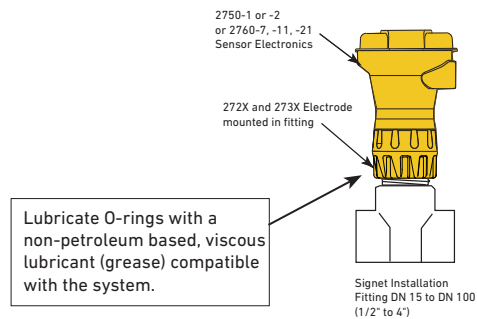

Installation of pH/ORP Electrodes

2724-2726/2734-2736/2764-2767/2774-2777 pH/ORP Electrodes with 2751 or 2760 Preamplifier

- These sensors feature a thread close to the sensor end which allows the sensor to thread directly into a standard NPT pipe tee.
- Electrodes must be immersed in liquid. Keep pipe full at all times to avoid dehydration.
- Observe mounting angle requirements for models 2764-2767.
- Any mounting angle is acceptable for Models 2724-2726, 2734-2736 and 2774-2777.

In-line Installation

II. Installation Fittings Compatible with Models 2724-2726, 2734-2736 pH/ORP Electrodes

See Fittings Section for more information

Type	Description
<p>Plastic Tees</p>	<ul style="list-style-type: none"> • Available in ½ in. to 4 in. sizes • PVC, CPVC w/solvent cement socket • PVDF and PP w/union end fittings
<p>PVC Saddles</p>	<ul style="list-style-type: none"> • Available in 2 in. to 4 in. sizes • Requires 1-7/16 in. hole in pipe
<p>Iron Strap-on Saddles</p>	<ul style="list-style-type: none"> • Available in 2 in. to 4 in. sizes • Requires 1-7/16 in. hole in pipe

Type	Description
<p>Carbon Steel Weldolets</p>	<ul style="list-style-type: none"> • Available in 2 in. to 4 in. sizes • Requires 1-7/16 in. hole in pipe • Install by certified welder only
<p>Carbon steel Threaded Tees</p>	<ul style="list-style-type: none"> • Available in ½ in. to 2 in. sizes • Female NPT ends
<p>Universal Pipe Adapters</p>	<ul style="list-style-type: none"> • Use for installation in pipes > 4 in. (1-¼ in. NPT) • PVC, CPVC, or PVDF versions • Specify socket or 1-¼ in. NPT male threads (socket version shown here)

Installation Tips

- Use pipe adapters to install electrodes into pipe sizes larger than DN100 (4 in.)
- Adapters are designed to either glue into a plain socket tee (specify socket) or thread into a 1 ¼ in. threaded tee (specify threaded).

Installation of pH/ORP Electrodes

IV. Mounting Angle

Sensor Mounting - Models 2764-2767

- pH electrodes must be mounted at least 15° from the horizontal to ensure proper sensing. Sensors mounted at less than 15° will impede performance.
- ORP electrodes may be mounted at any angle without affecting the performance.

Sensor Mounting - Models 2724-2726, 2734-2736, 2774-2777

- Models 2724-2726, 2734-2736 and 2774-2777 may be mounted at any angle without affecting the performance.
- Avoid the 12 o'clock position.
- In the presence of sediment, avoid the 6 o'clock position.

Installation of pH/ORP Electrodes

V. 3719 Wet-Tap Overview

- a) 3719 pH/ORP Wet-Tap
- b) Low Profile PP Clamp-on Saddle Fitting (customer supplied)
- c) 275X-WT and 275X-WTP DryLoc® pH or ORP Electrode (“DryLoc” refers to the electrode connector style)
- d) 2751/2760-11 DryLoc® pH/ORP Sensor with J-Box
- e) Output signal options:
 - digital (S³L)
 - 4 to 20 mA

All of these components are sold separately.

Lubricate O-rings with a non-petroleum based, viscous lubricant (grease) compatible with the system.

3719 pH/ORP Wet-Tap Installation

- Initial installation must be performed under non-pressurized conditions.
- The 3719-11 has a 1½ in. NPT process connection for use with accessory saddle fittings from 2½ to 4 in.
- The 3719-21 has a 2 in. NPT process connection for use with accessory saddle fittings from 6 to 12 in.
- It is possible to install the 3719 into pipe sizes below 2½ inches by creating a “flow cell” with standard piping components.
- One simple solution, using a GF SCH 80 PVC tee and reducer bushings, is illustrated below.
- Avoid the entrapment of air inside the flow cell.
- Model 3719-12 has an ISO 7/1-R1.5 process connection to fit pipe sizes DN65 to DN100. Installation fittings are customer supplied.
- Model 3719-22 has an ISO 7/1-R2 process connection to fit pipe sizes DN150 to DN300. Installation fittings are customer supplied.

For installation into pipe sizes below 2½ in., insertion depth of electrode requires use of 2½ in. fitting with reducers.

Installation Tips

- Provide 0.5 m (20 in.) minimum clearance from the top of the pipe for electrode removal.
- The 3719 can be mounted in any orientation, including horizontal and inverted.
- Use caution when removing inverted sensors. Residual fluid may be present in the retraction housing.
- Keep electrode connector clean and dry at all times.
- For reliable in-line measurements of pH and ORP, it is imperative to position the electrode tip into the process stream.
- Because of its compact “short stroke” design, the 3719 requires low-profile fittings to assure proper positioning in pipe sizes DN65 to DN300 (2½ to 12 in.)
- It is strongly recommended to use the low profile PP clamp-on saddle fittings.

Installation of pH/ORP Electrodes

VI. 3719 pH Wet-Tap Electrode Installation

The 3719 can be mounted in any orientation, including horizontal and inverted (shown here with both 2760-11 preamplifier and 2751-1 or -2 Sensor Electronics).

1. Slide electrode (DryLoc®) straight down into electrode piston. Thread electrode into place until connector shoulder is flush with top of electrode piston. Hand tighten only.
2. Place the Locking Shroud over electrode; turn 1/4-turn clockwise to unlock the piston, then press down firmly on the Locking Shroud to lower the electrode piston into the pipe.
3. Turn the Locking Shroud 1/4-turn counterclockwise to lock the piston.
4. Install the 2751 or 2760 DryLoc pH/ORP Sensor electronics onto the electrode connector (see individual operation manuals for more detail).

VII. 3719 Wet-Tap Mounting Angle

- The 3719 can be mounted in any orientation, including horizontal and inverted.
- Avoid the 12 o'clock position.
- In the presence of sediment, avoid the 6 o'clock position.

Installation of Conductivity/Resistivity Electrodes

I. Submersible Installation

2819 to 2823/2839-1 to 2842-1 with 2850 Sensor Electronics

- Electrode with 2850 Sensor Electronics shown below.
- All mounting brackets, electrical conduits, and pipe extensions are customer supplied.
- Sensor Models 2819-2823 are mounted similarly, except use a 3/4 in. MNPT Thread to mount to a 3/4 in. FNPT pipe thread (customer supplied).

Use a 9900 and proper accessories to allow a local display.

Installation Tips

- In aerated vessels install the electrode in a stilling well to prevent air from being trapped inside the electrode.

II. In-Line Installation

- Conductivity/Resistivity electrodes can be installed into standard 3/4 in. NPT fittings or ISO 7/1-R 3/4 threaded fittings.
- The preferred installation for in-line applications directs flow straight into the electrode. This configuration reduces the probability of entrapped air bubbles, and provides the best continuous sampling of the fluid content.
- If the electrode is mounted vertically in a tee, do not recess the orifices inside the tee. Mounting upside down may help prevent air entrapment.
- At least 4 threads (ANSI B1.20.1) must be engaged to meet pressure rating per published specifications.

Tri-clamp Connections

- Models 2819-2821 are offered with 1 to 1 1/2 in. and 2 in. sanitary fittings.

Installation of Temperature Sensors

I. Submersible Installation

- Use the 2350 sensor with 4.6 m (15 ft) cable.
- Mount the sensor to an extension pipe or watertight conduit using thread sealant.
- Use a cable gland at the top of the extension to prevent moisture intrusion/accumulation inside the pipe.

- For additional defense against possible accumulation of condensation at the back seal area of the sensor, fill the lower 75-100 mm (3-4 in.) of conduit or extension pipe with a flexible sealant such as silicone.

Installation Tips

- 8050-1 and 8052-1 junction boxes can be useful for this installation option.

II. In-Line Installation

- The 2350 can be mounted in a pipe-tee using the threads closest to the sensing end.
- The sensor can be mounted with or without an integral kit. This kit mounts a junction box to an instrument.

- See below for more information on instrument integral mount and junction box/remote mount examples.

Integral Assembly

- The 3-8052 Integral Kit connects the 9900 Transmitter directly onto the 2350 sensor.
- Apply sealant or PTFE tape to the process connection threads, after inspecting threads to ensure integrity. Do not install a sensor with damaged threads.
- Tighten the sensor 1½ turns past finger tight into the process connection.

Remote Assembly

- The optional 3-8052-1 Integral Junction Box with ¾ in. process connection offers a convenient terminal point to extend the 2350 cable over a distance.

The kit includes:

- ¾ in. NPT process connection
- Conduit base and cap with junction terminals
- 3-9000.392-1 liquid tight connector, ½ in. NPT
- Apply sealant or PTFE tape to the process connection threads, after inspecting threads to ensure integrity. Do not install a sensor with damaged threads.
- Tighten the sensor 1½ turns past finger tight into the process connection.

Installation Tips

- Sensors can be mounted into any DN20 (¾ in.) FNPT pipe tee (customer supplied)

Installation of Pressure/Hydrostatic Level Sensors

I. Submersible Installation

- Use the 2450 and 2250 sensors with 4.6 m (15 ft) cable and 10 m (32.8 ft).
- Mount the sensor to an extension pipe or watertight conduit using thread sealant.
- Use a cable gland at the top of the extension to prevent moisture accumulation inside the pipe.
- For 2450 sensors: DO NOT hermetically seal (i.e. applying silicone sealant or epoxy) the back of sensor. This may introduce measurement errors resulting from changes in atmospheric pressure and/or temperature. Instead, use a 2250 which has an extended atmospheric breather tube (same length of sensor cable). Do not to pinch breather tube.

The Signet 2450 Pressure Sensor with union connection or 3/4 in. NPT can be mounted side-tank. (Side mount not recommended)

Signet 2450 Pressure Sensor

Signet 2250 Hydrostatic Level Sensor

II. In-Line Installation

- The 2450 can be mounted in a pipe-tee using the threads closest to the sensing end.
- The sensor can be mounted with or without an integral mount kit. This kit mounts a junction box or an instrument.
- See below for more information on instrument integral mount and junction box/remote mount examples.

Installation Tips

- 8050-1 and 8050-2 junction boxes can be useful for this installation option.

Integral Assembly

The 3-8052 Integral Kit connects the 9900 Transmitter directly onto the 2450 sensors.

- Use the 2450 sensor with 15.2 cm (6 in.) cable and digital (S³L) output.
- Apply sealant or PTFE tape to the process connection threads, after inspecting threads to ensure integrity. Do not install a sensor with damaged threads.
- Tighten the sensor 1 1/2 turns past finger tight into the process connection.

Installation Tips

- Sensors can be mounted into any DN20 (3/4 in) FNPT pipe tee (customer supplied)

Remote Assembly

The optional 3-8052-1 Integral Kit with Junction Box and 3/4 in. NPT sensor connection provides a convenient terminal point to extend the 2450 and 2250 cable over a distance.

The kit includes:

- 3/4 in. NPT sensor connection
- Conduit base and cap with junction terminals
- 3-9000.392-1 liquid tight connector, 1/2 in. NPT

Installation of Pressure/Hydrostatic Level Sensors

The in-line 2450 pressure sensor with union connection can be mounted using GF parts. See below for list of GF Part Numbers.

Union Matrix for Pressure Sensor 3-2450 ½ in. (DN15) Union Connection

Wiring Information: 4630 Chlorine Analyzer System

I. 4630 Chlorine Analyzer System

1. Mount the panel on a vertical flat surface using appropriate hardware.

! DO NOT turn on power at this time.

2. Open the wiring enclosure and wire input power. The panel system is pre-wired with an auto switching power supply that is rated for 100 to 240 VAC 50/60 Hz input. Wire with NEC Class I, 300 volt, 105 C wire. A switch or circuit breaker rated at 15 amps AC shall be included in the building installation. Install the circuit breaker in close proximity to the equipment and within easy reach of the operator. Mark the circuit breaker as the disconnecting device for the equipment.

3. **100 to 240 VAC Input Wiring:** Insert input power wiring into the cable gland on the left side of the electrical box.
4. **12 to 24 VDC Input Wiring Conversion:** Disconnect the red and black output wires from the power supply (Figure 1) and connect your DC power source to them (Figure 2).
5. Install the input power wires into the proper terminals on the power supply (Figure 3). Use only 12-26 AWG copper wiring.
6. Recommended torque for the terminals is 7 lb-in. (See 4630 Manual for more detailed instructions).
7. Wire any 4 to 20 mA and relay output.

Figure 1

PLC dual channel connection

Wiring Information: Turbidity

I. 4150 Turbidimeter

Power

- Install a circuit breaker in the AC line before the 4150 power connection to allow for service.
- The 4150 is not supplied with a power cord.
- The power cable bulkhead will accept cable diameters from 5.8 mm (0.230 in.) up to 10 mm (0.395 in.).

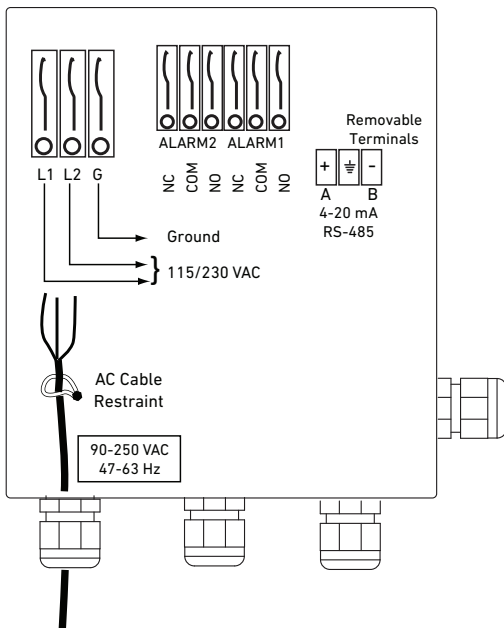

- All terminals are designed to accept wires in the range of 14-28 AWG.
- All wires should be stripped to a length of 6 mm (¼ in.).
- A strain relief strap is provided to reduce tension on the AC power terminals.

RS485

- The RS485 half-duplex (2-wire) digital interface operates with differential levels that are not susceptible to electrical interferences.
- The last device on each bus may require terminating with a 120-ohm resistor to eliminate signal reflection on the line.
- Do not run RS485 cables in the same conduit as power.

4 to 20 mA

- The active 4 to 20 mA output is driven by a 15 VDC power source and can drive external loads up to 600 ohms.
- Do not run 4 to 20 mA cables in the same conduit as power.

Wiring Information: Sensors

II. Flow sensor cable details and connection to instrumentation

- Most Signet Flow sensors are supplied with a standard 7.6 m (25 ft) length of cable except the 2100 Turbine, which has 4.6 m (15 ft).
- 2551 Magmeters are not supplied with cable.
- 2552 Magmeters supplied with 7.6 m (25 ft) or submersible version with optional 3.9 m (13 ft) or 5.9 m (19.5 ft).
- Sensors with AC sine wave outputs (515, 525) may extend cable to a maximum 60 m (200 ft)
- Sensors with open collector outputs (2000, 2100, 2507, 2536, 2537, 2540, 2551, 2552) may extend cable to a maximum 300 m (1000 ft)
- Maintain all cable shielding through splices or terminal connections.
- Cable should be 2 conductor twisted pair with shield, 18 to 22 AWG.
- Signet Flow sensors use cable with Black, Red and Shield conductors. To facilitate wiring, most Signet instruments have wiring terminals that are labeled with these same colors.

 Instrument Marking	Sine Wave Output	Sensor Wire Color	 Open Collector Output	Instrument Marking
Freq. In Black	Frequency	Black	DC Power +	Sensor Pwr Sensor V+
Freq. In Red	Frequency	Red	Signal Out	Freq. In Sensor In
Iso. Gnd Shld	Ground	Shield (White)	DC Power -	Iso. Gnd Sensor Gnd
	515 525	Sensor models	2000 2100 2507 2536 2537 2540 2551 2552	

Wiring Information: Sensors

II. Flow sensor wiring details for 2537 Flowmeter

Digital (S³L) Wiring

The digital (S³L) output is compatible with the Signet 8900, 9900 and 9950.

Loop Wiring

The 4 to 20 mA output can be connected to Chart Recorders, PLCs or any device that requires a 4 to 20 mA signal.

Dry Contact Relay Wiring

The wiring is identical for On-OFF and Pulse modes.

Solid State Relay Wiring

The wiring is identical for On-OFF and Pulse modes.

Wiring Information: Sensors

II. Flow sensor wiring details for 2551 Magmeter

Loop Wiring:

The 2551-XX-12 Magmeter is a traditional 2-wire passive 4 to 20 mA loop transmitter. External loop power (24 VDC \pm 10% regulated) is required.

⚠ The maximum loop resistance the Magmeter can accommodate is 300 Ω .

All 2551-XX-12 Magmeters are shipped from the factory with the 4 to 20 mA output scaled for 0 to 5 m/s (0 to 16.4 ft/s). If this operating range is suitable, no adjustments are necessary.

The 3-0252 Configuration Tool is required to change the operating range.

Frequency Wiring:

- When the blue jumper illustrated here is placed over both pins, the 2551-XX-11 outputs an open collector frequency signal that can be connected to any powered Signet flow meter. (Models 8900, 9900, 9900-1BC, 9950).
- 5 VDC power is provided to the 2551 Magmeter by all Signet flow instruments. No additional power is required.
- If connecting the 2551 Magmeter to a flow instrument from another manufacturer, 5 to 24 VDC \pm 10% regulated power must be provided to the 2551. A 10 K Ω pull up resistor must also be connected between terminals 1 and 2.
- The frequency output will be displayed as positive flow regardless of the flow direction.

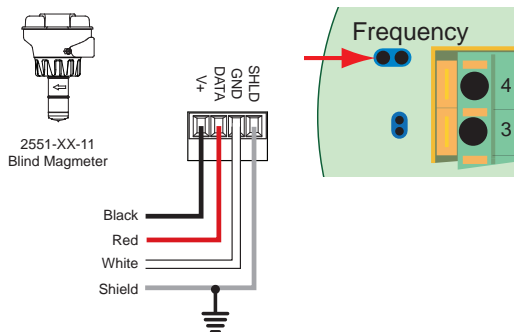

Blue Jumper ON = FREQ OUT

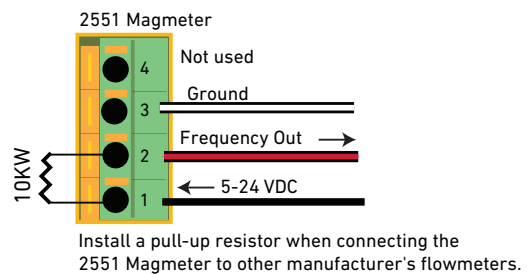

2551 Frequency Out to Signet 8900

2551 Frequency Out to Signet 9900

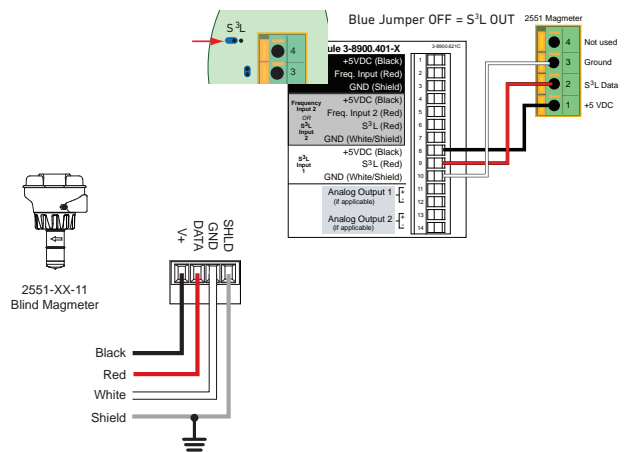

2551 Frequency Out to Other Manufacturer's Equipment

Digital (S³L) Wiring:

- When the blue jumper illustrated here is removed (or placed over one pin for storage) the 2551-XX-11 outputs a digital (S³L) signal compatible with the Signet 8900, 9900 or 9950.
- The 2551 receives 5 VDC power from the 8900 or 9900. No additional power is required.
- The 8900 or 9900 will display 0 (Zero) flow rate during periods of reverse flow.
- The maximum cable length from the 2551 to the 8900, 9900 or 9950 depends on the 8900, 9900 or 9950 configuration. Refer to the 8900, 9900 or 9950 manual for complete information.

Wiring Information: Sensors

II. Flow sensor wiring details for 2552 Magmeter

Frequency Wiring:

- The 2552 outputs an open collector frequency signal that can be connected to any powered Signet flow meter. (Models 8900, 9900, 9900-1BC, 9950)
- DC power is provided to the 2552 Magmeter by all Signet flow instruments. No additional power is required.
- If connecting the 2552 Magmeter to a flow instrument from another manufacturer, 5 to 24 VDC power must be provided to the 2552. A 10 K Ω pull up resistor must also be connected between the +V (Black) and the Freq. Out (Red) wires.

2552 Metal Magmeter

8900 Frequency Wiring

Non-Signet Instrument

Digital (S³L) Wiring:

The 2552 receives 5 VDC power from the 8900, 9900 or 9950. No additional power is required.

NOTE:

The maximum cable length from the 2552 to the 8900, 9900 or 9950 depends on the 8900, 9900 or 9950 configuration. Refer to the 8900 or 9900 manual for complete information.

Loop Wiring:

The 2552 is a traditional 2-wire passive 4 to 20 mA loop transmitter. External loop power (24 VDC \pm 10% regulated) is required. Please refer to the Model 7310 Power Supplies.

All 2552 Magmeters are shipped from the factory with the 4 to 20 mA output scaled for 0 to 5 m/s (0 to 16.4 ft/s). If this operating range is suitable, no adjustments are necessary.

- The maximum loop resistance the Magmeter can accommodate is 300 Ω .
- The cable length from the Magmeter to the loop monitor cannot exceed 300 m (1000 ft).

8900 Multi-Parameter

Maximum Cable Lengths for all Sensors used with the 8900

The I/O Module (3-8900.401-x) supports frequency and digital (S³L) signal types. These signal types are fundamentally different from one another, and the rules governing maximum cable lengths also differ, so the two types must be treated separately. Refer to the following two sections as necessary to determine the cable length limitations of any system.

Signal Type: Frequency

The maximum allowable cable length for flow sensors with frequency output is dependent upon the output signal strength of the sensors themselves, and the degree to which the signals are susceptible to EMI or “noise”. This is largely a function of whether the sensors are self-powered, or powered by an external source.

All of the sensors in the table below are compatible with the 8900. The three models limited to 60 m (200 ft) are self-powered sensors. The 8900 automatically provides power to the others via the I/O Module (normal sensor wiring).

Flow Sensor Models with Frequency Output

Maximum Cable Length	515	525	2000	2100	2507	2536	2537	2540	2551	2552
60 m (200 ft)	X	X								
305 m (1000 ft)			X	X	X	X	X	X	X	X

V. Rear Terminal Views Signet Instruments

Multi-Parameter (continued) Signal Type: Digital (S³L)

Step 1: Calculate the Total Current Requirements for S³L Branches

This information will determine the total current consumption of all digital (S³L) sensors on a branch of the digital (S³L) bus, as a means of determining if the sensor load is within the current rating of the cable. Fill in the chart to determine the current requirements for a specific set of sensors.

Maximum Current Consumption for S³L Devices

	Current		Quantity	Total	
2350 Temperature Sensor	1 mA	X	_____ =	_____	Example: none 2 Press 1 mA x 2 = 2 mA 2 Mags 15 mA x 2 = 30 mA 2 pH 3 mA x 2 = 6 mA none none none Total 38 mA
2450 Pressure Sensor	1 mA	X	_____ =	_____	
2551/2552 Magmeter	15 mA	X	_____ =	_____	
2751 pH/ORP Sensor Electronics	3 mA	X	_____ =	_____	
2850 Cond. Sensor Electronics	2 mA	X	_____ =	_____	
8058 Current-digital (S ³ L) Converter	3 mA	X	_____ =	_____	
8059 External Relay Module**	1 mA	X	_____ =	_____	
Total current requirement on digital (S³L) bus				_____ mA	

** The digital (S³L) communication link between the 8900 and the 8059 is powered by the 8900 and consumes 1 mA maximum. However, the 8059 External Relay Module always requires a separate power source for its operation.

Step 2 Determine the Maximum Length of each Branch of the (S³L) Bus

This chart determines the maximum length of one branch of the digital (S³L) bus. This distance is important because it ensures that the digital signal can successfully travel the length of the cable and still be detected by the 8900.

- Find the column nearest to the total current in this branch, as determined in step 1.
- Find the cable gauge or wire dimensions that most accurately represent the cable being used.
- The number at the intersection of these factors represents the maximum cable for one branch of the (S³L) bus.
- The top section references AWG cables, the lower section is based on METRIC cables.
- Dividing the sensors between two branches will greatly increase the maximum cable length of each branch.
 Example: 40 mA total on one branch can sustain 70 ft of cable. 20 mA on two branches can sustain 140 ft on each branch.

Maximum Cable (AWG)

Power Supply Current (mA)

AWG	Ω/ft	1	2	4	10	15	20	40	60	90	
24	0.0277	1800	900	450	180	120	90	40	30	20	Feet
22	0.0175	2850	1420	710	280	190	140	70	40	30	
20	0.0109	3000	2290	1140	450	300	220	110	70	50	
18	0.0069	3000	3000	1810	720	480	360	180	120	80	
16	0.0044	3000	3000	2840	1130	750	560	280	180	120	

Maximum Cable (Metric)

Area mm ²	Diameter mm	Ω/m	1	2	4	10	15	20	40	60	90	
0.2	0.50463	0.0885	560	280	140	50	30	20	10	0	0	Meters
0.25	0.56419	0.0708	700	350	170	70	40	30	10	10	0	
0.5	0.79789	0.0354	900	700	350	140	90	70	30	20	10	
0.75	0.97721	0.0236	900	900	520	210	140	100	50	30	20	
1	1.12839	0.0177	900	900	700	280	180	140	70	40	30	
1.5	1.38199	0.0118	900	900	900	420	280	210	100	70	40	

Step 3 Determine the Maximum Total Cable Length of the Digital (S³L) Bus

The quality of the cable used in the bus determines the maximum length of all branches combined. The maximum cable length may not exceed these limits, regardless of current requirements.

Cable

Capacitance (pF/ft)	Max. Total Distance	Comments
<50 pF/ft	900 ft	Even the most economical cables meet this specification.
<30 pF/ft	1500 ft	Cables from Signet fall into this category.
<15 pF/ft	3000 ft	Cables meeting this specification are very expensive network cables.
pF/m	Max. Total Distance	
<150 pF/m	300 m	Even the most economical cables meet this specification.
<100 pF/m	450 m	Cables from Signet fall into this category.
<50 pF/m	900 m	Cables meeting this specification are very expensive network cables.

Technical Reference Section: Standards and Approvals

CE Mark

CE Marking on a product is a legal requirement for selling in the EU stating the conformity with specific European Union (EU) directives. It is a self-declaration that a product complies with the essential requirements of the relevant European health, safety and environmental protection legislation. For our products the relevant directives are "Low Voltage" and "Electromagnetic Conformity ("EMC").

Low Voltage Directive

This directive refers to products that require voltage ranges from 50 to 1000 volts for AC (alternating current) and 75 to 1500 volts for DC (direct current).

EMC Directive

This directive defines the minimum requirements for immunity and maximum emissions with related tests for electronic equipment. These tests are only relevant for "active" circuitry, which refers to products that contain semiconductors that can be affected by electromagnetic interference (EMI) or generate themselves EMI. Products that do not contain such active circuits (like 515, 525 or pH sensors) are exempt from the requirements from this directive, thus do not require the CE marking.

UL Listing

Underwriters Laboratory (UL) is recognized as a Nationally Recognized Testing Laboratory (NRTL). UL is required for products intended to be connected to voltage levels that may cause "Hazardous Live" conditions. For all practical purposes this means the connection of 120V or 240V AC to either an AC power supply or the contacts of relays. Furthermore we list products equipped with certain types of batteries that may cause specific safety concerns (e.g. explosion) other than the voltage rating. Manufacturers submit products to UL for testing and safety certification on a voluntary basis and therefore UL is not required by law. Products with the UL mark can assure customers that they are buying products that have been tested to a standard that will help prevent danger or accidents in case of hazardous conditions. All products that have mechanical relays such the ProcessPro, ProPoint, Multi-Parameter, Display Magmeter with relays, and 2537, all qualify for the UL listing because of the relay ratings which are typically 240 VAC max and 5A max. Products that contain a battery, such as the 8150, also require UL to safety test the current discharge amount that can cause a fire/explosion. Canada also has the UL Listing, however, the products in Canada will be listed under CUL.

ETL

Intertek (ETL) is also recognized as a Nationally Recognized Testing Laboratory (NRTL). ETL provides product safety testing and certification, and is equally recognized and accepted as UL. ETL evaluates products using UL, CSA, and other harmonized standards. It is also voluntary.

China RoHS

(Restriction of Hazardous Substances), officially known as **Administrative Measure on the Control of Pollution Caused by Electronic Information Products**, is a Chinese government regulation to control six EU RoHS substances and other hazardous substances which have not been defined. All items shipped to China now have to be marked whether the items contained in the box are compliant or non-compliant. The Electronic

Information Products (EIP)  logo is used to mark parts and assemblies where these identified materials are within acceptable limits, and are environmentally safe. Units that do contain hazardous substances are marked with the EIP logo  including an Environment Friendly Use Period (EFUP) value in years.

RoHS and WEEE

The Restriction of Hazardous Substances Directive 2002/95/EC (RoHS Directive) and the Waste Electrical and Electronic Equipment Directive 2002/96/EC (WEEE Directive) were adopted in February 2003 by the European Union. RoHS Directive bans the placing on the EU market of new electrical and electronic equipment containing more than agreed levels of lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyl (PBB) and polybrominated diphenyl ether (PBDE) flame retardants. It is closely linked with the WEEE Directive which sets collection, recycling and recovery targets for electrical goods and is part of a legislative initiative to solve the problem of huge amounts of toxic e-waste. For disassembly instructions, please refer to our website.

On June 8, 2011, RoHS Recast Directive 2011/65/EU (revision to the RoHS Directive 2002/95/EC) was adopted and published in the Official Journal of the European Union on July 1, 2011. It repeals the original RoHS Directive, 2002/95/EC. The 2011/65/EU directive specifies its scope of coverage in Annex 1, Categories 1-11. In addition, Article 4, Paragraph 3, states that the directive shall apply to industrial monitoring and control instruments which are placed on the market from 22 July 2017.

The Recast codifies documentation, marking, and manufacturer, importer and distributor responsibilities under the Directive, including product CE marking and manufacturer Declaration of Conformity.

It is important to understand that GF Signet products will remain compliant although RoHS logo and declaration statements will change. All relevant literature and products (product labels, data sheets, manuals, catalogs, etc.) will be updated by July 22, 2017.

Starting January 2013 we will begin removing the EU Lead Free RoHS logo  from all relevant published literature and products. A conformity declaration will be available on our website and in the local language of the European Union (EU) market as they become available.

ISO 9001 / 14001 and OHSAS 18001

- ISO 9001 provides the requirements for quality management systems, is now firmly established as the globally implemented standard for providing assurance about the ability to satisfy quality requirements and to enhance customer satisfaction in supplier-customer relationships.
- ISO 14001 provides the requirements for environmental management systems, confirms its global relevance for organizations wishing to operate in an environmentally sustainable manner.
- OHSAS 18001 provided the occupational health and safety activities and associated supporting processes associated with the design, production and service of flow and analytical sensors, transmitters, controllers, indicators, instruments and accessories of their products and services.

Technical Reference Section: Standards and Approvals

The people of Georg Fischer Signet LLC are dedicated to the design, manufacture and support of products that meet or exceed the requirements of our customers. We pledge to do this by developing safe processes and procedures which continuously improve our systems, products and the environment.

We target appropriate goals in our business environment, being mindful of legal requirements, regulations, customer requests and the prevention of pollution. We are committed to enhancing our employees health and safety.

This policy was developed by the executive management of the company. We train all employees in the requirements of this policy, and we document, audit, review, and revise our business systems regularly to ensure that it remains appropriate and effective to achieve our goals.

FCC

Federal Communications Commission (FCC) is an independent U.S. Federal Government agency responsible for the management of the radio spectrum in the US. The FCC regulates interstate and international communications by radio, television, wire, satellite and cable in all 50 states, the District of Columbia and U.S. territories.

Electrical and electronic products may interfere by producing radio spectrum noise. As electric current moves around inside an electrical product, the current will produce electromagnetic field waves that will travel through space. Those waves may affect other electrical currents in other products, and cause unwanted interference.

We ensure our products have been tested and are compliant with the radio pollution limits and equipment authorization procedures.

NSF/ANSI 61 and NSF/ANSI 372

NSF International is an accredited, independent third-party certification body that tests and certifies products to verify they meet these public health and safety standards. Products that meet these standards bear the NSF mark.

Georg Fischer Signet LLC has received certification under NSF/ANSI 61: Drinking Water System Components - Health Effects, for its Polypropylene Flow sensors, PVC-U Tee Fittings, and PVC-U Clamp-on Saddles in February of 2015.

Products are also certified to NSF/ANSI 372: Drinking Water System Components - Lead Content and conform to the lead content requirements for "lead free" plumbing as defined by California, Vermont, Maryland, and Louisiana state laws and the U.S. Safe Drinking Water Act.

The water contact temperature listed in the certification is CLD 23, which is 23 degrees Celsius, or 73 degrees Fahrenheit, or ambient temperature.

Signet products bearing the NSF mark means the product complies with NSF/ANSI 61 and NSF/ANSI 372 requirements. NSF conducts periodic unannounced inspections and product testing to verify that the product continues to comply with the applicable standards.

The mark also provides:

Knowledge that an impartial review against established criteria or guidelines has been conducted. Evidence that product labeling and claims have been objectively reviewed by a trusted third party. Backing by a team of professionals dedicated to public health and safety operating in more than 150 countries.

Lloyd's Register Type Approval

Lloyd's Register Group Limited (LR) is a technical and business services organization and a maritime classification society.

A Type Approval from Lloyd's Register demonstrates that the product conforms to recognized industry quality standards, International Conventions and/ or the LR Rules, through a process of independent design review, sample testing and verification of production controls.

ATEX

The ATEX Directives, 99/92/EC and 94/9/EC, applies to equipment intended to be used where an explosive atmosphere is present, when they are first placed on the European Union Market. Products that comply with the ATEX Directive bear the CE and the ATEX marks.

The ATEX Directive defines procedures that manufacturers have to apply before placing a product on the market. The procedures are intended to demonstrate the due diligence of the manufacturers of the equipment and, in some cases, involves Notified Bodies.

PROFIBUS and PROFINET International (PI):

PROFIBUS and PROFINET International (PI) is an independent organization responsible for the PROFIBUS and PROFINET protocols. PROFIBUS is standardized by the International Electrotechnical Commission (IEC) as IEC 61158. PI, through its regional associations, competence centers, training centers and test labs ensure high quality products and devices that implement the PROFIBUS standards. GF Signet products that implement the PROFIBUS protocol are tested and certified by PROFIBUS and PROFINET International and the PI Test Labs.

HART®

HART is a bi-directional communication protocol that provides data access between intelligent field instruments and host systems. A host can be any software application from a technician's hand-held device or laptop to a plant's process control, asset management, safety or other system using any control platform.

All Signet devices that use the HART Protocol as a basis for communications are tested according to the standards contained in HART Protocol Specification 7.2 (HCF_TEST-1 through HCF_TEST-4) to ensure full compliance with all Protocol requirements prior to being listed in the Foundation's Supplier Product Catalog.

HART is a registered trademark of the HART Communication Foundation.

Technical Reference Section: Modbus

The Modbus protocol was developed by Modicon, now a part of Schneider Electric, in 1979 to share information between Modicon Programmable Logic Controllers (PLCs) and remote devices. The Modbus protocol is now controlled by the Modbus Organization. Modbus is an open and freely implemented communication protocol.

Modbus can be used on various networks; the most common implementations are on a serial two wire RS485 network or as Modbus TCP using an Ethernet network. GF Signet supports the Serial RS485 version of the Modbus protocol on the 9900 SmartPro transmitter.

RS485 Serial is a two-wire differential network. The use of differential signaling increases the networks immunity to electrical interference. Data is sent along the two wires with one wire at a higher voltage potential than the other wire. The difference in the voltages on the two wires is interpreted as a binary 0 or 1. If noise is superimposed on the wires the noise source has the potential on both wires. Since the potential voltage is the same the noise is ignored. The improved noise resistance allows Modbus to networks to have a maximum distance of 1000 meters or 3280 ft.

Modbus uses a Client/Server architecture. Client devices, such as PLCs or SCADA Systems, query server devices, such as the 9900, on the network. Each Server device is assigned an address in the range of 1 to 247. Typically, up to 16 Servers devices are on a network but a maximum of 32 are allowed.

Within each Server device register addresses are assigned to each piece of available data. This data can indicate the state of a relay, 1 = on or 0 = off, the output of a current loop, 12.3 mA, or the value of a measurement reading, 7.24 pH. Some data is read only, a Client can read the data from the Server but cannot change the data in the Server, such as a measurement value. Other data can be read or written on the Server, the Client can read the data or change the data by writing new data to the server. For example, a relay set point could be read by the Client and the Client can then change the set point by writing a different value back to the Server. The data and addresses are documented in the manuals available from the manufacture.

Technical Reference Section: Communication Protocol

PROFIBUS

General Theory of Operation

PROFIBUS (Process Field Bus) was developed in the late 1980s by a consortium of companies, institutes, and the German government. In 1993 a simpler and faster version of the protocol was developed PROFIBUS DP (Decentralized Peripherals). Profibus was standardized in 1991/1993 by the German Institute for Standardization as DIN 19245. In 1996 it was included in European Standard EN 50170 and in 1999 Profibus became a part of the International Electrotechnical Commission standards IEC 61158/IEC 61784.

Automation systems that do not use a digital bus protocol require all devices to be wired back to the central controller. This increases installation, start up, and maintenance costs due to the increased wiring complexity. The controller interacts with external devices using on/off or analog signals, reducing the amount of information that can be exchanged between the controller and the device to single pieces of information, is the device on or off or the value of a single parameter as represented by an analog signal.

PROFIBUS DP is a high speed serial communications protocol designed to connect distributed devices to a centralized controller. The PROFIBUS protocol allows many devices to share a single cable. PROFIBUS transmits process values, diagnostic, and configuration parameters over the network.

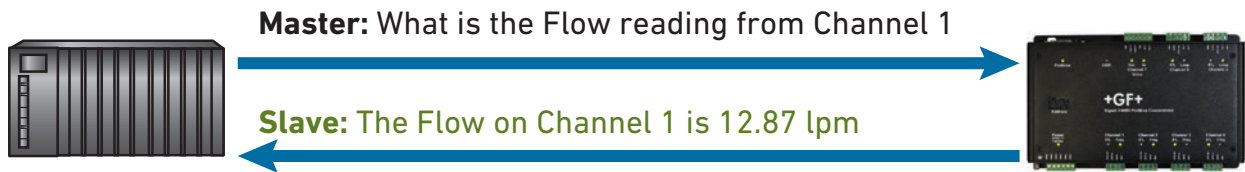

Automation systems that use a digital bus protocol, such as PROFIBUS, interconnect devices over a common cable. PROFIBUS allows two way communications between the controller and external devices. Configuration information, diagnostic data, along with process values are transmitted over the PROFIBUS cable reducing wiring, easing system configuration and start up, and offering diagnostic information to quickly troubleshoot and respond to errors in the field.

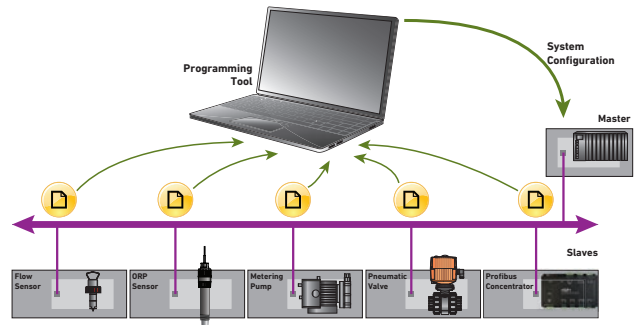

Technical Reference Section: Communication Protocol

The PROFIBUS protocol is a master/slave protocol where one, or more, master(s) initiate communications and slave devices respond to the requests from the master(s).

Profibus devices are supplied with a General Station Description (GSD) file. The GSD file is a text file created by the device manufacturer and supplied either with the device or downloaded from the manufacturer's or PI's website. The GSD file describes the capabilities, information that can be exchanged, configuration parameters, and diagnostic information that is available from the device so that the master(s) can communicate with the remote device. The GSD file is loaded into a configuration or programming tool which the Automation System Programmer uses to program the master.

Each device on the Profibus cable is assigned a unique address. Profibus allows up to 127 devices, masters and slaves, on a single network. The master device is programmed with the addresses of the each device in the system and, in combination with the information from the GSD file, is able to communicate with the remote devices.

When the automation system is started, a slave is powered up, or a new slave attached to the Profibus network the master will send configuration information down to the slave device. The slave device will compare the configuration sent by the master to its actual configuration and inform the master of any differences between the actual configuration and what the master was expecting.

Technical Reference Section: Communication Protocol

If there are discrepancies between the configurations in the master and how the slave is physically configured the slave will report the error back to the master. The master uses this information to determine the appropriate action to take, such as alerting an operator or preventing incorrect operations of the misconfigured slave.

After the automation system is configured data is transferred between the slaves and the master(s) on a fixed timeframe. The update rate from each slave is fixed and is determined by the bus speed, the number of devices on the Profibus network and the amount of data each device is transferring.

Transmission Rate (1000 bits per second)	Transmission range between repeaters in Meters (Feet)
9.6 to 93.75	1200 (3,935)
187.5	1000 (3,280)
500	400 (1,310)
1,500	200 (655)
3,000 to 12,000	100 (325)

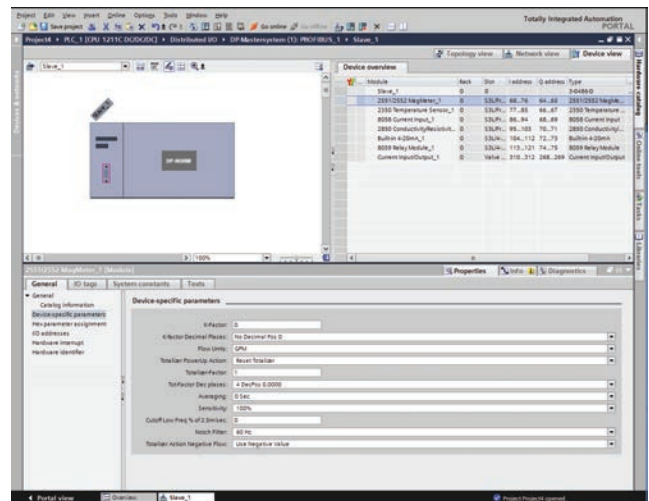

The GF Signet 3-0486 Profibus Concentrator is certified to the PROFIBUS DP V1 standard. The Profibus Concentrator contains six digital (S³L) channels and a single current loop (4 to 20 mA) input and output channel. The six digital (S³L) channels are dual use; four channels will support frequency, Open Collector or Sinusoidal output, flow sensors, two channels will support current loop inputs. The Profibus Concentrator is compatible with all Signet (S³L) devices, flow, pH/ORP, conductivity, pressure, temperature, level, dissolved oxygen, current loop (8058), and relay module (8059).

The Signet GSD file allows the user to configure sensors similar to the programming of 8900 or 9900 transmitters. The user can select engineering units for the measurements, adjust averaging and sensitivity settings, and set fail safe values for outputs to be used if master communications is lost.

The Profibus Concentrator simplifies programming by offering a consistent interface to the automation programmer. Each channel supports two measurement parameters, Primary and Secondary measurements, a status byte and a control word. The primary parameter returns the sensor's main reading such as flow rate or pH. The secondary reading returns other information such as temperature, totalizer values or raw mAs. On certain sensors the programmer can select what parameter to return as the secondary measurement.

All digital (S³L) devices return a status byte. The status byte will indicate if the device is working correctly or if there is an error, such as missing sensor, wrong sensor connected to the channel, or a measurement error. The information from the status byte allows the automation programmer to detect errors and take appropriate actions to prevent upsets in the process.

Profibus DP supports bus speeds from 9,600 bits per second (bps) to 12,000,000 bps. Profibus DP installations with cable type A, twisted, shielded two-wire cable, interconnects have a transmission range between repeaters as shown in the chart.

Digital (S³L) devices that allow the programmer to configure options, reset totalizers, or activate outputs, such as current loop or relays, are written using the control word. The automation programmer can set individual bits to enable options, reset totalizers, or activate relays. The value of the current loop output is set by writing the desired current value to the control word.

Additional information on the programming and use of the Profibus Concentrator can be found in the Installation and GSD Manual.

Technical Reference Section: Chlorine

General Theory of Operation

The process of disinfecting drinking water to remove water-borne viruses and bacteria is essential to protecting public health. Chlorination of water prior to distribution is important, however other factors must also be taken into consideration to prevent outbreaks of water-borne diseases. Examples include protection of the water source itself, filtration of surface water supplies to remove pathogens and particles (turbidity), the integrity of the distribution piping system and ensuring there is enough Chlorine residual in the water to maintain a safe disinfectant level at the end of the distribution network.

Chlorine is very effective in killing a wide variety of common water-borne viruses such as e-coli, salmonella and leptospira. Chlorine is also very effective in the removal of foul taste and odor from water and reduces bio-slime in tanks, heat exchangers and distribution piping systems.

Chlorine is available in three forms that are used in water treatment, Chlorine gas and sodium or calcium hypochlorite.

Chlorine gas is the most cost effective method of disinfecting water and is the predominant form of chlorine used in the USA and Asia. The main concerns for the use of Chlorine gas is the need for specialized training and a response program in case of a storage tank rupture or leaks.

Hypochlorite (sodium hypochlorite or calcium hypochlorite) is the second choice of chlorination. Sodium hypochlorite is more expensive to generate on-site, but is favored in remote locations where there is electrical power available. Hypochlorites are usually selected if there is no availability of chlorine gas or if a good safety program can not be put into place.

Chloride dissociates in water to form two chemicals, Hypochlorous acid (HOCl) and hypochlorite ion (OCl⁻). Both are considered "free" chlorine, however, the HOCl provides the strongest disinfectant and oxidizing characteristics. The ratio between these chemicals is pH dependent.

At pH 4 to 5.5, HOCl is exclusively present. At this pH, the HOCl is very aggressive and causes corrosion. When pH levels exceed 9.0, OCl⁻ is exclusively present. Although

OCl⁻ is still considered a disinfectant, the contact time at these pH levels need to be extended to properly disinfect. At pH 7.5, there is an even amount of HOCl and OCl⁻. Processes that maintain a pH level of 7.2 create a strong presence of HOCl, which is a faster disinfectant than the OCl⁻. Free chlorine is measured in parts per million (ppm) or milligrams per liter (mg/l).

Chlorine gas and sodium or calcium hypochlorite reactions produce the desired HOCl, however, the end products of the reaction are very different. The reaction of chlorine gas and water produces an end product of hydrochloric acid (HCl) which tends to lower the pH, while the Hypochlorite reaction tends to raise the pH of the water due to the creation of the hydroxyl ions.

Chlorine Gas:

Sodium Hypochlorite:

Calcium Hypochlorite

There are six factors that influence the effectiveness of chlorine.

1. pH - Chlorine is most effective between 7.2 and 7.5 when the predominate chemical is HOCl.
2. Temperature - Higher temperatures allows fast reaction.
3. Turbidity - Suspended particals act as a food source and shelter for organisms.
4. Contact time - Must be calculated using the pH level and temperature of the water.
5. Adequate mixing - Mixing of chlorine is very important.
6. Measurement control system - A system that can accurately measure the chlorine levels and control the dosing of chlorine to maintain the proper chlorine levels.

Technical Reference Section: Chlorine

4630 Flow Cell Design

The 4630 Chlorine Analyzer System's flow cell is designed with unique features:

1. Built in flow regulator - Allows the system to be installed into any service line with pressures ranging from 15 to 120 psi (1 to 8 bar).
2. Built in VAFM - To provide at a quick glance that the water flow across the sensor membrane is good.
3. Flow cell design and sensor placement - Reduces the build up of bubbles on the sensor.
4. Sensors press fit into the flow cell - For easy removal during service and calibration.
5. Inlet port connector with check valve - The internal check valve allows the technician to interrupt flow by simply removing the connector from the flow cell.

6. Cut off valves - Provided to isolate the drain and influent flow stream
7. A sample port - Provided for DPD test verification

For gravity feed applications or systems that have an influent pressure below 15 psi will need to have the internal flow regulator removed. As long as there is a constant steady flow stream across the sensor and the VAFM indicator is above the "MIN" line accurate chlorine levels can be obtained.

- Open the flow cell by removing the six bolts
- Remove the regulator assembly
- Reinstall flow cell bolts and torque bolts per instructions on the back of the flow cell or in the manual. (see cleaning)

Technical Reference Section: Chlorine

2630 Amperometric Chlorine Electrode

Theory of Operation

The Signet 2630 Amperometric Chlorine Electrode is an electrochemical sensor which generates an internal current that is proportional to the concentration of the chlorine in the sample.

The electrochemical sensors' construction includes a hydrophobic membrane that allows the diffusion of hypochlorous acid (HOCl), which causes a reaction with the gold cathode (working electrode) and destroys the HOCl. This electrochemical reaction consumes two electrons.

Cathode (working electrode): $\text{HOCl} + \text{H}^+ + 2\text{e}^- \rightarrow \text{Cl}^- + \text{H}_2\text{O}$ (reduction of hypochlorous acid)

A silver/silver chloride Anode (counter electrode) provides the source of electrons for the cathode reaction and also acts as a reference electrode.

Anode (reference electrode): $2\text{Cl}^- + 2\text{Ag}^0 \rightarrow 2\text{AgCl} + 2\text{e}^-$ (oxidation of the silver)

The two metal electrodes are separated by an electrolyte solution that allows the transfer of ions to pass from cathode to anode, generating a small nA signal; typically 20 to 60 nA per 1 ppm of chlorine.

A Pt1000 temperature element ensures accurate chlorine measurements over a wide range of temperatures.

The 2630 electrode is connected to the 2650 electronics which provides the polarizing voltage between the cathode and anode and provides chlorine information to be displayed on the 8630 Chlorine Transmitter.

2630 Sensor Maintenance

Servicing of the sensor is necessary. Sensor maintenance consists of changing the membrane when it is torn and changing the internal electrolyte solution when the system can not maintain calibration or the chlorine level drifts.

Membrane Change

1. Remove the membrane cap (do not use tools) by holding the sensor in one hand and twist off the membrane cap with the other hand.
2. Inspect the sensor cathode for any defects and verify the 8 openings in the tip of the sensor are clear and unobstructed.

Electrolyte Replacement

1. Remove the membrane cap (do not use tools) by holding the sensor in one hand and twist off the membrane cap with the other hand
2. Inspect the sensor cathode for any defects and verify the 8 openings in the tip of the sensor are clear and unobstructed.
3. Turn the sensor upside down and shake the internal electrolyte out of the sensor.
4. Using the syringe provided with the sensor inject 14 ml of the new electrolyte into one of the eight holes in the sensor tip until the electrolyte bubbles out.
5. Install new membrane cap slowly.

Technical Reference Section: Chlorine

Easy Cleaning of the Flow Cell

The design of the 4630 flow cell allows for easy cleaning:

1. Remove the electrodes from the flow cell
2. Remove the three knurl nuts and remove the cell from the panel
3. Remove the 6 bolts that hold the two halves of the cell together
4. Remove the O-ring string and inspect and replace if necessary

Do not use an abrasive cleaner or brush that could damage the O-ring groove.

Assembly of the flow cell requires the six bolts to be torqued in the proper sequence. The torqued information is provided on the back of the flow cell for easy reference.

Common Terms*

Free available residual chlorine That portion of the total available residual chlorine composed of dissolved chlorine gas (Cl_2), hypochlorous acid (HOCl), and/or hypochlorite ion (OCl^-) remaining in water after chlorination. This does not include chlorine that has combined with ammonia, nitrogen, or other compounds.

Total residual chlorine The amount of available chlorine remaining after a given contact time. The sum of the combined available residual chlorine and the free available residual chlorine.

Combined available residual chlorine The concentration of residual chlorine which is combined with ammonia (NH_3) and/or organic nitrogen in water as a chloramine (or other chloro derivative) yet is still available to oxidize organic matter and utilize its bactericidal properties.

Chlorine demand Chlorine demand is the difference between the amount of chlorine added to water and the amount of residual chlorine remaining after a given contact time. Chlorine demand may change with dosage, time, temperature, pH, and nature and amount of the impurities in the water.

Breakpoint chlorination Addition of chlorine to water until the chlorine demand has been satisfied. At this point, further additions of chlorine will result in a free residual chlorine that is directly proportional to the amount of chlorine added beyond the breakpoint.

Hypochlorite (Hi-poe-KLOR-ite) Chemical compounds containing available chlorine; used for disinfection. They are available as liquids (bleach) or solids (powder, granules and pellets). Salts of hypochlorous acid.

Milligrams per liter (mg/L) A measure of concentration of a dissolved substance. A concentration of one mg/L means that one milligram of a substance is dissolved in each liter of water. For practical purposes, this unit is equal to parts per million (ppm) since one liter of water is equal in weight to one million milligrams. Thus a liter of water containing 10 milligrams of calcium has 10 parts of calcium per one million parts of water, or 10 parts per million (10 ppm).

Dechlorination (dee-KLOR-uh-NAY-shun) The deliberate removal of chlorine from water. The partial or complete reduction of residual chlorine by any chemical or physical process.

Turbidity (ter-BID-it-tee) The cloudy appearance of water caused by the presence of suspended and colloidal matter. In the waterworks field, a turbidity measurement is used to indicate the clarity of water. Technically, turbidity is an optical property of the water based on the amount of light reflected by suspended particles. Turbidity cannot be directly equated to suspended solids because white particles reflect more light than dark-colored particles and many small particles will reflect more light than an equivalent large particle.

Technical Reference Section: Turbidity

Signet Model 3-4150-X

The Signet Model 3-4150-X instrument is commonly used to monitor and to control filter operation and performance in the domestic-utility drinking water industry. It is also used to monitor and to control filter operation and performance in the gray and tertiary recycled water industry as well. It does this by accurately sensing the amount of turbidity that's in the water.

The instrument uses the Nephelometric Method to measure turbidity which is based upon a comparison of the intensity of light that's scattered by a sample under defined and controlled conditions with the intensity of light scattered by a standard reference suspension. The greater the intensity of scattered light, the higher is the turbidity.

Because the Signet instrument uses a small cuvette rather than a large liquid measuring chamber, the 3-4150-x is easier and faster to calibrate than most other instruments on the market today.

The instrument is available with either of two (2) different light sources to meet standards in different parts of the world. For the United States, most of North and South America and most of Asia, a white light version meeting EPA 180.1 requirements is available. To meet requirements of ISO 7027 for Europe and most of Eastern Europe, an IR light version is available.

The instruments are designed to accept a range of different power levels between 100 and 240 volts – 47 - 63 Hz.

The instrument has two separate alarm relay outputs for high and low process limit conditions or to show instrument malfunction. The instrument also has a choice of a single analog signal or a single RS485 digital signal output for monitor and control functions by SCADA.

The power supply box of the instrument enclosure is rated NEMA 4X / IP66. Mounting under a sun-shade or indoors is recommended.

Velocity-based Flow Measurement Technologies

All of the flow sensors featured in the Signet catalog belong to the broad category of velocity-based flow measurement devices. This vast offering includes paddlewheel, electromagnetic, in-line rotor, and turbine flow sensors. Principles of operation vary considerably for each type, but some very important

installation considerations are common throughout. The following discussion, plus the general selection guidelines at the front of the catalog, should help the user choose the appropriate sensor type to obtain optimal flow measurement results.

All manuals, data sheets, and additional information are available at www.gfsignet.com

Fully Developed Turbulent Flow

Velocity-based flow sensors depend on fully developed turbulent flow for accurate and repeatable measurements. Fully developed turbulent flow occurs in Newtonian fluids with a Reynolds Number (Re) greater than 4,500. Low flow rates, viscous liquids, and large pipe sizes make fully developed turbulent flow more difficult to achieve. The opposite is also true. That is, for a given set of conditions, simply reducing the pipe size to increase the local flow velocity will produce a higher Reynolds Number.

Re: Reynolds Number

$$Re = 3,162.76 \times Q \times Sg / (\mu \times ID)$$

where:

Q = Flow Rate in GPM

Sg = Specific Gravity

μ = Dynamic Viscosity in Centipoise (cP)

ID = Pipe Inside Diameter in Inches

OR

$$Re = DN \times V / \nu$$

where:

DN = Pipe Inside Diameter (m)

V = Flow Velocity (m/s)

ν = Kinematic Viscosity (m²/s)

(ν of water = 1×10^{-6} m²/s)

Principles of Operation

Electromagnetic flow sensors, like Signet Models 2551 and 2552, operate on Faraday's principle of electromagnetic induction, and have no moving parts. As fluid (must be conductive >20 μ S) moves through the magnetic field produced at the sensor tip, a voltage occurs that is directly proportional to the fluid velocity. Internal electronics then convert this voltage into a frequency and/or a 4 to 20 mA output. Signet electromagnetic flow sensors are insertion-style, suitable for use in a wide range of pipe sizes.

Principles of Operation (continued)

Paddlewheel flow sensors are insertion devices, mounted perpendicular to the piping system, and rely upon the energy in the flow stream to spin a rotor (paddlewheel) around a stationary shaft. Most paddlewheel flow sensors utilize rotors with magnets embedded in each blade. The magnets are typically used either in conjunction with a coil internal to the

sensor housing to produce a sinusoidal output (self-generating, non-powered sensors), or to trigger an internal electronic switch to produce a square-wave output (transistor-type, powered sensors). Either way, the resulting frequency is directly proportional to the fluid velocity.

- 1) Sinusoidal sensors output a signal typical of self-generating, non-powered paddlewheel sensors such as the Model 515 or 525. The frequency and amplitude (voltage) both vary directly with flow rate.

- 2) Transistor-type sensors output a signal typical of powered sensors such as the Model 2536, 2540, and all other Signet powered flow sensors with frequency output.

In-Line Rotor flow sensors like the Signet Models 2000 and 2507 are similar to paddlewheel sensors, except the rotor is positioned in a flow cell. These types of sensors have a transistor-type output signal and are able to measure lower flow rates.

Turbine flow sensors are full-bore devices designed for low-flow measurements. Signet Model 2100 is offered in 6.4 mm and 12.7 mm (1/4 in. and 1/2 in.) line sizes. Many self-aligning end-connector options are available for installation simplicity and application versatility. Similar to paddlewheels, they rely upon the energy in the flow stream to spin a rotor (turbine).

The difference is that the shaft is in the centre of, and parallel to, the flow stream. The velocity of the fluid spins the turbine for detection by external electronic circuitry, producing a transistor-type square wave output with a frequency directly proportional to the flow rate.

Technical Reference Section: pH/ORP

Information in this section addresses frequently asked questions regarding pH and ORP and is provided as REFERENCE ONLY to supplement procedures and recommendations specifically outlined in individual product instruction manuals.

All manuals, data sheets, and additional helpful information are available at www.gfsignet.com

Definition of pH

pH is defined as the negative logarithm of the Hydrogen ion concentration in aqueous solutions. The common pH scale ranges from 0 to 14, with 7 being neutral water (H₂O). At pH 7, Hydrogen ions (H⁺) exist in equal concentration to Hydroxyl ions (OH⁻). A solution is considered to be acidic if the concentration of H⁺ exceeds that of OH⁻, and is indicated by pH values below 7. Conversely, a solution is considered to be basic if the concentration of H⁺ is less than that of OH⁻, and is indicated by pH values above 7.

Common Acids

1M HCl: 0.0 pH
Sulfuric Acid: 0.3 pH
Lemon Juice: 2.0 pH
Vinegar: 3.0 pH
Wine: 3.5 pH
Beer: 4.5 pH
Milk: 6.0 pH

Common Bases

Egg Whites: 7.5 pH
Seawater: 8.0 pH
Sodium Bicarbonate: 8.4 pH
Ammonia: 11.6 pH
Photo Developer: 12.0 pH
0.1M NaOH: 13.0 pH
Lye: 14.0 pH

pH Scale

(Theoretical: 59.16 mV/pH @ 25 °C)

Definition of ORP

ORP is an abbreviation for Oxidation-Reduction Potential. Oxidation is a term used to denote the occurrence of a molecule losing an electron. Reduction occurs as a molecule gains an electron. The "potential" is simply an indication of a solution's propensity to contribute or accept electrons. ORP reactions (sometimes referred to as REDOX) always take place simultaneously. There is never oxidation without reduction, and ORP electrodes are used to detect electrons exchanged by molecules as these reactions occur.

Both pH and ORP electrodes produce voltages that depend on the solutions in contact with their sensing ends. Most pH electrodes, including the Signet brand, are designed to produce 0 mV at pH 7, positive mV below pH 7 (associated with the charge of the Hydrogen ion, H⁺) and negative mV above pH 7 (associated with the charge of the Hydroxyl ion, OH⁻). According to the Nernst Equation, the interval between each pH unit is approximately 59.16 mV at 25 °C. This "raw" output is converted to a pH value by the display instrument.

The ORP scale is typically -1000 mV to +1000 mV, and the electrodes produce these values directly.

Whereas pH is a specific measure of the Hydrogen ion concentration in solution, ORP only provides relative measures of chemicals and cannot discriminate one from another. Although non-specific, it is a very useful and inexpensive method of monitoring and controlling the activity of such compounds as chlorine, ozone, bromine, cyanide, chromate, and many other chemical reactions.

It is worth noting that Temperature Compensation, very important for accurate pH measurement, is NOT used in ORP measurements. Temperature does indeed affect the reactionary potential of all chemicals, some to a greater extent than others. But even if the effects of temperature could be precisely known in all of the many different REDOX reactions, it would not be desirable to remove them from the measurement. True ORP is the direct measurement of electrons in transit during Oxidation-Reduction reactions, regardless of temperature.

Technical Reference Section: pH/ORP

Principle of Operation

Standard pH/ORP electrodes are also commonly called combination electrodes; a pH/ORP measuring electrode and a reference measuring electrode are combined in a single body. The pH/ORP sensor measures the amount of hydrogen ions in the liquid. The pH signal is measured against the steady reference signal. Various chemical elements leaching through the porous reference junction can react with the reference electrolyte, dilute the electrolyte solution, or attack the silver chloride element; in either case, it will disturb the steady reference signal. Stray electrical currents will also affect the steady reference signal. A temperature element is also built into the pH combination electrode. Instruments interpret the temperature compensated pH signal into a pH reading at 25 °C (77 °F). ORP values are not temperature dependent; Signet ORP sensors do not have temperature compensation.

Cutaway of 2724 pH electrode

Signet offers two different groups of Standard pH/ORP Electrode Models: Models 2724-2726 and 2774-2777

Differential pH/ORP electrodes function similar to the standard (combination) electrodes, but the reference design is modified and there is a third electrode, the solution ground. The pH and reference electrodes are measured against the solution ground. The solution ground drains stray currents away from the reference element, hence maintaining a steady signal at all times. The reference salt bridge slows or stops various chemical elements from leaching into the reference chamber. Chemicals that leach in may dilute the electrolyte but will not react with the glass-encased reference silver chloride element. The reference electrolyte can be refreshed if it is diluted or depleted. The temperature element is embedded in the pH/ORP electrode for an extremely quick response.

Cutaway of 2766 pH electrode

Signet offers one group of Differential pH/ORP Electrodes: Models 2764-2767

Technical Reference Section: pH/ORP

Standard Versus Differential pH/ORP Electrodes

Signet offers what is called combination pH/ORP electrodes; a combination of three or four electrodes built into one common body that measures the pH or ORP of the solutions. These electrodes are the pH/ORP sensing element, temperature sensing element (pH only), the reference, and sometimes a solution ground. An electrical path between the process solution, reference electrode, and the pH/ORP sensing electrode must always be present to complete the measuring circuit. When the circuit is broken or interrupted, the result is a faulty reading. There are only a few things in a chemical process that would affect the glass-sensing element. These include concentrations of HF, constant high temperatures, and particles that can break the glass. On the other hand, there are many problems that can

occur with the reference electrode. The reference silver chloride sensing element (wire) is exposed to the process liquid via the primary porous reference junction, which is in constant contact with the process and allows liquid to pass through to the reference electrolyte. Because of the direct contact with the process liquid, the reference electrolyte and reference silver chloride sensing element can react with chemicals in the process. Many application liquids do not chemically react with the reference and therefore a standard electrode will perform well in this scenario. However, there are other process chemicals that will easily attack the reference and therefore, a differential style electrode should be used. There are three advantages of the differential electrode:

1. If the process chemicals attack the KCl electrolyte, the reference electrolyte chamber is refillable.
2. If the reference junction becomes clogged by chemical reactions between the KCl and the process chemicals, the reference salt bridge is replaceable.
3. If there are stray currents or if there are process chemicals that attack the silver chloride wire in the standard electrodes, it will not attack it in the differential electrode because the wire is encased in a glass electrode.

A general rule of thumb is to use a differential electrode if you have mercury, copper, lead, chlorate, bromine, iodine, cyanide, or sulfide compounds in the process liquid. Differential electrodes may also be useful in processes where oil, grease, and dirt build up on the reference junction because it is easily replaced.

See Model 2764-2767 Differential pH/ORP catalog pages for more information on standard versus differential electrodes.

Technical Reference Section: pH/ORP

Important Application Tips

- It is important that the sensing end of pH and ORP electrodes remain wet, for it may be permanently damaged if allowed to dehydrate. This is true for both in-line and submersible installation configurations. However, be careful to keep the electrical interconnection between electrode and preamplifier dry and clean at all times. Moisture in this area can also cause permanent damage.
- pH control is best when performed in a tank. This is especially true in neutralization applications since it is very important for reagents to mix thoroughly with waste fluids, and to be allowed adequate time for the reactions to occur. Limiting adjustments to fewer than 3 pH units per stage, and sizing tanks to provide at least 10 minutes retention time, will increase the probability of producing safe effluents.
- For bulb-style pH and ORP electrodes, significant natural self-cleaning by turbulent eddies is achieved at velocities of 1.5 m/s or more (5 ft/s). Flat surface electrodes get adequate self-cleaning at velocities of 0.3 to 0.6 m/s (1 to 2 ft/s). In all cases, exposure to velocities greater than 3 m/s (10 ft/s) can cause excessive measurement noise and electrode wear and should be avoided.
- The aging of pH and ORP electrodes (i.e., reference depletion and decreased glass sensitivity) results from a series of chemical reactions. And as a general rule, the rates of chemical reactions double with every increase of 10 °C or 18 °F. This means shorter life expectancy for all pH and ORP electrodes as application temperatures increase.
- HF acid and strong caustics etch pH glass. High concentrations, especially at high temperatures, destroy electrodes quickly. For applications containing trace quantities of HF (< 2%), use the Signet 2726-HF electrode. This electrode has a polymeric constituent in the pH glass that resists attack by HF and extends the service life considerably over “normal” electrodes.
- In applications where process temperatures will drop below 10 °C (50 °F), use the bulb-style electrodes in place of the flat style electrode. This is a function of the electrical impedance of the glass that increases dramatically as temperature decreases.
- Proper electrode placement within a tank is also very important. Electrodes should be mounted in well-mixed areas, away from reagent and waste introduction. It is usually advisable to position the electrode near the discharge outlet of the tank.
- In-line pH control is not recommended because it is very difficult to determine the amounts of reagent necessary to achieve a desired reaction if both pH and flow are variables. However, in-line pH monitoring is very common and useful.

Maintenance Tips

- Cleaning pH and ORP electrodes and calibrating the systems should be done regularly. The required frequency is application-dependent, but once/week for cleaning, and twice/month for calibration is recommended.
- Isopropyl alcohol may be used for removing mild grease and oils from the pH sensitive glass or from the metallic tips of ORP electrodes. Use 5% HCl on porous reference junctions clogged with hard water deposits, or other solvents/detergents as necessary. Always consider the electrode's materials of construction when selecting a cleanser.
- The purpose of calibration is to compensate the system for the continual changes occurring within the electrodes. Like batteries, all pH and ORP electrodes eventually deplete and must be replaced. A good time to determine the condition of an electrode is after cleaning and during calibration. Note the mV readings in pH buffers and replace the electrode if its actual mV output differs more than 50 mV from these theoretical values: pH 7 = 0 mV, pH 4 = +177 mV, pH 10 = -177 mV. Replace an ORP electrode if its actual mV output differs more than 50 mV from the theoretical values in the table below:

ORP Values of Standard pH Buffers Saturated with Quinhydrone

	pH 4			pH 7		
Temperature (°C)	20	25	30	20	25	30
ORP Value (mV)	268	264	258	92	87	79

- The typical shelf-life recommendation for Signet pH and ORP electrodes is 12 months at 25 °C (77 °F).
- Refrigeration will extend this period, but do not allow them to freeze! Expansion of internal solutions during freezing can cause permanent damage to the electrodes.
- The risk of putting older electrodes into service is the possible disappointment of shorter than expected service-life. All Signet pH and ORP electrodes are marked with date codes to identify the date of manufacture.

Technical Reference Section: Conductivity/Resistivity

Information in this section addresses frequently asked questions regarding Conductivity (Resistivity) and is provided as REFERENCE ONLY to supplement procedures and recommendations specifically outlined in individual product instruction manuals.

All manuals, data sheets, and additional helpful information are available at www.gfsignet.com

Definition of Conductivity and Resistivity

Conductivity is a measure of the ability of a material to convey an electric current. The proper term for this ability of a solution is electrolytic conductivity, since only ions conduct electric current in solution. When dissolved in solution, many substances such as salts, acids and bases dissociate into ions. Electrolytic conductivity (or simply conductivity) is therefore an indirect measure of the ionic concentration of a solution. Generally, conductivity increases and decreases with the concentration of ions.

Unlike pH, which is a specific measure of Hydrogen ion concentration, conductivity is a non-selective measurement of all the dissolved ionic species in a solution. As such, it is a highly utilized parameter in water, wastewater and industrial process analyses. For example, conductivity is used to monitor the salt load of waters entering treatment facilities, to monitor and control the quality of drinking water and ultra-pure water, and to otherwise detect contaminants in industrial processes.

According to the International Standards Organization (ISO) the unit of conductance is the Siemens (S), after Werner von Siemens (1816-1892). However, the following three separate units of measure are commonly used to express conductivity: Siemens/cm (S/cm), mhos/cm, and $\mu\text{S}/\text{cm}$.

For any given measurement Siemens/cm and mhos/cm

are exactly equal; they are merely different labels for the same value. The denominator in these units (cm) is sometimes truncated but is always assumed to be present.

Ohm•cm is a unit of resistivity (the inverse of conductivity) and is frequently replaced by “ Ω ” the symbol for electrical resistance. Units of resistivity are most commonly associated with ultra-pure water measurements in the millions of ohm•cm, or M Ω (megohms).

Some users will also find it desirable to express conductivity in terms of parts per million (PPM) or parts per billion (PPB) of total dissolved solids (TDS). Signet instruments accommodate this by allowing the entry of a TDS factor to convert from standard units of conductivity. (See the instruction manual of any current Signet conductivity instrument for details.)

Conductivity is a measurement parameter with a very wide range. For example, ultra-pure water has a theoretical maximum resistivity of approximately 18.2 M Ω , approximately 0.055 μS (microsiemens), whereas concentrated acids and bases can exceed 400,000 μS . Despite the wide-ranging possibilities most applications for conductivity measurement are much narrower. Tap water, for instance, typically measures between 50 and 1,000 μS .

Technical Reference Section: Conductivity/Resistivity

Principle of Operation

Most conductivity electrodes consist of two measuring half-cells. The geometry of the half-cells can be tailored to provide highly accurate measurements over a specific conductivity range. Cell constants help to describe electrode geometry for the purpose of selecting the appropriate electrode for a given application. A cell constant is defined as the length between the two half-cells divided by the area of the cells.

$$\text{Conductivity Cell Constant} = \frac{\text{Length}}{\text{CSA}^*} = \frac{z}{xy}$$

As an example, When $x = y = z = 1\text{ cm}$ the cell constant becomes $\frac{1\text{ cm}}{1\text{ cm}^2} = 1\text{ cm}^{-1}$

Solutions of very low conductivity (high resistivity) such as ultra-pure water are best measured with half-cells that are very close together (i.e., cell constant = 0.01 cm^{-1}). Highly conductive solutions should be measured with half-cells that are farther apart and have relatively little cross sectional area between them (i.e., cell constant = 20.0 cm^{-1}).

* CSA is cross sectional area.

Temperature Compensation

The conductivity of a solution is highly dependent upon temperature. Therefore, conductivity measurements are almost always converted to an equivalent conductivity at the common reference temperature of $25\text{ }^\circ\text{C}$ ($77\text{ }^\circ\text{F}$). This is accomplished by means of temperature compensation algorithms in the instruments, which require temperature as well as conductivity measurement input. To simplify and facilitate this requirement all Signet conductivity electrodes contain high-quality temperature sensing elements intelligently positioned for quick and accurate response.

Temperature effects on conductivity are more or less linear for normal water-based solutions, hovering around 2% per $^\circ\text{C}$. However, the actual linear relationship varies considerably with the ionic composition of the solution and can range from less than 1% to more than 3% per $^\circ\text{C}$.

Temperature Compensation Exception

One exception to the requirement for temperature compensation has been established by USP (United States Pharmacopeia), which prescribes limits of acceptability for ultra-pure water quality based upon non-compensated measurements. This methodology is used to eliminate measurement variances that may result from differences in the pure-water temperature compensation algorithms used by

This is true of regional ground water sources as well as for other solutions such as brackish water, acids and bases. Signet instruments allow the entry of custom linear compensation coefficients for these applications. See the instruction manual of any Signet conductivity instrument for details.

The conductivity or resistivity of pure water is not a linear function with respect to temperature. In fact, the latest Signet conductivity instruments utilize a sophisticated polynomial to compensate for the peculiar effects. For seamless measurement accuracy all current Signet conductivity instruments switch automatically between linear and pure-water compensation as certain measurement thresholds are crossed.

different manufacturers of conductivity measurement equipment. A more thorough treatment of the USP standard and instrument functionality can be found in the instruction manuals of the following Signet conductivity instruments: Model 8900 Multi-Channel, Multi-Parameter Controller (Appendix D), model 8860 Dual Channel Conductivity/Resistivity Controller.

Relay Information

The two most common methods of controlling a process are “on/off” and “proportional” control. In on/off control, relay setpoints are defined as either high or low limits on the process variable. When the measurement value reaches a limit the relay is

energized, typically for the purpose of opening a valve or starting a pump to introduce a chemical reagent to the process. This should cause the measurement value to change in the direction of the setpoint as shown in these on/off control diagrams:

High limit on/off relay control

Low limit on/off control

Notice the relay will not de-energize until the setpoint is exceeded by the hysteresis value. This is a programmable value and is primarily used to prevent “relay chatter”, which occurs if a relay is set to energize and de-energize at the same value. Because of hysteresis, and because reagent delivery is fairly constant while the relay is energized, a condition known as “overshoot” is inherent to the on/off control method. Overshoot refers to the introduction of more chemical reagent than is absolutely necessary for achieving a desired adjustment to the process value, and can be expensive over time.

The example shown here illustrates how two relays in “pulse mode” can be used to proportionally control pH within a desired range, or to a single setpoint. This is called “Dual Proportional Control”. Of course, a single relay in proportional pulse mode can be used to establish a high or low limit and will also reduce overshoot.

Proportional control is a popular alternative to the on/off control method. This method typically makes use of variable-rate metering pumps to reduce overshoot and improve precision. Establishing a proportional control scenario requires the selection of setpoint(s), deviation range(s) and maximum pulse rates.

Metering pumps are idle at and between setpoints. When a setpoint is exceeded, the pump begins delivering reagent at a rate proportional to the difference between the measurement value and the setpoint. The larger the difference, the faster the delivery. The programmed deviation value defines how quickly the maximum pulse rate is reached. Depending on the input requirements of the metering pump, proportional control can also be accomplished with scaleable 4 to 20 mA outputs instead of pulsing relays or open collectors.

Dual proportional pulse relay control

Open Collector Output

Many Signet instruments and sensors feature “Open Collector Outputs” for purposes of signal transmission, alarming, control signal output, etc. Although such outputs allow for a lot of wiring flexibility, care must be taken not to destroy the circuits via incorrect polarity, over-voltage, transients or current overload.

1. Function

Open Collector (“OC”) outputs are low powered, solid state switches. Although the term “Open Collector” stipulates the use of bipolar transistors (NPN-type or PNP-type) as a switch, nowadays Field Effect Transistors (FET or MOSFET) are used. Unlike electromechanical switches (e.g. push buttons or dry contact relays) these OC switches are very fast, use little power, are inexpensive, do not bounce and do not wear.

2. Sensor Wiring

A typical example of the need for high speed switching capability is the OC frequency output of Signet flow sensors like 3-2536 or 3-2540. Signal frequencies can reach several hundred pulses per second while voltage and current requirements are small enough, allowing the use of a transistor switch. For each output pulse this switch connects the signal output to the negative supply or ground terminal of the sensor and is therefore an “NPN” style output.

Do not exceed the absolute maximum voltage rating of the OC output as listed in the sensor specifications, normally 27 or 30 Volt, DC only. This includes changes to power line fluctuations, transients or power supply instability, otherwise damage to the OC will occur.

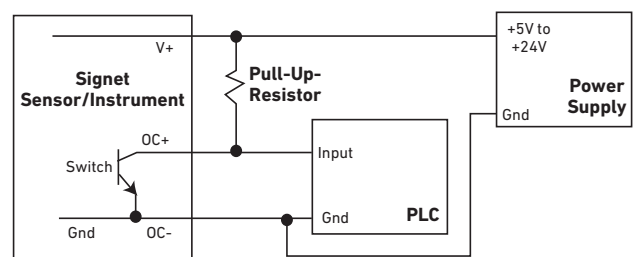

Please note that the voltage connected to the positive sensor supply (V+) must correspond to the required high-level PLC input voltage (i.e. if the high-input voltage of the PLC is 24 V, then the pull-up must be supplied with 24 V). If the input is “TTL-Level” or “CMOS-Level”, that means 5 V for high level, then the pull-up should not be connected with a supply higher than 5 V.

Below is an explanation of proper wiring and dimensioning of related circuit components. Please note that the following recommendations may or may not apply to other manufacturer’s equipment.

However, OCs are also more limited in terms of voltage and current rating as well as being polarized (i.e. they have a “plus” and “minus” terminal and thus DC only switching capability). They are less tolerant to overload abuse than electromechanical devices. Usually these switches have higher resistance and voltage drop.

Signet does not produce sensors with PNP style outputs (which connect the signal output internally to the positive supply terminal).

Most indicating instruments or control system inputs require a signal voltage of 0 to 5 V (TTL or CMOS logic levels) or 0 to 24 V. Therefore, Open Collector output circuits must be complemented with a “Pull-Up-Resistor” to function properly. Please see the following example diagram for wiring with a PLC input:

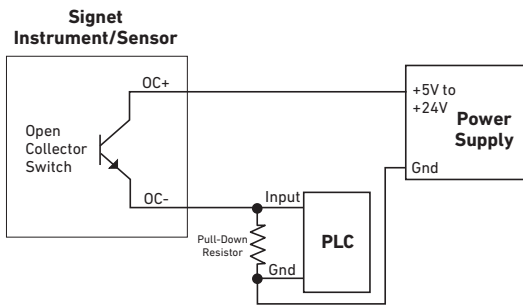

Open Collector Output (continued)

3. Instrument Output Wiring

Open collector control and alarm outputs on Signet instruments (i.e. SmartPro®, ProcessPro® or ProPoint® series) are electrically isolated from the instrument's power supply.

That means these can be used in the above mentioned NPN configuration as well as in PNP configuration, if required. Below are a few sample circuits:

- PLC Wiring "PNP" style

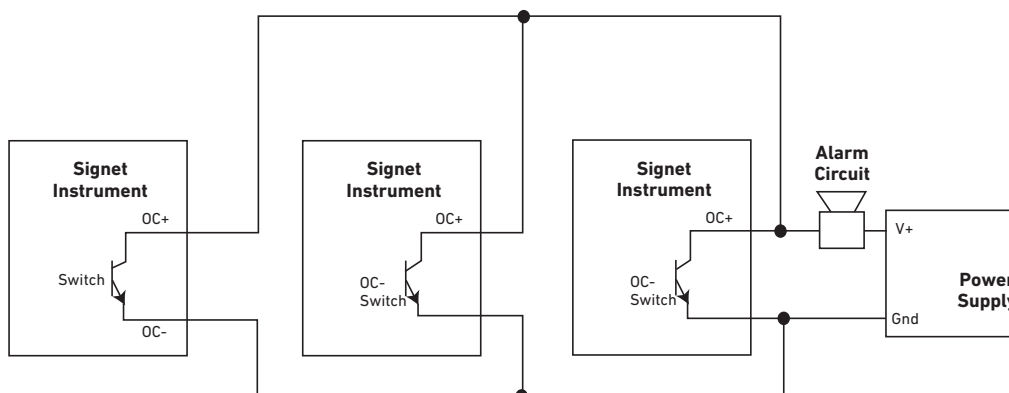

- PLC Wiring "NPN" style

- Alarm circuit or alarm lamp wiring to a single Signet instrument

- Alarm circuit or alarm lamp wiring to serve multiple Signet instruments
- Triggers the alarm if any one of the instruments open collector outputs are on.

Open Collector Output (continued)

4. Voltage and Current Limitation

As mentioned before, the supply voltage in the OC output circuit MUST be limited to the specified maximum OC voltage (see operating manual for specific instrument). The use of a quality regulated 5 V, 12 V or 24 V (depending on the application) power supply is recommended.

The current through the Open Collector switch must be limited. Typical OC outputs allow only for 10 to 50 mA switch current (please consult manual). Exceeding this current limit can burn out the OC output components immediately. Please see the following section on how to dimension the loads.

5. Load and Pull-Up/Down Resistor Considerations

By utilizing basic arithmetic and Ohm's law, one can determine the safe limits of load resistance. When the OC switch is closed, almost the entire supply voltage is applied to the load, (i.e. the pull-up or pull-down resistor,

the alarm horn input, a potential power relay coil or annunciator lamp). The resulting current through the load and through the OC switch, as well, can be calculated as:

$$(\text{Current}) = (\text{Supply Voltage})/(\text{Load Resistance})$$

- Example 1:

The supply voltage is 24 V and a pull-up-resistor of 10 k Ω is used. Current is $24/10,000 = 2.4$ mA

(If the OC current rating is 10 mA, then in this example, it would be considered safe.)

- Example 2:

The supply voltage is 12 V and a horn with a resistance of 100 Ω is used
Current is $12/100 = 120$ mA

(Even if the OC current rating is 50 mA, this load will damage the instrument)

6. Transient Protection

There are several "difficult" load cases that must be considered:

- Inductive loads:

These can be power relay or other solenoids, motors, alarm horn coils, etc. Such loads generate very high voltage spikes every time the load switches. If such a load is unavoidable, the use of transient suppression components, or Signet RC-filters (3-8050.396), or snubbers, wired parallel to the load is required. This is critical, as a single transient pulse may destroy the output.

- Capacitive loads:

This type of load should be rare but can occur if the load contains an internal power supply/regulator that is fed from the output circuit. In such a case, it must be assured that the in-rush current does not exceed the OC current rating.

- Incandescent lamps:

Such lamps have a very high start-up current until the filament glows and the current settles to the specified value. The use of incandescent lamps on an OC output is not recommended. An LED type annunciator should be used instead.

7. "Active High" and "Active Low" Setting

Depending on the desired function of the circuit attached to the OC output, it may be necessary to have the OC output switch turned "on" or "off" when the criteria for the activation of this output are met.

By default, Signet instruments are set to operate in "active low" mode. This means when the user-defined condition for the activation is met (e.g. exceeding of an alarm limit) the OC switch is turned "on".

If wired as standard "NPN-style" output (see previous page) the logic level of the attached control system or PLC input consequently becomes "low" logic level.

If a high input logic level is required for activation, it can be accomplished by changing the OC output function to "active high" in the menu system of the instrument. Most Signet instruments allow for this option.

8. Fail-Safe Behavior

No matter what the setting, most OC outputs of Signet instruments turn off when the instrument loses power. This must be taken into account when evaluating system failure consequences. If the system layout requires a "closed" or "on" condition for the output in case of power loss, a mechanical dry contact relay (NC contacts) must be used instead of the OC output.

Open Collector Output (continued)

Control Outputs

Many Signet products offer control outputs that can be categorized into three categories: Mechanical Relay, Solid-State Relay and Open Collector. Each control output offers benefits and limitations based on the application requirements. See below for comparisons.

Open Collector

Benefits:

- Longer life than a Mechanical Relay
- No moving parts
- Can switch DC voltage only (typically < 30 VDC)
- Faster ON/OFF switching capabilities than Mechanical Relays

Considerations:

- Can only be used with DC voltage
- Polarity very important when wiring
- Not recommended for use with inductive loads
- Lower voltage and current ratings than Mechanical Relays
- Typically should not apply current > 25 mA

Solid-State Relays

Benefits:

- Has isolated outputs (optically)
- Can switch DC voltage (typically > 30 VDC)
- Can switch AC voltage (typically > 42 VAC) 50 mA DC / 50 mA AC
- Longer life than a Mechanical Relay
- No moving parts
- Faster ON/OFF switching capabilities (Equal rise/fall times)

Considerations:

- Not recommended for use with:
 - Inductive loads (ex. Solenoid, Pumps)
- If using inductive loads, snubbers (RC Filter) can prevent relay damage
- Lower voltage and current ratings than Mechanical Relays

Mechanical Relays

Benefits:

- Can switch line voltage (typically > 120 to 240 VAC)
- Can switch DC voltage (typically < 30 VDC @ 5A)
- Has a large current rating (typically 5 A)
- Larger voltage and current ratings than Solid-State Relay and Open Collector Outputs

Considerations:

- Slower ON/OFF switching capabilities than Solid-State Relay and Open Collector Outputs
- Mechanical contacts can burn/wear over time
- Snubbers (RC Filter), Signet 3-8050.396, can prolong contact life

RC Filter

RC Filter kits are recommended when using a Signet transmitter or controller with mechanical relays, and/or the external relay module 3-8059 to switch on and off inductive loads. Signet RC filter kits provide protection and extend the life of the relay by preventing premature wearing of the relay contacts, usually caused by voltage/current arcing and line noises generated by the activation and deactivation of mechanical relays.

RC filter kit (3-8050.396) comes with two RC filter assemblies.

During the activation and deactivation of a relay, a spark can be generated on the surface of the relay contacts. This spark, over a period of time, melts the surface of the contacts which will prevent the contacts from making a physical connection.

Figure A is suitable for AC and DC applications.

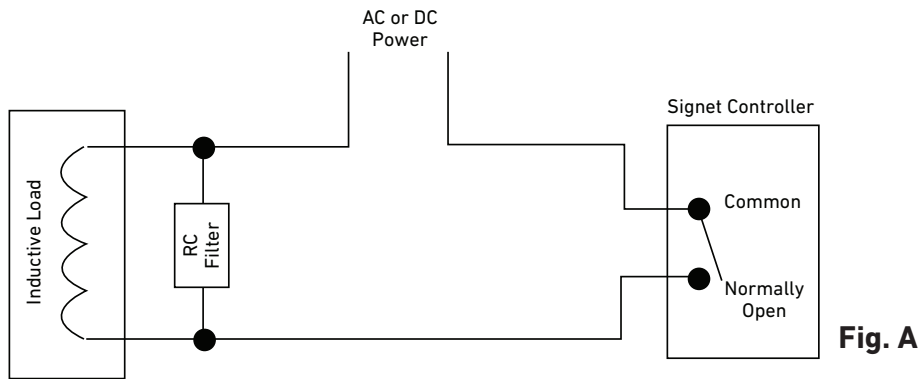

Fig. A

Figure B is also suitable for AC and DC applications. However, if this configuration is used with an AC power source, verify that the impedance of the load is less than the impedance of the RC filter; current leak through the filter may occur and cause the device to be constantly on.

- $R = 47 \Omega$
- $C = 0.01 \mu F$

Submersion Kit

How to use this guide

Use this step-by-step ordering guide to assemble your Submersion Kit.

The cost effective Submersion Kits are easily built by selecting a Signet instrument/junction box, pipe segments, adapter and sensor. Various pipe sizes and materials (PVC-U, PVC-C, PP and PVDF) are also available to suit your needs.

Customer Benefits

Professional, liquid tight, cost effective solution

Easy to build using standard Georg Fischer accessories

Modular design for easy shipping

Easy installation

Easy maintenance

Chemical resistance

Installation Tips

Use the universal mount junction box to adapt any mounting bracket.

Standpipe must be filled with water proof epoxy resin to seal against condensation build-up.

Transmitter

Mfr. Part No.	Code	Component	Description
3-8050	159 000 184	The Universal Mount Kit mounts a 9900 field mount instrument onto a wall, pipe, or tank. Includes: transmitter base, universal mounting plate and bracket.	<ul style="list-style-type: none"> • Use to mount transmitter, 3-9900-1
3-8050-1	159 000 753	The Universal Mount Junction Box contains two terminal blocks that enable cable extensions for pH, ORP, flow, temperature, pressure, and conductivity sensors/ electrodes. This kit mounts on a wall, pipe, or tank. Includes: top cover, transmitter base, universal mounting plate and bracket, liquid tight connector kit.	<ul style="list-style-type: none"> • Use if sensor wiring needs to be extended. Cable for Conductivity sensors should never exceed 30 m (100 ft)
3-8052	159 000 188	$\frac{3}{4}$ in. Integral Mount Kit is designed to mount a ProcessPro® field mount instrument directly on top of a conductivity/resistivity, temperature, or pressure or level sensor. Includes: transmitter base, sensor adaptor.	<ul style="list-style-type: none"> • Use to mount transmitter, 3-9900
3-9900.396	159 001 701	Angle Adjustment Adapter Kit	<ul style="list-style-type: none"> • Adjusts the mounting angle of the 3-9900 Transmitter and adds additional wiring clearance

pH/ORP

Mfr. Part No.	Code	Component	Description
3-8052-1	159 000 755	The Universal Mount Junction Box contains two terminal blocks that enable cable extensions for pH, ORP electronics or 2751. This kit mounts on a wall, pipe, or tank.	<ul style="list-style-type: none"> • Use if sensor wiring needs to be extended. Refer to manual for maximum cable lengths
3-8052-2 (pH/ORP)	159 000 754	The pH/ORP Universal Mount Junction Box contains two terminal blocks that enable cable extension of pH or ORP sensors. It features an EasyCal board for simple, push-button pH or ORP calibration. This kit mounts on a wall, pipe, or tank. Includes: top cover, transmitter base, universal mounting plate and bracket, liquid tight connector kit.	<ul style="list-style-type: none"> • Built-in EasyCal electronics • Digital (S³L) signal output to remote 3-8900 Multi-Parameter Controller or 3-9900 Transmitter • 4 to 20 mA signal output to PLC • Used with the 3-2751-3 or 3-2751-4 submersible smart sensor electronics

Conductivity/Resistivity

Mfr. Part No.	Code	Component	Description
3-2850-61 (Conductivity/Resistivity)	159 001 400	Universal mount junction box with sensor electronics, (S ³ L)	<ul style="list-style-type: none"> • Digital (S³L) signal output to remote 3-8900 Multi-Parameter Controller or 3-9900 Transmitter • Built-in EasyCal electronics
3-2850-62 (Conductivity/Resistivity)	159 001 401	Universal mount junction box with sensor electronics, 4 to 20 mA	<ul style="list-style-type: none"> • 4 to 20 mA signal output to PLC • Built-in EasyCal electronics
NONE	Go to Step 5.3 - Cable Gland + Reducer + Elbow		

3

Choose the correct pipe material based on Chemical Compatibility

- Verify the length of the assembly and add a union adapter () every 2 meters
- Recommended pipe size $d25 \leq 2m/d50 > 2m$
- If union/FKM component is not suitable, contact factory

Choose the correct electrode and sensor electronics

Hydrostatic Level

Choose the correct sensor by verifying the correct chemical compatibility, temperature, fluid density and requested output sign

Mfr. Part No.	Code	Component	Description
3-2250-11U-1	159 001 478	Hydrostatic level 0-700 mbar	Digital (S ³ L) output signal. Use with the 3-9900-1 Transmitter or 3-8900 Multi-Parameter Controller
3-2250-21U-1	159 001 482	Hydrostatic level 0-700 mbar	4 to 20 mA output (Blind)

Temperature - Choose the correct sensor by verifying the correct application temperature and requested output signal.

Mfr. Part No.	Code	Component	Description
3-2350-1	159 000 021	Temperature sensor	Digital (S ³ L) output signal. Use with the 3-9900-1 Transmitter or 3-8900 Multi-Parameter Controller
3-2350-3	159 000 920	Temperature sensor	4 to 20 mA output (Blind)

pH/ORP - Choose the correct sensor electronics or preamplifier based on sensor selection and the use of a transmitter. Bulb type electrodes are recommended for submersible application

Mfr. Part No.	Code	Component	Description
3-2751-3	159 001 806	Sensor Electronics for 3-8900 Multi-Parameter Controller and 3-9900 and 3-9950 Transmitter	Sensor Electronics ¾ inch ISO
3-2751-4	159 001 807	Sensor Electronics for 3-8900 Multi-Parameter Controller and 3-9900 and 3-9950 Transmitter	Sensor Electronics ¾ inch ISO

Choose the correct sensor by verifying the correct chemical compatibility, conductivity level, temperature and sensor glass (bulb or flat)

3-2724-01	159 001 546	pH Electrode, flat, Pt1000	Use with the 3-2751 Smart sensor electronics
3-2725-61	159 001 562	ORP electrode, flat	Use with all preamplifiers and electronics
3-2726-01	159 001 554	pH electrode, bulb, Pt1000	Use with the 3-2751 Smart sensor electronics
3-2734-00	159 001 774	pH Electrode, flat, Pt1000	Use with the 3-2751 Smart sensor electronics
3-2734-01	159 001 775	pH Electrode, flat, Pt1000	Use with the 3-2751 Smart sensor electronics
3-2734-HF-00	159 001 776	pH Electrode, flat, HF resistant	Use with the 3-2751 Smart sensor electronics
3-2734-HF-01	159 001 777	pH Electrode, flat, HF resistant	Use with the 3-2751 Smart sensor electronics
3-2736-00	159 001 778	pH electrode, bulb, Pt1000	Use with the 3-2751 Smart sensor electronics
3-2736-01	159 001 779	pH electrode, bulb, Pt1000	Use with the 3-2751 Smart sensor electronics

4

Choose the correct electrode and sensor electronics continued...

Mfr. Part No.	Code	Component	Description
3-2736-HF-00	159 001 780	pH Electrode, bulb, HF resistant	Use with the 3-2751 Smart sensor electronics
3-2736-HF-01	159 001 781	pH Electrode, bulb, HF resistant	Use with the 3-2751 Smart sensor electronics
3-2735-60	159 001 782	ORP electrode, flat, 10K	Use with all preamplifiers and electronics
3-2735-61	159 001 783	ORP electrode, flat, 10K	Use with all preamplifiers and electronics
3-2766-2	159 000 950	pH electrode, bulb, Pt1000	Use with the 3-2751 Smart sensor electronics
3-2767-1	159 000 952	ORP electrode, bulb	Use with all preamplifiers and electronics
3-2774-HT-C	159 001 795	pH electrode, flat, 3 KΩ	Use with the 3-2751 Smart sensor electronics
3-2776-1	159 000 960	pH electrode, bulb, Pt1000	Use with the 3-2751 Smart sensor electronics
3-2777	159 000 961	ORP electrode, bulb	Use with all preamplifiers and electronics

Applications requiring high temperature above 85° C, please contact factory.

Conductivity/Resistivity

Choose the correct preamplifier based on sensor selection and the use of a transmitter.

Mfr. Part No.	Code	Component	Description
* 3-2850-61	159 001 400	Sensor Electronics	Sends a digital (S ³ L) signal to 3-9900-1 Transmitter or 3-8900 Multi-Parameter Controller
* 3-2850-62	159 001 401	Sensor Electronics	4 to 20 mA output (Blind)

Choose the correct sensor by verifying the correct chemical compatibility (if SS is not suitable, Hastelloy-C, Titanium, Monel - Contact factory or email signet-specialproducts@georgfischer.com), conductivity level and temperature

3-2839-1V	159 001 810	Conductivity sensor, 0.01 cell	Application with conductivity levels 18.2 MΩ to 100 μS
3-2839-1VD	159 001 811	Conductivity sensor, 0.01 cell	Application with conductivity levels 18.2 MΩ to 100 μS
3-2840-1V	159 001 812	Conductivity sensor, 0.1 cell	Application with conductivity levels 1.0 μS to 1000 μS
3-2840-1VD	159 001 813	Conductivity sensor, 0.1 cell	Application with conductivity levels 1.0 μS to 1000 μS
3-2841-1V	159 001 814	Conductivity sensor, 1.0 cell	Application with conductivity levels 10 μS to 10,000 μS
3-2841-1VD	159 001 815	Conductivity sensor, 1.0 cell	Application with conductivity levels 10 μS to 10,000 μS
3-2842-1V	159 001 816	Conductivity sensor, 10 cell	Application with conductivity levels 100 μS to 200 mS
3-2842-1VD	159 001 817	Conductivity sensor, 10 cell	Application with conductivity levels 100 μS to 200 mS
3-2823-1	198 844 003	Conductivity sensor, 20 cell	Application with conductivity levels 200 μS to 400 mS

* Maximum sensor cable length 4.6 m (15 ft) when using the 3-2850-XX electronics

Product Retirements

Below is a list of retired products as well as their suitable replacement. Please contact your local Georg Fischer sales office for more information.

Retired Products				Replacement Products		
	Mfr. Part No.	Code	Description	Mfr. Part No.	Code	Description
2756-WT pH/ORP Electrode						
	3-2756-WT	159 000 834	Bulb pH, glass body, Pt1000	3-2756-WTP	159 001 390	Bulb pH, Plastic Electrode Wet-Tap, Pt1000 TC
	3-2756-WT-1	159 001 383	Bulb pH, glass body, 3KΩ Balco	3-2756-WTP-1	159 001 384	Bulb pH, Plastic Wet-Tap, 3K ohm TC
	3-2757-WT	159 000 835	ORP, glass body, 10 KΩ resistor	3-2757-WTP	159 001 391	Bulb ORP Plastic Electrode, Wet-Tap Pt1000 TC
2764-2767 pH/ORP Electrode						
	3-2764-3	159 000 945	Flat pH, 300Ω Balco	No direct replacement		
	3-2765-3	159 000 948	Flat ORP, 300Ω Balco			
	3-2766-3	159 000 951	Bulb pH, 300Ω Balco			
	3-2767-3	159 000 954	Bulb ORP, 300Ω Balco			
2774-2777 pH/ORP Electrode						
	3-2775-1	159 000 958	Flat ORP, No TC	No direct replacement		
	3-2777-1	159 000 962	ORP bulb, No TC			
2760 Connectors						
	3-2760-3	159 000 941	Submersible connector, 4.6 m, NPT threads	No direct replacement		
	3-2760-4	159 000 942	Submersible connector, 4.6 m, ISO threads			
	3-2760-31	159 001 369	In-line connector, 4.6 m, NPT threads			
	3-2760-41	159 001 370	In-line connector, 4.6 m, ISO threads			
2750 pH/ORP Sensor Electronics						
	3-2750-1	159 000 744	In-line	3-2751-1 or 2751-2	159 001 804	In-line with 4.6 m (15 ft) cable
	3-2750-2	159 000 745	In-line with EasyCal	3-2751-2	159 001 805	In-line with EasyCal
	3-2750-3	159 000 746	Submersible with 4.6 m (15 ft) cable	3-2751-3	159 001 806	Submersible with 4.6 m (15 ft) cable
	3-2750-4	159 000 744	Submersible with 4.6 m (15 ft) cable, ISO	3-2751-4	159 001 807	Submersible with 4.6 m (15 ft) cable, ISO
4630 Chlorine Analyzer System						
	3-4630-10	159 001 748	Chlorine sensor measures 0.02 to 2 ppm, no pH sensor	3-4630-11	159 001 749	Chlorine sensor measures 0.02 to 2 ppm, with pH sensor
	3-4630-20	159 001 691	Chlorine sensor measures 0.05 to 5 ppm, no pH sensor	3-4630-21	159 001 692	Chlorine sensor measures 0.05 to 5 ppm, with pH sensor
	3-4630-30	159 001 750	Chlorine sensor measures 0.1 to 20 ppm, no pH sensor	3-4630-31	159 001 751	Chlorine sensor measures 0.1 to 20 ppm, with pH sensor
4150 Turbidimeter						
	3-4150-2	159 001 597	Turbidity ISO 1000 NTU	3-4150-1	159 001 596	Turbidity EPA 1000 NTU
	3-4150-5	159 001 600	Turbidity EPA w/Auto Clean 1000 NTU	3-4150-3	159 001 598	Turbidity EPA w/Auto Clean 100 NTU
	3-4150-6	159 001 601	Turbidity ISO w/Auto Clean 1000 NTU	3-4150-4	159 001 599	Turbidity ISO w/Auto Clean 100 NTU

Glossary

4 to 20 mA: A standard analog signal used for the proportional representation of a measurement variable or process condition.

Absorb: To take up or receive by chemical or molecular action.

AC (Alternating Current): An electric current in which the flow reverses periodically. Compare direct current (DC).

Accumulator: See Totalizer

Accuracy: The ability of a measurement to match the actual value of the quantity being measured.

Acid: A corrosive liquid (usually in a solution) that dissolves metals and other materials. Technically, acidic material produces positive ions in solution. An acid is the opposite of a base and has a pH between 0 to 7. A given amount of an acid added to the same amount of a base neutralizes the base, producing water and a salt. Common vinegar, for example, is a weak solution of acetic acid.

Active Outputs: Current outputs that require no external power source to operate.

Adsorption: The clinging of molecules to the surface of particles; the process by which activated carbon removes contaminants from water.

Alkali: A bitter, caustic mineral often found in large beds in the desert. Alkalis are bases; two common examples are lye and ammonia.

Analog: A type of signal in which data is represented by continuously variable, measurable, physical quantities, such as current or voltage. 4 to 20 mA is a common analog signal, as opposed to Digital.

Base: A bitter, caustic liquid. Technically, a basic material produces negative ions in solution. A base is the opposite of an acid and has a pH of 7 to 14. A given amount of a base added to the same amount of an acid neutralizes the acid; water and a salt are produced. Alkalis are bases; ammonia is a common base.

Batch Control: The process of dispensing a precise volume of fluid repetitively or in conjunction with another process.

BCF: Bead and Crevice Free; a welding technique for plastic pipes that yields a weld surface suitable for high purity application requirements.

Bi-directional Flow: (1) All Signet flow sensors with a frequency output are bi-directional; the sensor will always have an output of "positive" flow no matter which direction the fluid is flowing in the pipe. (2) Flow sensors with 4 to 20 mA output can be set for uni- or bi-directional flow. Uni-directional flow indicates one direction of flow only, typically set as 4 mA equal to zero flow and 20 mA equal to the maximum flow rate required. Bi-directional flow indicates flow in both forward and reverse directions. Bi-directional flow can be set-up by making the 4 mA output equal to a negative number (for instance, -5 m/s) and the 20 mA output equal to a positive number (for instance, +5 m/s).

Blind Transmitter: Any device having 4 to 20 mA output without also having a local/permanent display.

Boolean: A logic system treating variables through the operators AND, OR, NOT, and XOR, where each operator can have one of two values, true or false.

Buffer: Typically a solution used as a calibration standard due to its ability to maintain a stable pH value.

Calibration: Systematic adjustment of the display and/or output of a measuring instrument for the purpose of conforming to a standard or actual value.

Caustic: Any strongly corrosive chemical substance, especially one that attacks organic matter. A caustic alkali is a metal hydroxide, especially that of an alkali metal; caustic soda is sodium hydroxide, and caustic potash is potassium hydroxide. Most inorganic acids, e.g., sulfuric acid, are caustic, especially when concentrated.

Cavitation: The formation and collapse of a gas pocket or bubble due to mechanical shearing of a fluid.

CE: Conformité Européene. A mark that is affixed to a product to designate that it is in full compliance with all applicable European Union legal requirements.

Cell Constant: 1) The distance between the two electrodes of a conductivity cell divided by their cross-sectional area. 2) A value associated with an effective measurement range used in the proper selection of conductivity cells for specific applications.

Glossary

Chlorine: A halogen element, a heavy, greenish-yellow, incombustible, water-soluble, poisonous gas, obtained chiefly by electrolysis of sodium chloride brine; used for water purification in the making of bleaching powder, and in the manufacture both of chemicals that do not contain chlorine and of those that do.

Condensation: The transformation of water vapor to liquid. Also, a chemical reaction in which two or more molecules combine, usually with the expulsion of water or some other substance.

Conductivity: The measure of the ability of a fluid to conduct an electrical current. In water, this ability is due to the presence of ionized substances in solution. Conductivity measurements usually include temperature compensation.

Corrosion: Material deterioration due to chemical attack.

Current (loop) Output: See 4 to 20 mA

DC (Direct Current): Electric current in which electrons flow in one direction only. Compare alternating current (AC).

Dead Band: The limits between which the input to an instrument can vary without causing a change to the instrument output. In relay operation: The difference between the increasing and decreasing readings when the switch is operated between set point and reset point. See also Hysteresis

DIN: Deutsches Institut für Normung e.V. DIN is a non-governmental organization established to promote the development of standardization and related activities in Germany and related markets with the goal of facilitating the international exchange of goods and services, and to developing cooperation in the spheres of intellectual, scientific, technological and economic activity. Through the European standards organizations CEN and CENELEC, DIN also presents the German view in the development of the European standards that are critical to completion of the single European market.

DN: Diametre Nominal; Term used by DIN standards for the inside diameter of pipes.

Deionization: A purification process by which ionized particles are removed from water.

Desalination: Processes that remove salt from water, such as reverse osmosis, ion exchange, distillation and evaporation.

Desiccant: A granular, porous, silica based material that has the ability to absorb moisture. Desiccant is used to control humidity in a closed environment.

Desiccant Silica Gel: Is a granular, porous form of silica made synthetically from sodium silicate. Despite the name, silica gel is a solid. Silica gel is most commonly encountered in everyday life as beads packed in a semi-permeable. In this form, it is used as a desiccant to control local humidity and is used in industry for many purposes.

Diffusion: An intermingling of the molecules of liquids or gases.

Digital: A type of signal in which data is represented in numerical form.

Dry Contact Closure: Relay. The contacts of a mechanical switch.

Dry Contact Relay (DCR): An electromechanical device used to switch external power.

DryLoc[®]: Georg Fischer Signet LLC trade name and patented design for a versatile and robust connector scheme between sensor electronics and electrodes.

Dual Proportional Control: See relay control discussion on page 417 (also applies to transistor-type outputs).

EasyCal: The calibration routine in Signet pH and ORP systems in which standard buffers or test solutions are automatically recognized by the instrument.

Efficiency: For pH and ORP electrodes, the percent of theoretical slope.

Effluent: Liquid flowing out of a system, such as a discharge of liquid waste from a factory or water leaving a sewage treatment plant.

Electrode: 1) Primary detection device, typically analytical, requiring or benefiting from some secondary conditioning circuitry (e.g., pH and ORP electrodes). 2) Sensor.

Emissions: The potentially disruptive electromagnetic frequencies generated by an electronic device. Various standards defining allowable limits have been established.

Empty Pipe Detection: The empty pipe detection in Signet products features a zero flow output when the sensors are not completely wetted. This does not indicate an empty pipe, but rather a pipe that is not completely full.

Glossary

EP: Copolymer of Ethylene and Propylene or terpolymer with butadiene. Typically features good weather and chemical resistance. Typically used with diluted acids and alkalis, detergents, alcohols, steam and silicone oils.

EPDM: Ethylene Propylene Copolymer; Same as EP, EPR, and EPM.

EPM: Ethylene Propylene Copolymer; Same as EP and EPR, and EPDM.

EPR: Ethylene Propylene Copolymer; Same as EP, EPM, and EPDM.

FFKM : Also known as FFKM, trade names include or Kalrez (trademark) or Chemraz (registered trademark). Typical applications for this material include highly aggressive chemical processing, semiconductor wafer processing, pharmaceutical, oil and gas recovery, aerospace and petroleum.

Fluoroloy: Product of Saint Gobain

Formazin: A very stable suspended solid that remains suspended in solution with water indefinitely. The suspended solid in Formazin can be hydrazine sulfate, $(\text{NH}_2)_2(\text{H}_2\text{SO}_4)$ or hexa-methylene-tetramine in water.

FKM: FKM is an elastomer, better known as Viton. *Viton® is a registered trademark of E. I. du Pont de Nemours and Company*

Frequency: The number of repetitions that occur in one second. Frequency can be used to describe electrical quantities, sound waves, mechanical vibrations, etc. Frequency is measured in units of Hertz (Hz). In Signet flow sensors, the output is defined in terms of frequency and used to calculate Flow Rate.

Formazin Nephelometric Unit (FNU): A unit of turbidity based upon a comparison of scattered light intensity by a sample under defined conditions with the intensity of light scattered by a standard reference Formazin suspension. The higher the intensity of scattered light, the greater is the turbidity. The design of the nephelometer is specified in the method. A standard suspension of Formazin is used for calibration.

HART®

HART is a bi-directional communication protocol that provides data access between intelligent field instruments and host systems. A host can be any software application from a technician's hand-held device or laptop to a plant's process control, asset management, safety or other system using any control platform.

Hot-Tap: A mechanical assembly that allows the insertion and removal of a sensor or electrode without the need for system shutdown, and initial installation may be performed under pressurized conditions. Similar to Wet-Tap.

Hysteresis: In relay Setpoint programming, the difference between the activation point and the release point. See also Deadband.

Impedance: A measure of the apparent resistance posed by an electrical circuit to an alternating current (AC).

Immunity: Ability of a device to function without disruption in the presence of electromagnetic interference.

Insertion Flow Sensor: A type of flow sensor that installs through a hole in the wall of a pipe and converts a local velocity measurement into a calculation of the flow rate in the pipe. Usually used in comparison to "full bore" or "full line" flow sensor.

Intrinsically Safe: Term used to identify any device, instrument or component that will not produce any spark or thermal effects under any conditions that are normal or abnormal that will ignite a specified gas mixture. Electrical and thermal energy limits are at levels incapable of causing ignition. It is common practice to use external barriers with intrinsically safe installations.

Ion: An electrically charged atom or group of atoms.

IP - Ingress Protection: Ingress Protection (IP) ratings are defined in international standard IEC 60529. They are used to define levels of sealing effectiveness of electrical enclosures against intrusion from foreign bodies (tools, dirt etc) and moisture.

IR: Infrared, refers to a welding technique offered within the range of SYGEF® HP products.

IR - Infrared Light: Light whose wave length is just below the light sensitivity of the human eye.

ISO: International Organization for Standardization: A voluntary organization that creates international standards, including the standards for computers and communications. The American National Standards Institute, ANSI is a member of ISO.

Glossary

ISO 14001: International Organization for Standardization environmental standard.

ISO 9001: International Organization for Standardization quality standard.

Isolated/Isolation: Electrical separation between two or more circuits used to prevent measuring errors, ground loops, or a shock hazard.

K-Factor: In Signet Flow sensors, the number of pulses generated by the sensor for each unit of volume that passes by the sensor. Usually published in pulses per gallon and pulses per liter.

Linearity: The extent to which an output (response) is strictly proportional to an input (stimulus).

Loop: In electricity, a complete circuit. Usually used in reference to a 4 to 20 mA loop, an output signal used to control valves, actuators etc.

Loop Impedance: The maximum allowable total electrical resistance of all devices, including wiring, connected to any electrical loop; expressed in Ohms at a specified voltage level, i.e.; 600 Ω @ 12 VDC.

Loop Output: An analog output signal, usually 4 to 20 mA.

Loop Powered: In Signet products, any instrument that derives operating power from a 4 to 20 mA loop.

Magmeter: Electromagnetic flowmeter.

Metalex: Product name of fixed insertion metal paddlewheel flow sensors manufactured by Georg Fischer Signet LLC

Mho: The unit of conductance such that a constant voltage of one volt between its ends produces a current of one ampere in the conductor.

Mini-Tap: Stainless steel installation fittings for use with Metalex flow sensors.

NEMA Ratings: National Electrical Manufacturer Association (NEMA) Ratings define the types of environments in which an electrical enclosure can be used. Ratings signify a fixed enclosure's ability to withstand certain environmental conditions such as external icing, corrosive materials, oil immersion, dust, water, etc.

NIST: National Institute of Standards and Technology.

Non-isolated: Two or more electrical circuits sharing a common ground. When separated by distance or connected to additional circuitry there is increased probability for measurement errors due to ground loops.

Nephelometric Turbidity Unit (NTU): A unit of measure used when comparing the light scattered by a liquid media to the light scattered by a known concentration Formazin Polymer. This unit of measure is recognized as a measure of the optical clarity of an aqueous sample. NTU is the accepted unit of measurement for turbidity.

Ohm: The unit of measure for electrical resistance. A resistance of 1 ohm will pass 1 ampere of current when a voltage of 1 volt is applied.

OHSAS 18001: Occupational Health and Safety Assessment Series – Published by BSI, the National Standards Body of the UK, this is an international group of standards and guidelines dedicated to occupational health and safety.

Open Collector Output: An NPN transistor or FET output generally used to pull a signal from high to low. Device used for frequency, pulse, and alarm outputs.

Operating Pressure: Maximum vapor pressure from process

Operating Temperature: The temperature at which a product is capable of operating; usually a minimum and maximum value.

ORP (Oxidation Reduction Potential): A method of measuring the degree of completion of a chemical reaction by detecting the ratio of ions in the reduced form to those in the oxidized form as a variation in electrical potential measured by an ORP electrode.

Paddlewheel: A type of insertion flow sensor (pioneered by Georg Fischer Signet LLC) that utilizes a bladed rotor to engage the fluid flowing in a pipe. The spinning rotor produces a frequency output directly proportional to the fluid velocity.

Passive Outputs: Current outputs that require external power to operate.

Glossary

PBT: PolyButylene Terephthalate: A semi-crystalline polymer, combining good strength and stiffness with low moisture absorption, exceptional thermal stability, excellent electrical insulation properties, outstanding dimensional stability and resistance to the effects of a wide range of chemicals, solvents, and oils.

PEEK®: PolyEtherEtherKetone; an engineering thermoplastic with excellent chemical and water resistance. In Signet products, the yellow housing in ProcessPro field-mount instruments.

Percent Rejection: An indicator of RO system efficiency and membrane condition. Defined as one minus the ratio of the conductivity of RO product water to feed water, expressed as a percentage, and representing the extent to which incoming contaminants were rejected by the system.

pH: A measure of the acidity or alkalinity of a solution, numerically equal to 7 for neutral solutions, increasing with increasing alkalinity and decreasing with increasing acidity. The pH scale commonly in use ranges from 0 to 14.

Polypropylene (PP): PP is a polymer of ethylene with an isotactic arrangement of methyl groups.

Preamplifier: A device used typically to protect the relatively weak output signals of pH and ORP electrodes from the wide variety of electromagnetic interference common in most industrial environments.

ProcessPro®: Signet product name for a group of instruments characterized by a basic 4 to 20 mA Loop output, for the measurement of Flow, pH/ORP, Conductivity/Resistivity, Level, Pressure and Temperature.

PROFIBUS and PROFINET International (PI): PROFIBUS International (PI) is an independent organization responsible for the PROFIBUS protocols. PROFIBUS is standardized by the International Electrotechnical Commission (IEC) as IEC 61158. PI, through its regional associations, competence centers, training centers and test labs ensure high quality products and devices that implement the PROFIBUS standards.

Proof Pressure: Maximum water or hydraulic pressure.

ProPoint®: Signet product name for a group of panel mount instruments for the measurement of Flow, Batch, pH/ORP, Conductivity/Resistivity, Salinity and others. Characterized by a unique analog and digital display.

Proportional Pulse: In Signet products, an operating mode for relays and open-collector outputs that varies the frequency of the pulse in direct proportion to input variations.

PTFE: Polytetrafluoroethylene, also known as TFE.

Pull-up resistor: A resistor needed to obtain the high-level voltage signal in a transistor-type output circuit.

PWM: Pulse Width Modulation; In Signet products, an operating mode for relays and open-collector outputs characterized by varying the time that a pulse is "on" versus the time it is "off". Also, a method of digitally encoding analog signal levels.

Quinhydrone: A crystalline powder typically added to pH 4 and 7 buffers for the purpose of producing standard solutions used in the calibration of ORP measuring systems.

RC Filter: A resistive-capacitive device, often referred to as a "snubber", designed to protect instrumentation and relay contacts by capturing the voltage spikes resulting from the switching of large inductive loads such as solenoids and motor starters, etc.

REDOX: Reduction/Oxidation; Same as ORP.

Relative Humidity: The amount of moisture in the air as compared with the maximum amount that the air could contain at the same temperature, expressed as a percentage.

Relay: An electromechanical switch.

Repeatability: The extent to which an output (response) repeatedly corresponds to identical input (stimulus) during dynamic conditions.

Resistivity: The inverse of conductivity (1/conductivity).

Reverse Osmosis: A process that allows the removal of particles as small as ions from a solution. The most common use for reverse osmosis is in purifying water. It is used to produce water that meets the most demanding specifications that are currently in place.

Reynolds Number: A dimensionless quantity associated with the smoothness of flow of a fluid. At low velocities fluid flow is smooth, or laminar, and the fluid can be pictured as a series of parallel layers, or lamina, moving at different velocities. The fluid friction between these layers gives rise to viscosity. As the fluid flows more rapidly, it reaches a velocity, known as the critical velocity, at which the motion changes from laminar to turbulent, with the formation of eddy currents and vortices that disturb the flow. Continued...

Glossary

Reynolds Number continued:

The formula can be stated as:

$$R = dv/\mu \text{ where } d \text{ is inside diameter,} \\ v \text{ is velocity and } \mu \text{ is viscosity.}$$

In general,

- $R < 2000$ = Laminar Flow
- $R > 2000 < 4500$ = Transitional (Indeterminate)
- $R > 4500$ = Fully Developed & Turbulent (most flow sensors operate best in turbulent flow)

Rotor-X: Family trade name of the original plastic paddlewheel flow sensors.

Ryton®: Trade name for Polyphenylene Sulfide or PPS. Other trade names include Fortron®, Tedar®, Supec®, and Tedur® (all registered trademarks)

(S³L): Acronym for Signet Sensor Serial Link; a digital communication method between Signet sensors and host instruments.

SafeLoc™: Name coined by Georg Fischer Signet LLC to define the unique locking mechanism used in the Signet 3719 pH Wet-tap assembly.

Salinity: A measurement of dissolved salt concentration, as in seawater, typically expressed in parts per thousand (ppt).

Sensor: 1) A primary detection device typically providing direct input to a measurement instrument (i.e., paddlewheel flow sensor). 2) The combination of an electrode and some secondary conditioning circuitry (i.e., pH electrode and preamplifier). 3) Electrode.

Signet: Model name of fluid measurement sensors and instruments marketed under the Georg Fischer Piping Systems brand.

Sleeved Rotor: An accessory rotor featuring a self-lubricating mechanical sleeve that replaces the standard liquid bearing of Rotor-X paddlewheel flow sensors. Sleeved rotors will extend the maintenance interval in applications known to produce premature rotor wear, such as those involving abrasive liquids.

SmartPro®: Signet product name for a new family of instruments

Specific Gravity: Ratio of the mass of a body to the mass of an equal body of volume of water at 4 °C, or some other specified temperature.

Suspended Solids: Particulate suspended (as opposed to being dissolved) and typically creating turbid, cloudy conditions in liquid.

SSR: Solid-state relay

TDS: Total dissolved solids

Totalizer: In flow instrumentation, a permanent or resettable counter for volume such as gallons or tens of gallons, etc.

Transmitter (two-wire): A device that converts an electrode or sensor input to a 4 to 20 mA output using the same two wires for signal transmission as for system power.

Turbidity: The reduction of transparency of a liquid caused by the presence of undissolved matter (ISO 7027 Definition of Turbidity).

Turndown Ratio: Dynamic response characteristic. The ratio of a sensor's maximum measurement range to its minimum measurement range.

UHMW Polyethylene: Ultra High Molecular Weight polyethylene. Very good chemical resistance of corrosives; very good stress cracking resistance (with the exception of strong oxidizing acids at elevated temperatures).

UL Type Ratings: Underwriters Laboratories Type Ratings are based on similar application descriptions and expected performance as NEMA Rating, but UL requires enclosure testing and site inspections.

Viscosity: The internal friction of a fluid, caused by molecular attraction, which makes it resist a tendency to flow.

Voltage (output): A standard analog signal (0 to 5 or 0 to 10 VDC for Signet products) used for the proportional representation of a measurement variable or process condition.

Weldolet: A weld-on branch connection for metal pipe typically used as an installation fitting for insertion-style sensors or electrodes.

Wet-Tap: A mechanical assembly that, after initial installation into a non-pressurized system, allows the insertion and removal of a sensor or electrode without the need for system shutdown. Similar to Hot-Tap.

White Light: The combined light whose wave lengths are all within the range of sensitivity of the human eye.

Window (Relay Module): An out-of-range alarm scenario that allows a single relay to be triggered by either a high or a low process condition. For example, a relay in window mode can be programmed to trigger if a pH value in a final effluent tank drops below 6.0 or rises above 8.5.

Services & solutions in all project phases

When moving from metal to plastic and increasing the use of those materials, their benefits are clear: low material weight, corrosion and chemical resistance, low total cost of installation and long life expectancy are just a few.

At GF, we have over 60 years of plastics know-how, and can offer you full support to meet your needs in designing, installing and commissioning plastic systems.

Planning

Specifications & tenders

Efficiency & innovation from beginning

Our experts support you with practical solutions for your specific applications.

Tendering

Project preparation

Good preparation reduces the rework

Equipped with the right know-how you can reduce the risk of faulty design and construction work.

Preparation

Material, ordering & delivery

From plan to implementation

We will check with you the feasibility of individual details and support you in all the planning phases.

Implementation

Execution of project

Security and competence on site

We accompany you for a smooth and compliant installation.

Commissioning & Operation

Testing & assessment

Security and competence on site

We will confirm the proper and professional execution with professional testing and analysis.

Centers of excellence

Competent support for you

Competent support offered by all GF sales companies and our Centers of Excellence (CoE)

-  Technical support
-  Chemical resistance
-  Training courses
-  On-site training
-  CAD library
-  Online and mobile calculation tools
-  Technical manual
-  Customizing

+ Easy access support

Quick, reliable and competent service is as important as a comprehensive product offering

We ensure that our staff in all countries has state-of-the-art knowledge of products, applications and technology. As a result, our local GF automation specialists can support you professionally in choosing the right products and defining a system which truly satisfies your needs, in addition to commissioning and after-sales service. Furthermore, GF is setting up a global network of centers of excellence (CoE) for automation where dedicated teams for sales, service and automation training are available to you.

+ Value Added Services

From planning support to implementation – our specialists are always close by

As a leading provider of piping systems in plastic and metal, we offer our customers not only reliable products, but also a large package of services. Our support ranges from a comprehensive technical manual or the extensive CAD library to an international team of experts, who work closely together with local sales companies. And when it comes to implementing a project, our customers additionally benefit from a wide range of training courses, either on site or in our modern training centers worldwide.

Worldwide at home

Our sales companies and representatives ensure local customer support in over 100 countries.
